Critical thinking—every scholar in the literature has defined it, but there is no clearly agreed upon definition. No wonder polls and surveys reveal that few college-level faculty can define critical thinking or know how to teach it. Still, critical thinking keeps appearing in accreditation standards and surveys of the skills employers seek in college graduates. The good news is that we do know that critical thinking can be taught. But the concept cries out for the simplification, translation into discipline-relevant course outcomes, tangible teaching strategies, and concrete assessment techniques that this book will provide. Like a course or a workshop, this book proposes learning outcomes for the reader—promises of what the reader will be able to do after reading it. These include:

- explain what critical thinking is in simple terms;
- convincingly explain to students why it is important for them to learn critical thinking, and, if they tune out, what they stand to lose;
- overcome the challenges that teaching critical thinking presents;
- identify the type of course content to which critical thinking can be applied and, therefore, that readers can use to teach critical thinking;
- integrate critical thinking into the design of a new or existing course in any discipline;
- write assessable critical thinking learning outcomes that are compatible with and make sense in any discipline;
- select and adapt activities and assignments that will give students no- or low-stakes practice with feedback in critical thinking using a variety of questions, tasks, and teaching methods.

Identify false information. Avoid getting tricked. Be quick-witted and insightful. Would you like to ask the right questions, come up with strong arguments, detect biases and irrational or illogical reasoning? But you don't know where to start learning these? The Art of Thinking Critically will help you with that! Using the brightest ideas and best practices of some of the greatest thinkers, you can become a self-thought critical thinker who doesn't accept things at face value. With the help of guided exercises, you will learn how to do your own research, think about information for yourself, and draw conclusions that stand true to you. Avoid being manipulated. Being surrounded by inaccurate and often misleading information can feel overwhelming. Become more astute and catch inconsistencies in others' reasoning, don't be misled. Learn to question, fact-check, and correct people without sounding offensive.

- How to self-educate to think more critically.
- Equip yourself with good questions and ideas on how to think for yourself.
- Break out of herd mentality.
- Get a structure on how to implement critical thinking practices in your life.

Human beings are generally curious and wish to understand the world better. But many of us didn't have the luck to learn effective questioning techniques as children. We were not encouraged to form opinions and were rather scolded for being too curious. So we didn't learn how to properly question and assess the information we hear, read, and how to think for ourselves. But we can absolutely change that! And educate our children to be better equipped with critical thinking skills. Make better decisions. Don't be gullible.
