one of the fastest growing...Data Communications and Networking - Behrouz A. Forouzan ...Data communications refers to the transmission of this digital data between two or more computers and a computer network or data network is a telecommunications network that allows computers to exchange data. The physical connection between networked computing devices is established using either cable media or wireless

media. Networking and Communication
A computer network is a set of devices connected through links. A node can be computer, printer, or any other device capable of sending or receiving the data. The links connecting the nodes are known as communication channels. Computer Network uses distributed processing in which task is divided among several computers. Computer Network Tutorial - javatpoint
Data communications (DC) is the process of using

computing and communication technologies to transfer data from one place to another, or between participating parties. DC enables the movement of electronic or digital data between two or more network nodes, regardless of geographical location, technological medium or data contents. What is Data Communications (DC)? - Definition from Techopedia
Network communication is discussed in terms of availability of resources, partners to communicate

with, and data synchronization.
Presentation: The presentation layer is responsible for mapping resources and creating context. It is used to translate lower level networking data into data that applications expect to see. An Introduction to Networking Terminology, Interfaces, and ... This Portion of Data Communication and Networking contains more frequently asked MCQs (Multiple Choice Questions and Answers) / Objective Type Questions

and Answers in the various Competitive Examinations. Data Communication and Networking MCQs Set-2 - EXAMRADAR6.263J / 16.37J focuses on the fundamentals of data communication networks. One goal is to give some insight into the rationale of why networks are structured the way they are today and to understand the issues facing the designers of next-generation data networks. Much of the course focuses on network algorithms and

their performance. Data Communication Networks | Electrical Engineering and ... Data communication refers to the exchange of data between a source and a receiver via form of transmission media such as a wire cable. Data communication is said to be local if communicating devices are in the same building or a similarly restricted geographical area. The meanings of source and receiver are very simple. Network communication is discussed in terms of

availability of resources, partners to communicate with, and data synchronization. Presentation: The presentation layer is responsible for mapping resources and creating context. It is used to translate lower level networking data into data that applications expect to see. *Data Communication and Computer Network* Data transmission and data reception (or, more broadly, data communication or digital communications) is the

transfer and reception of data (a digital bitstream or a digitized analog signal) over a point-to-point or point-to-multipoint communication channel. Examples of such channels are copper wires, optical fibers, wireless communication channels, storage media and computer buses.
