Competition Policy for Shared Prosperity and Inclusive Growth

The Handbook of Economic Sociology, Second Edition is the most comprehensive and up-to-date treatment of economic sociology available. The first edition, copublished in 1994 by Princeton University Press and the Russell Sage Foundation as a synthesis of the burgeoning field of economic sociology, soon established itself as the definitive presentation of the field, and has been widely read, reviewed, and adopted. Since then, the field of economic sociology has continued to grow by leaps and bounds and to move into new theoretical and empirical territory. The second edition, while being as all-embracing in its coverage as the first edition, represents a wholesale revamping. Neil Smelser and Richard Swedberg have kept the main overall framework intact, but nearly two-thirds of the chapters are new or have new authors. As in the first edition, they bring together leading sociologists as well as representatives of other social sciences. But the thirty chapters of this volume incorporate many substantial thematic changes and new lines of research--for example, more focus on international and global concerns, chapters on institutional analysis, the transition from socialist economies, organization and networks, and the economic sociology of the ancient world. The Handbook of Economic Sociology, Second Edition is the definitive resource on what continues to be one of the leading edges of sociology and one of its most important interdisciplinary adventures. It is a must read for all faculty, graduate students, and undergraduates doing work in the field. The Handbook of Global Climate and Environment Policy presents an authoritative and comprehensive overview of global policy on climate and the environment. It combines the strengths of an interdisciplinary team of experts from around the world to explore current debates and the latest thinking in the search for global environmental solutions. Explores the environmental challenges we currently face, and the concepts and approaches to solving these Questions the role of global actors, institutions and processes, and considers the links between global climate and environment policy, and that of the global economy Highlights the connections between social science research and global policy Brings together authoritative coverage of recent research by internationally-renowned experts from around the world, including from North America, Europe, and Asia Provides an essential resource guide for students and researchers from across a wide range of related disciplines - from politics and international relations, to environmental sciences and sociology - and for global policy practitioners

Cambodia's Economic Transformation Macmillan Higher Education

Sustainable economic development has played a major role in the decline of global poverty in the past two decades. There is no doubt that competitive markets are key drivers of economic growth and productivity. They are also valuable channels for consumer welfare. Competition policy is a powerful tool for complementing efforts to alleviate poverty and bring about shared prosperity. An effective competition policy involves measures that enable contestability and firm entry and rivalry, while ensuring the enforcement of antitrust laws and state aid control. Governments from emerging and developing economies are increasingly requesting pragmatic solutions for effective competition policy implementation, as well as recommendations for pro-competitive sectoral policies. A Step Ahead: Competition Policy for Shared Prosperity and Inclusive Growth puts forward a

research agenda that advocates the importance of market competition, effective market regulation, and competition policies for achieving inclusive growth and shared prosperity in emerging and developing economies. It is the result of a global partnership and shared commitment between the World Bank Group and the Organisation for Economic Co-operation and Development (OECD). Part I of the book brings together existing empirical evidence on the benefits of competition for household welfare. It covers the elimination of anticompetitive practices and regulations that restrict competition in key markets and highlights the effects of competition on small producers and employment. Part II of the book focuses on the distributional effects of competition policies and how enforcement can be better aligned with shared prosperity goals.

Traditional views of global environmental politics take the structures and relations of international politics as a given. Solutions to environmental problems, then, must be products of concession, negotiation, and inevitable compromise—a world of top-down planetary management. Lipschutz challenges students to question these conventional approaches. He argues that much light can be shed on global environmental degradation if we look beyond the politics of conflict and cooperation and explore environmental problems from their very "roots." Using a framework that accounts for the ontologies, material conditions, and power relations that structure global environmental problems, Lipschutz is able to more effectively question attempts to clean up the globe and sustain the world's natural resources. Throughout the text, the author uses compelling cases to illustrate the effects of globalization and capitalism, yet is careful to make the link between the local and the global to show how we, as individuals, are both consumers of goods and producers of pollution. A powerful new approach How is the financing of a water system in Bolivia linked to long-standing forestation practices in India? Taking nothing for granted, the root causes of major global environmental problems are exposed and subjected to rigorous analysis. Lipschutz shows, for instance, how privatization operates in different global contexts with strikingly similar consequences. In what ways are liberalism and realism actually two sides of the same coin? Both make self-interest—of the individual and of the state—key operating terms. In a revealing comparison, Lipschutz explores the limits of these dominant political models to effectively frame and solve environmental problems. What kinds of political, social, and environmental practices bring about meaningful change? By emphasizing the global impacts of local actions, the text shows how attempts to control environmental problems may actually reproduce the very systems they are meant to ameliorate. Combined with practical pedagogy Rich historical background helps contextualize contemporary issues. Extensive suggested reading lists at the end of each chapter guide students to further research, while tables and figures elegantly show data and concepts. The emphasis on assessing the root causes of global

