The Sun's Path / Seasons - Regents Earth Science Earth Science Lab: Sun's Path and Seasons Introduction: Part A The sun's path is an apparent path across the sky. Each day, the ... Earth Science Lab Sun Path Answer Key We experience seasons on Earth because, as the Earth revolves, its axis is tilted by 23.5° relative to its orbit around the Sun. This tilt remains constant throughout the year (axial parallelism). The result is that during some times of the year, the northern hemisphere is tilted towards the Sun, while at other times, the northern hemisphere is tilted away from the Sun. With this interactive lab, you can examine the main factors that affect temperature, length of day and seasonal altitude of the sun. Hopefully you will discover how the position of the Earth in its orbit coupled with the tilt of the Earth's axis of rotation is responsible for seasons and the position of the path of our Sun in the sky over the course of a day.
