 Although the issue of offender decision-making pervades almost every discussion of crime and law enforcement, only a few comprehensive texts cover and integrate information about the role of decision-making in crime. The Oxford Handbook of Offender Decision Making provide high-quality reviews of the main paradigms in offender decision-making, such as rational choice theory and dual-process theory. It contains up-to-date reviews of empirical research on decision-making in a wide range of decision types including not only criminal initiation and desistance, but also choice of locations, times, targets, victims, methods as well as large variety crimes including homicide, robbery, domestic violence, burglary, street crime, sexual crimes, and cybercrime. Lastly, it provides in-depth treatments of the major methods used to study offender decision-making, including experiments, observation studies, surveys, offender interviews, and simulations. Comprehensive and authoritative, the Handbook will quickly become the primary source of theoretical, methodological, and empirical knowledge about decision-making as it relates to criminal behavior.

Managerial economics is the application of economic theory and quantitative methods (mathematics and statistics) to the managerial decision-making process. This book will appeal to students with limited prior training in economics and quantitative methods. It assumes that students will have had mathematics training at least through pre-calculus and that they have had a course in elementary statistics. It also expects students to have had an undergraduate course in intermediate microeconomics.

The book includes these features: * An Online Instructor's Manual * An Online Study Guide * A problem-solving approach to the study of managerial economics that combines the features of a standard managerial economics textbook with those of a separate study guide. * A method for helping business students develop the analytical skills necessary for success in the study of managerial economics, finance, and management. * A more extensive review of mathematical techniques than most comparable textbooks. * A separate chapter on game theory, including: * Noncooperative, simultaneous-move, one-shot games * Cooperative, simultaneous-move, infinitely-repeated games (including collusions, cheating rules, and determinants of collusive agreements) * Cooperative, simultaneous-move, finitely-repeated games * Focal-point equilibria * Multistage games * Bargaining with and without symmetric and asymmetric impatience * A chapter on the time value of money and capital budgeting * The accentuation of risk, uncertainty, and the economics of information throughout Book Hooks: * Practice oriented, avoiding complex theoretical explanations with cumbersome notation * Problems are included in each section and are made integral to learning and understanding subjects * Math review uses economic relationships instead of general notation * Excellent balance among motivation, theory, and examples * Clear exposition Key Features: Emphasizes utility and applicability, not innovation Chapters conclude with: * chapter review * key terms and concepts * chapter questions * chapter exercises * selected readings

Microeconomics: Theory and Applications with Calculus uses calculus, algebra, and graphs to present microeconomic theory using actual examples, and then encourages readers to apply the theory to analyze real-world problems. The Third Edition has been substantially revised, 80% of the Applications are new or updated, and there are 24 new Solved Problems. Many books instruct readers on how to use the tools of policy analysis. This book is different. Its primary focus is on helping readers to look critically at the strengths, limitations, and the underlying assumptions analysts make when they use standard tools or problem framings. Using examples, many of which involve issues in science and technology, the book exposes readers to some of the critical issues of taste, professional responsibility, ethics, and values that are associated with policy analysis and research. Topics covered include policy problems formulated in terms of utility maximization such as benefit-cost, decision, and multi-attribute analysis, issues in the valuation of intangibles, uncertainty in policy analysis, selected topics in risk analysis and communication, limitations and alternatives to the paradigm of utility maximization, issues in behavioral decision theory, issues related to organizations and multiple agents, and selected topics in policy advice and policy analysis for government.

This edited collection, first published in 1987, provides a comparative analysis of different approaches to urban modelling, and lays the foundations for the possibility of integration and a more unified field. The first part contextualises the development

of the field of urban systems modelling, focusing on the variety of approaches and possible implications of this on the future of research and methodology. Next, the editors consider economic and 'non-economic' approaches, followed by an analysis of spatial-interaction-based approaches. Providing an overview to the field and research literature, the overarching argument is that there should be an integrated methodological approach to urban system modelling.

This book by Lionel Robbins first appeared in 1932 as an outstanding English-language statement of the Misesian view of economic method, namely that economics is a social science and must advance its propositions by means of deductive reasoning and not through the methods used in the natural sciences. The case is argued here with patience and attention to scholarly details. The unfortunate second edition of this book, which is more available today, introduces confusions by departing from Austrian microeconomic theory. Thus does the Mises Institute celebrate the 75th anniversary of the first edition with this reprint. "Reading Robbins," writes Samuel Bostaph of the University of Dallas, "is an excellent way of contrasting his explanation of the basic nature of economics with that of the Austrian School, as found in the work of Mises as an extension of Carl Mengers's foundations. Such a reading wonderfully clarifies one's understanding of the basic conception of economics as a science of human action, rather than one of mere 'economizing.' "

Managerial economics, meaning the application of economic methods in the managerial decision-making process, is a fundamental part of any business or management course. This textbook covers all the main aspects of managerial economics: the theory of the firm; demand theory and estimation; production and cost theory and estimation; market structure and pricing; game theory; investment analysis and government policy. It includes numerous and extensive case studies, as well as review questions and problem-solving sections at the end of each

chapter. Nick Wilkinson adopts a user-friendly problem-solving approach which takes the reader in gradual steps from simple problems through increasingly difficult material to complex case studies, providing an understanding of how the relevant principles can be applied to real-life situations involving managerial decision-making. This book will be invaluable to business and economics students at both undergraduate and graduate levels who have a basic training in calculus and quantitative methods.

The United States has once again entered into a period of large external imbalances. This time the current account deficit, at nearly 6 percent of GDP in 2004, is much larger than in the last episode, when the deficit peaked at about 3.5 percent of GDP in 1987. Moreover, the deficit is on track to become substantially larger over the next several years. This study examines whether the large and growing current account deficit is a problem, and if so, how the problem can be solved. A central policy conclusion of this study is that it is increasingly important that the United States reduce its external current account deficit. This deficit is no longer benign as it arguably was in the late 1990s when it was financing high investment instead of high consumption and large government dissaving.