environmental problems and models encourages critical thinking. Students are also encouraged to rethink their own role in the global environmental system and to get involved in effective forms of social change.

Power, Perspectives, and Practice W. W. Norton & Company

Why is productivity higher in cities? Does urbanization cause growth or does growth cause urbanization? Do countries achieve rapid growth or high incomes without urbanization? How can policy makers reap the benefits of urbanization without paying too high a cost? Does supporting urbanization imply neglecting rural areas? Why do so few governments welcome urbanization? What should governments do to improve housing conditions in cities as they urbanize? Are innovations in housing finance a blessing or a curse for developing countries? How will governments finance the trillions of dollars of infrastructure spending needed for cities in developing countries? First in a series of thematic volumes, this book was prepared for the Commission on Growth and Development to evaluate the state of knowledge of the relationship between urbanization and economic growth. It does not pretend to provide all the answers, but it does identify insights and policy levers to help countries make urbanization work as part of a national growth strategy. It examines a variety of topics: the relevance and policy implications of recent advances in urban economics for developing countries, the role of economic geography in global economic trends and trade patterns, the impacts of urbanization on spatial inequality within countries, and alternative approaches to financing the substantial infrastructure investments required in developing-country cities. Written by prominent academics in their fields, *Urbanization and Growth* seeks to create a better understanding of the role of urbanization in growth and to inform policy makers tackling the formidable challenges it poses.

An Introduction to American Politics CRC Press

This 2003 book offered the first in-depth international survey of contemporary research and debates in business history. Over the two decades leading to its publication, enormous advances had been made in writing the history of business enterprise and business systems. Historians are documenting and analyzing the evolution of a wide range of important companies and systems, their patterns of innovation, production, and distribution, their financial affairs, their political activities, and their social impact.

Each essay is written by a prominent authority who provides an assessment of the state and significance of research in his or her area. This volume is a reference work that will be of immense value to historians, economists, management researchers, and others concerned to access the latest insights on the evolution of business throughout the world.

Global Environmental Politics Microeconomics 4eMacroeconomics: Principles for a Changing World

This book is a collection of high-impact papers accepted and presented at the 2019 Vietnam's Business and Economics Research Conference (VBER2019) organised by Ho Chi Minh City Open University held on 18th–20th July 2019. The Special Issue is associated with a broad coverage of the contemporary issues in Business and Economics in Vietnam and other emerging markets reflecting a key theme of VBER2019: Vietnam's Place in the Asia Pacific Region. A total of 14 papers were published from more than the 120 submissions to the VBER2019 Conference. Published papers had been undergone a rigorous reviewing process conducted by the Journal of Risk and Financial Management. The papers incorporated in this book address contemporary issues in business and economics from Vietnam and other emerging markets in the Asian region from various angles such as economics, finance, and statistics to management science. At the time of writing this note, some of the papers have attracted more than 1000 downloads in 3 months. In particular, a paper on "Foreign Direct Investment and Economic Growth from Developing Countries in the Short Run and Long Run" by Trang Thi-Huyen Dinh and her team has attracted almost 6000 downloads in 3 months. These statistics indicate that the papers published in this Special Issue have attracted the wide interest of readers. Among these 14 published papers, three main areas of important contemporary issues in Business and Economics in the Asian region can be identified. First, a block of papers deals with various important and fundamental issues in the emerging markets the Asian region, from exchange rate regime, financial inclusion, and financial development to energy consumption and environmental degradation. On the issue of CO2 emissions, energy consumption and economic growth in the ASEAN, Vo, Vo, and Le utilized various time series econometrics approaches. Key findings from this paper indicate that there are no long-run relationships among carbon dioxide (CO2) emissions, energy

