MATHEMATICS FOR
ECONOMISTS 2.16, 17
a) $f(0(x) = 5 \cdot 2x$ if $x < 0$,
 $22x$ if $x \geq 0$. As x

converges to 0 both from above and below, $f'(x)$ converges to 0, so the function is C1. See figure. b) This function is not continuous (and thus not differentiable).

MATHEMATICS FOR ECONOMISTS Carl P. Simon Lawrence Blume Malcolm Pemberton and Nicholas Rau, *Mathematics for Economists*. A textbook written at a more basic level than Simon and Blume, I considered using this as our main text. It has many good applications and I'll surely refer to it for lecture and exam ideas. There are many good texts covering optimization methods in economics and a few that do well with the **ECONOMICS 630 Mathematics for Economists** (Ph.D. Section) Economics

students will welcome the new edition of this excellent textbook. Mathematics is an integral part of economics and understanding basic concepts is vital. Many students come into economics courses without having studied mathematics for a number of years.
