I have physical scars from past surgeries, however, I have emotional scars as well. They were buried deep inside (hidden). It wasn't until my mother died was I able to "catch my breath" and to make sense of or process the emotional pain I had endured due to her prescription drug addiction, resulting in my own addictions.

Turkey's Evolving Dynamics Macmillan Higher Education
The onslaught of neoliberalism, austerity measures and cuts, impact of climate change, protracted conflicts and ongoing refugee crisis, rise of far right and populist movements have all negatively impacted on disability. Yet, disabled people and their allies are fighting back and we urgently need to understand how, where and what they are doing, what they feel their challenges are and what their future needs will be. This comprehensive handbook emphasizes the importance of everyday disability activism and how activists across the world bring together a wide range of activism tactics and strategies. It also challenges the activist movements, transnational and emancipatory politics, as well as providing future directions for disability activism. With contributions from senior and emerging disability activists, academics, students and practitioners from around the globe, this handbook covers the following broad themes: • Contextualising disability activism in global activism • Neoliberalism and austerity in the global North • Rights, embodied resistance and disability activism • Belonging, identity and values: how to create diverse coalitions for rights • Reclaiming social positions, places and spaces • Social media, support and activism • Campus activism in higher education • Inclusive pedagogies, evidence and activist practices • Enabling human rights and policy • Challenges facing disability activism
The Routledge Handbook of Disability Activism provides disability activists, students, academics, practitioners, development partners and policy makers with an authoritative framework for disability activism.

This Open Access book explores heritage conservation ethics of post conflict and provides an important historical record of the possible reconstruction of the Bamiyan Buddha statues, which was inscribed in the UNESCO World Heritage List in Danger in 2003 as "Cultural Landscape and Archaeological Remains of the Bamiyan Valley". With the condition that most surface of the original fragments of the Buddha statues were lost due to acts of deliberate destruction, this publication explores a reference point for conservation practitioners and policy makers around the world as they consider how to respond to on-going acts of destruction of cultural heritage. Whilst there has been an emerging debate to the ethics and nature of heritage reconstruction, this volume provides a plethora of ideas and approaches concerning the future treatment of the Bamiyan Buddha statues. It also addresses a number of fundamental questions on potential heritage reconstruction: how it will be done; who will decide; and what it should be done for. Moreover when it comes to the inscribed World Heritage properties, how can reconstructed heritage using non-original materials be considered to retain authenticity? With a view to serving as a precedent for potential decisions taken elsewhere in the world for cultural properties impacted by acts of violence and destruction, this volume introduces academic researches, experiences and observations of heritage conservation theory and practice of heritage reconstruction. It also addresses the issue not merely from the point of a material conservation philosophy but within the context of holistic strategies for the protection of human rights and promotion of peace building.

This book provides clear guidance as to which neuroradiological findings in ill or injured patients should be immediately communicated by radiologists and trainees to the emergency room and referring physicians in order to facilitate key decisions and eliminate preventable errors. It offers a practical and illustrative approach that identifies what to look for and how to report it and describes the required follow-up and the most common differential diagnoses of the main critical findings in neuroradiology. The book is distinctive in being written from a

"critical findings perspective", which makes its content more practical and memorable than that of a standard Emergency Neuroradiology textbook. It also illustrates the value of developing algorithmic approaches to report and communicate critical findings based on lists. While the book will appeal to a broad and variable audience, it is especially addressed to radiology training programs and will be a "must read" for residents and fellows in training.

This volume constitutes the proceedings of the 12th International Conference on Social Informatics, SocInfo 2020, held in Pisa, Italy, in October 2020. The 30 full and 3 short papers presented in these proceedings were carefully reviewed and selected from 99 submissions. The papers presented in this volume cover a broad range of topics, ranging from works that ground information-system design on social concepts, to papers that analyze complex social systems using computational methods, or explore socio-technical systems using social sciences methods.