consumption, renewable energy, population growth, and economic growth in the Philippines and Thailand, but a relationship does exist in Indonesia, Myanmar, and Malaysia. Loo, in his paper on financial inclusion for the ASEAN, concluded that advancing internet capability and availability present investors an opportunity to offer financial technology or Fintech to meet the need for financial services in this digital era. Second, a challenge in quantitative studies for a single country, such as Vietnam, with limited data is generally noted. However, various empirical studies on Vietnam's business and economics issues have been conducted. Nguyen, Quan, and Pham examined the cultural distance and entry mode of foreign direct investment in Vietnam. A key finding from their paper is that when there is a great cultural difference between Vietnam and their home country, foreign-invested firms prefer wholly owned subsidiaries over equity joint ventures. Within the Vietnamese market, Pham, Vo, Ho, and McAleer conducted a study on the issue of corporate financial distress. The authors conclude that the corporate financial distress prediction model, which includes accounting factors with macroeconomic indicators, performs much better than alternative models. In addition, the evidence confirms that the global financial crisis (GFC) had a damaging impact on each sector, with the Health & Education sector demonstrating the most impressive recovery post-GFC, and the utilities sector recording a dramatic increase in bankruptcies post-GFC. At another extreme of the spectrum, Van and Nguyen considered that competitive context, social influences, the understanding of managers about corporate social responsibility (CSR), and the internal environment of companies are the four drivers of CSR. The authors also argued that in the four drivers, competitive context has the strongest impact on adopting CSR. Third, last but not least, various papers focus on an important aspect of public finance. For an example, Pham, Pham, and Ly documented the effect of double taxation treaties on the bilateral trade of Vietnam with ASEAN member states, thereby making an extensive comparison with its EU partner countries. Their findings indicate the significant contributions of the tax treaties to Vietnam's trade performance, not exclusively with ASEAN but also with EU partner countries. In addition, regarding public finance for Vietnam, Nguyen, Vo, Ho, and Vo investigated the contribution of fiscal decentralisation to economic growth across provinces in Vietnam.

For the first time in Vietnam, the fiscal decentralisation index together its two subcomponents, including fiscal importance and fiscal autonomy, are developed. Findings from this paper indicate that while fiscal importance and an overall level of fiscal decentralisation have provided negative impact on provincial economic growth, fiscal autonomy has a positive impact on economic growth across provinces in Vietnam.

This two-volume handbook presents a collection of novel methodologies with applications and illustrative examples in the areas of data-driven computational social sciences. Throughout this handbook, the focus is kept specifically on business and consumer-oriented applications with interesting sections ranging from clustering and network analysis, meta-analytics, memetic algorithms, machine learning, recommender systems methodologies, parallel pattern mining and data mining to specific applications in market segmentation, travel, fashion or entertainment analytics. A must-read for anyone in data-analytics, marketing, behavior modelling and computational social science, interested in the latest applications of new computer science methodologies. The chapters are contributed by leading experts in the associated fields. The chapters cover technical aspects at different levels, some of which are introductory and could be used for teaching. Some chapters aim at building a common understanding of the methodologies and recent application areas including the introduction of new theoretical results in the complexity of core problems. Business and marketing professionals may use the book to familiarize themselves with some important foundations of data science. The work is a good starting point to establish an open dialogue of communication between professionals and researchers from different fields. Together, the two volumes present a number of different new directions in Business and Customer Analytics with an emphasis in personalization of services, the development of new mathematical models and new algorithms, heuristics and metaheuristics applied to the challenging problems in the field. Sections of the book have introductory material to more specific and advanced themes in some of the chapters, allowing the volumes to be used as an advanced textbook. Clustering, Proximity Graphs, Pattern Mining, Frequent Itemset Mining, Feature Engineering, Network and Community Detection,

Network-based Recommending Systems and Visualization, are some of the topics in the first volume. Techniques on Memetic Algorithms and their applications to Business Analytics and Data Science are surveyed in the second volume; applications in Team Orienteering, Competitive Facility-location, and Visualization of Products and Consumers are also discussed. The second volume also includes an introduction to Meta-Analytics, and to the application areas of Fashion and Travel Analytics. Overall, the two-volume set helps to describe some fundamentals, acts as a bridge between different disciplines, and presents important results in a rapidly moving field combining powerful optimization techniques allied to new mathematical models critical for personalization of services. Academics and professionals working in the area of business analytics, data science, operations research and marketing will find this handbook valuable as a reference. Students studying these fields will find this handbook useful and helpful as a secondary textbook.

