It's Not Just the Facts When it comes to climate change, this truly

is a golden age—of fake news, post-truths, pluralistic ignorance, conspiracy theories, a willfully ignorant administration, and the Cranky Uncle. You know him. We all have one. That exasperating Thanksgiving blusterer digs in his heels even as the foundation of his denial thaws faster than the Arctic ice caps. Written and illustrated by Dr. John Cook, cognitive psychologist and founder of the award-winning website Skeptical Science, Cranky Uncle combines humor and science to make clear, calm, and winnable arguments in the public controversy of climate change. Can we change our Cranky Uncle's mind? Probably, regrettably, not. But Dr. Cook makes it easier for us to understand him. And armed with this knowledge, prevent climate misinformation from spreading further.

*Change* SAGE

NEW YORK TIMES BESTSELLER • NATIONAL BOOK AWARD WINNER • From one of America's iconic writers, a stunning book of electric honesty and passion that explores an intensely personal yet universal experience: a portrait of a marriage—and a life, in good times and bad—that will speak to anyone who has ever loved a husband or wife or child. Several days before Christmas 2003, John Gregory Dunne and Joan Didion saw their only daughter, Quintana, fall ill with what seemed at first flu, then pneumonia, then complete septic shock. She was put into an induced coma and placed on life support. Days later—the night before New Year's Eve—the Dunnes were just sitting down to dinner after visiting the hospital when John Gregory Dunne suffered a massive and fatal coronary. In a second, this close, symbiotic partnership of forty years was over. Four weeks later, their daughter pulled through. Two months after that, arriving at LAX, she collapsed and underwent six hours of brain surgery at

UCLA Medical Center to relieve a massive hematoma. This powerful book is Didion's attempt to make sense of the "weeks and then months that cut loose any fixed idea I ever had about death, about illness ... about marriage and children and memory ... about the shallowness of sanity, about life itself.

**Summary: Thinking for a Change** FaithWords

Donors, leaders of nonprofits, and public policy makers usually have the best of intentions to serve society and improve social conditions. But often their solutions fall far short of what they want to accomplish and what is truly needed. Moreover, the answers they propose and fund often produce the opposite of

what they want over time. We end up with temporary shelters that increase homelessness, drug busts that increase drug-related crime, or food aid that increases starvation. How do these unintended consequences come about and how can we avoid them? By applying conventional thinking to complex social problems, we often perpetuate the very problems we try so hard to solve, but it is possible to think differently, and get different results. *Systems Thinking for Social Change* enables readers to contribute more effectively to society by helping them understand what systems thinking is and why it is so important in their work. It also gives concrete guidance on how to incorporate systems thinking in problem solving, decision making, and strategic planning without becoming a technical expert. Systems thinking leader David Stroh walks readers through techniques he has used to help people improve their efforts to end homelessness, improve public health, strengthen education, design a system for early childhood development, protect child welfare, develop rural economies, facilitate the reentry of formerly incarcerated people into society, resolve identity-based conflicts, and more. The result is a highly readable, effective guide to understanding systems and using that knowledge to get the results you want.

Today Matters Wonsockon Publishers

*A Study of Thinking* is a pioneering account of how human beings achieve a measure of rationality in spite of the constraints imposed by bias, limited attention and memory, and the risks of error imposed by pressures of time and ignorance. First published in 1956 and hailed at its appearance as a groundbreaking study, it is still read three decades later as a major contribution to our

understanding of the mind. In their insightful new introduction, the authors relate the book to the cognitive revolution and its handmaiden, artificial intelligence. The central theme of the work is that the scientific study of human thinking must concentrate upon meaning and its achievement rather than upon the behaviorists' stimuli and responses and the presumed connections between them. The book's point of departure is how human beings group the world of particulars into ordered classes and categories-concepts-in order to impose a coherent and manageable order upon that world. But rather than relying principally on philosophical speculation to make its point, *A Study of Thinking* reports dozens of experiments to elucidate the strategies that people use in penetrating to the deep structure of the information they encounter. This seminal study was a major event in the cognitive revolution of the 1950s. Reviewing it at the time, J. Robert Oppenheimer said it "has in many ways the flavor of conviction which makes it point to the future."

#### Winning the War in Your Mind Routledge

Any effective response to an uncertain future will require independently thinking individuals working together. Human ideas and actions have led to unprecedented changes in the relationships among humans, and between humans and the Earth. Changes in the air we breathe, the water we drink and the energy we use are evidence of Nature – which has no special interest in sustaining human life – looking out for itself. Even the evolutionary context for humans has altered. Evolutionary pressures from the digital communication revolution have been added to those from natural systems. For humans to meet these challenges requires social re-organisation that is neither simple nor easy. *Independent Thinking in an Uncertain World* explores workable, field-tested strategies from the frontiers of creating a viable future for humans on Earth. Based on research results from hundreds of social learning workshops with communities worldwide, many of them part of Australian National University's Local Sustainability Project, authors with diverse interests explore the gap between open-minded individual thinking and closed socially defined knowledges. The multiple dimensions of individual, social and biophysical ways of thinking are combined in ways that allow open-minded individuals to learn from one another.