Shaping the Iraq Inheritance Springer Nature

Brand touchpoints are used to reinforce the basic premise of branding, which is to distinguish brands from their competitors and remain memorable, ultimately keeping customers resolute in their allegiance. Information related through brand touchpoints increases brand familiarity, contributes to a brand's value, improves attitudes towards a brand, and in general is essential to maintain an ongoing relationship with consumers. Given the role of brand touchpoints, a look at contemporary issues is warranted. Brand Touchpoints is a collection of chapters by academics, practitioners and designers on the current evolution of brand communication. The book looks at existing issues in the marketplace and ways to influence the branding process. First, the changing role of brand touchpoints is reviewed in terms of the move from physical assets such as stores, trucks, and outdoor billboards to digital applications. A foundational sense of how consumers develop inferences surrounding brand touchpoints is then explored. Following this, prescriptive models for building brands to enhance the effectiveness of brand touchpoints are proposed. Then the ability of tangible touchpoints such as product

design, packaging, and other tangible aspects of the brand to inform macro branding is reviewed. A case is made for more research on multisensory aspects of a brand. Chapters in the final section of the book explore brand touchpoints as it influences microtrends of prosocial consumers, children and ardent sports fans. To conclude, novel linkages in brand literature that set up an agenda for future research as it relates to consumer culture is discussed. The diverse set of chapters in this book offer a well-timed, in-depth summary of the various academic literature and industry phenomenon. Chapters are contributed by leading academic and industry experts which include: Chris Allen, University of Cincinnati; Clarinda Rodrigues, Linnaeus University; Claudio Alvarez, Baylor University; Conor Henderson, University of Oregon; Dominic Walsh, Landor Associates; Doug Ewing, Bowling Green State University; Drew Boyd, University of Cincinnati; Frank R. Kardes, University of Cincinnati; Frank Veltri, University of Oregon; Kathryn Mercurio, University of Oregon; Lars Bergkvist, Zayed University; Marc Mazodier, Zayed University; Matt Carcieri, The Jim Stengel Company; Maureen Morrin, Temple University; Peter Chamberlain, University of Cincinnati; Remi Trudel, Boston University; Sara Baskentli, City University of New York; Susan P. Fundamentals of Sport Management Edward Elgar Publishing
This book looks at why it's so difficult to create 'the rule of law' in post-conflict societies such as Iraq and Afghanistan, and offers critical insights into how policy-makers and field-workers can improve future rule of law efforts. A must-read for policy-makers, field-workers, journalists and students trying to make sense of the international community's problems in Iraq and elsewhere, this book shows how a narrow focus on building institutions such as courts and legislatures misses the more complex cultural issues that affect societal commitment to the values associated with the rule of law. The authors place the rule of law in context, showing the interconnectedness between the rule of law and other post-conflict priorities, such as reestablishing security. The authors outline a pragmatic, synergistic approach to the rule of law which promises to reinvigorate debates about transitions to democracy and post-conflict reconstruction.

Agricultural biomass is abundant worldwide and it can be considered as alternative source of renewable and sustainable materials which can be used as potential materials for different applications. Despite this enormous production of agricultural biomass, only a small fraction of the total biomass is utilized for different applications. Industry must be prepared to take advantage of the situation and utilize the available biomass in the best possible manner. Agricultural biomass such as natural fibres has been successfully investigated as a great potential to be used as a renewable and sustainable materials for the production of composite materials. Natural fibres offer excellent specific properties and have potential as outstanding reinforcing fillers in the matrix and can be used as an alternative material for biocomposites, hybrid composites, pulp, and paper industries. Natural fibre based polymer composites made of jute, oil palm, flex, hemp, kenaf have a low market cost, attractive with respect to global sustainability and find increasing commercial use in different applications. Agricultural biomass based composites find applications in a number of fields viz., automotive industry and construction industry. Future research on agricultural biomass-natural fibre based composites should not only be limited to its automotive applications but can be explored for its application in aircraft components, construction industry, rural housing and biomedical applications. In this book we will cover the chemical, physical, thermal, electrical, and biodegradability properties of agricultural biomass based composite materials and its different potential applications. The main goal of this volume is to familiarize researchers, scientists and engineers with the unique research opportunities and potentials of agricultural biomass based materials. Dynamics of Technological Change Springer Science & Business Media

