This work is intended to all students of Mizan - Teppi University, Ethiopia, Engineering Campus, most especially to my students in Construction Technology and Management (COTM). The contents of this stresses professional applications, as the Lecturer

From EC2 singly reinforced concrete stress block, the moment resistance capacity of the beam M_{Rd} is given by; $M_{Rd} = F_{cd} z$ — (1) f_{cd} = design strength of concrete = $(\alpha_{cc} f_{ck})/\gamma_c = (0.85 \times f_{ck})/1.5 = 0.5667f_{ck}$.

Compressive force in concrete = Design stress (f_{cd}) x Area of compression block $F_{cd} = 0.5667f_{ck} \times 0.8 \times b = 0.4533bf_{ck}$
