interested in viruses as

agents of human disease. Includes over 30% new material - virtually all of the figures and tables have been redrawn to include the latest information and the text has been extensively rewritten to include the most up-to-date information. Includes a new chapter on emerging and reemerging viral diseases such as avian flu, SARS, the spread of West Nile virus across America, and the continuing spread of Nipah virus in Southeast Asia. Further reading sections at the end of each chapter make it easy to find key references. World maps depicting the current distribution of existing and newly emerging viruses are also incorporated into the text.

Molecular Biology of the Cell 6E - The Problems Book W. H. Freeman

Everything worth doing is going to have some obstacles. Some people look at setbacks as evidence that whatever it is they've been striving for just wasn't meant to be. But according to bestselling author and master motivator John Mason, the moment most people give up is the moment of their greatest opportunity. In this inspiring book, Mason gives readers fifty-two keys to never giving up on their dreams. He shows them how to ask the right questions when they are on the verge of quitting, how to avoid unnecessary trouble, and how to keep their energy level up in the face of

setbacks. Whether readers are building a business, a family, a portfolio, or relationships, they'll find the strength and motivation to go on, break through, and claim the prize.

Janis Kuby's groundbreaking introduction to immunology was the first textbook for the course actually written to be a textbook. Like no other text, it combined an experimental emphasis with extensive pedagogical features to help students grasp basic concepts. Now in a thoroughly updated new edition, Kuby Immunology remains the only undergraduate introduction to immunology written by teachers of the course. In the Kuby tradition, authors Judy Owen, Jenni Punt, and Sharon

Stranford present the most current concepts in an experimental context, conveying the excitement of scientific discovery, and highlight important advances, but do so with the focus on the big picture of the study of immune response, enhanced by unsurpassed pedagogical support for the first-time learner.