Technology is not an end in itself, but a way of satisfying human wants. It shows us how to solve the age-old economic problem of surviving and prospering in a hard world. But to optimize the

benefits of technological advance requires an understanding of how it happens. The purpose of this book is to provide some of that understanding. The subject is so enormous and so intertwined with every human activity that a small selection of it, and that from a special viewpoint, is inevitable. The selection of subject matter has been, of course, conditioned by what interests me and is somewhat heterogeneous. However, it is connected by two major themes. The first is that it emphasizes the dynamic nature of technology, in the sense that it must be approached as a process evolving in time that can often be described in quantitative terms. The second is that I have chosen topics that I believe are essential for a strategic sense of how to plan for, execute, and respond to technological change. These two themes complement each other because the strategic sense requires an appreciation of the dynamics and the dynamics naturally lead to a consideration of how to deal with technology so that it can be used to achieve human objectives. The unifying thought behind the book is that technological change has a systemic as well as an idiosyncratic aspect.

Coral Reefs of the Gulf: Adaptation to Climatic Extremes is a complete review and reference for scientists, engineers and students concerned with the geology, biology or engineering aspects of coral reefs in the Middle East. It provides for the first time a complete review of both the geology and biology of all extant coral areas in the Gulf, the water body between Iran and the Arabian Peninsula. In summer, this area is the hottest sea with abundant coral growth on earth and already today exhibits a temperature that is predicted to occur across the tropical ocean in 2100. Thus, by studying the Gulf today, much can be learned about tomorrow's world and the capability of coral reefs to adapt to climatic extremes. This volume provides the most authoritative and up-to-date review of the coral reefs in the Gulf. It can be used as a volume of general reference or as a textbook treating recent coral reefs. Written by local and international experts, the text is richly illustrated and will remain a standard reference for the region for decades to come. Contributions stretch from climatology through geology, biology, ecological modelling and fisheries science to practical conservation aspects. The book is useful for the technical expert and casual reader alike.

This book presents a comprehensive study of all important aspects of tribology. It covers issues and their remedies adopted by researchers working on automobile systems. The book is broadly divided in to three sections, viz. (i) new materials for automotive applications, (ii) new lubricants for automotive applications, and (iii) impact of surface morphologies for automotive applications. The rationale for this division is to provide a comprehensive and categorical review of the developments in automotive tribology. The book covers tribological aspects of engines, and also discusses influence of new materials, such as natural fibers, metal foam materials, natural fiber reinforced polymer composites, carbon fiber/silicon

nitride polymer composites and aluminium matrix composites. The book also looks at grease lubrication, effectiveness and sustainability of solid/liquid additives in lubrication, and usage of biolubricants. In the last section the book focuses on brake pad materials, shot peening method, surface texturing, magnetic rheological fluid for smart automobile brake and clutch systems, and application of tribology in automobile systems. This book will be of interest to students, researchers, and professionals from the automotive industry.

Agricultural Biomass Based Potential Materials John Wiley & Sons Soccer is the world's favorite pastime, a passion for billions around the globe. In the United States, however, the sport is a distant also-ran behind football, baseball, basketball, and hockey. Why is America an exception? And why, despite America's leading role in popular culture, does most of the world ignore American sports in return? Offside is the first book to explain these peculiarities, taking us on a thoughtful and engaging tour of America's sports culture and connecting it with other fundamental

American exceptionalisms. In so doing, it offers a comparative analysis of sports cultures in the industrial societies of North America and Europe. The authors argue that when sports culture developed in the late nineteenth and early twentieth centuries, nativism and nationalism were shaping a distinctly American self-image that clashed with the non-American sport of soccer. Baseball and football crowded out the game. Then poor leadership, among other factors, prevented soccer from competing with basketball and hockey as they grew. By the 1920s, the United States was contentedly isolated from what was fast becoming an international obsession. The book compares soccer's American history to that of the major sports that did catch on. It covers recent developments, including the hoopla surrounding the 1994 soccer World Cup in America, the creation of yet another professional soccer league, and American women's global preeminence in the sport. It concludes by considering the impact of soccer's growing popularity as a recreation, and what the future of sports culture in the country might say about U.S. exceptionalism in general.