With this edition, Eric Chiang continues to link economics concepts to topics of personal interest to students. The new edition is a thoroughly contemporary, fully integrated print/technology resource that adapts to the way you want to teach. As always, this concise book focuses on the topics most often covered in the principles course, but with this edition, it offers a stronger emphasis than ever on helping students apply an economic way of thinking to the overwhelming flow of data we face every day. *Economics: Principles for a Changing World* is fully informed by Eric Chiang's experiences teaching thousands of students worldwide, both in person and online. Developing the text, art, media, homework, and ancillaries simultaneously, Chiang translates these experiences into a cohesive approach that embodies the book's founding principles: To use technology as a tool for learning--before lectures, during class, when doing homework, and at exam time. To help students harness the data literacy they'll need as consumers of economic information.

Globalisation has had a profound effect on economic outcomes, especially in emerging market economies (EMEs). In particular, it is widely acknowledged to have been a major driver of the strong

income growth and reduction in poverty witnessed in EMEs in the past few decades. Despite these benefits, there has recently been a backlash against globalisation and growing support for inward looking policies in many parts of the world. Against this backdrop, this volume takes stock of the EME experience with two facets of globalisation-trade and migration. It summarises different country experiences with regard to the aggregate as well as distributional consequences. In doing so, it highlights several examples and avenues for policy action to continue to harness the benefits of globalisation while limiting the costs.

Over time, globalization has evolved into a shared journey of humanity, involving entrepreneurship, innovation, business and policy advances around the world. This book explores the link between globalization and development, and reveals the dynamics, strengths and weaknesses, trends in and implications of globalization in Asia and Africa. Presenting papers by respected experts in the field, it shares essential insights into the status quo of globalization processes and structures, identifies the opportunities and threats that globalization faces, and sheds light on the path to global peace. Topics range from using fair-trade practices to compensate for the impacts of globalization; to lessons learned for tomorrow from Tunisia, Morocco and Jordan; as well as emergent topics such as global entrepreneurship capacity and developing the Chinese economy overseas.

Economics: Private and Public Choice is an aid for students and general readers to develop a sound economic reasoning. The book discusses several ways to economic thinking including six guideposts as follows: (i) scarce goods have costs; (ii) Decision-makers economize in their choices; (iii) Incentives are important; (iv) Decision-makers are dependent on information scarcity; (v) Economic actions can have secondary effects; and (vi) Economic thinking is scientific. The book explains the Keynesian view of money, employment, and inflation, as well as the monetarist view on the proper macropolicy, business cycle, and inflation. The book also discusses consumer decision making, the elasticity of demand, and how income influences demand. The text analyzes costs and producer decisions, the firm under pure competition, and how a competitive model functions. The book explains monopoly, and also considers the high barriers that prevent entry such as legal barriers, economies of scale, and control over important resources. The author also presents comparative economic systems such as capitalism and socialism. This book can prove useful for students and professors in economics, as well as general readers whose works are related to public service and planning in the area of economic development.

This book presents mathematical, programming and statistical

tools used in the real world analysis and modeling of financial data. The tools are used to model asset returns, measure risk, and construct optimized portfolios using the open source R programming language and Microsoft Excel. The author explains how to build probability models for asset returns, to apply statistical techniques to evaluate if asset returns are normally distributed, to use Monte Carlo simulation and bootstrapping techniques to evaluate statistical models, and to use optimization methods to construct efficient portfolios.

With this new edition, Eric Chiang transforms CoreMicroeconomics into a text/media resource well attuned to today's students. Long active in the economics education community, Chiang brings a contemporary teacher's perspective to the book, supporting a variety of learning approaches by introducing modern topics, new pedagogy, a more visual presentation, and well-integrated media tools. All this while maintaining the book's defining focus on just those topics instructors cover most often in the course.
