COLTON ENGLISH

Natural Resource Conservation Springer

If you're a student or hobbyist who enjoys working with electronics, you'll love this project-packed book. It puts at your fingertips the hands-on guidance you need.

Management for a Sustainable Future Psychology Press

This text emphasizes the ecological principles, policies, and practices to manage a sustainable future. It is a comprehensive text offering a scientifically thorough survey of natural resource and environmental issues with an emphasis on practical, cost-effective, and sustainable solutions.

Networks, Lines, and Fields Anchor Books

This well-illustrated handbook provides answers to important questions that may arise during the retrieval of multiple organs for transplantation and offers step-by-step descriptions of current surgical techniques for procurement of the various thoracic and abdominal organs, including heart, lung, liver, intestine, pancreas, and kidney. The coverage includes detailed instruction on liver splitting techniques and on living donor liver hepatectomies and laparoscopic and robot-assisted nephrectomy for transplantation. In addition, guidance is provided on preoperative evaluation for multiorgan donation, contraindications, management for organ retrieval in deceased donors, and organ preservation. The advice offered and the questions addressed will be of relevance not only to transplant surgeons, trainees, and fellows but also to all other professionals involved in organ transplantation, including nursing staff in intensive care units and emergency rooms.

Spectroscopic Tools and Implementation Strategies for the Chemical and Pharmaceutical Industries John Wiley & Sons

Resulting from the need for greater realism in models of human and organizational behavior in military simulations, there has been increased interest in research on integrative models of human performance, both within the cognitive science community generally, and within the defense and aerospace industries in particular. This book documents accomplishments and lessons learned in a multi-year project to examine the ability of a range of integrated cognitive modeling architectures to explain and predict human behavior in a common task environment that requires multi-tasking and concept learning. This unique project, called the Agent-Based Modeling and Behavior Representation (AMBR) Model Comparison, involved a series of human performance model evaluations in which the processes and performance levels of computational cognitive models were compared to each other and to human operators performing the identical tasks. In addition to quantitative data comparing the performance of the models and real human performance, the book also presents a qualitatively oriented discussion of the practical and scientific considerations that arise in the course of attempting this kind of model development and validation effort. The primary audiences for this book are people in academia, industry, and the military who are interested in explaining and predicting complex human behavior using computational cognitive modeling approaches. The book should be of particular interest to individuals in any sector working in Psychology, Cognitive Science, Artificial Intelligence, Industrial Engineering, System Engineering, Human Factors, Ergonomics and Operations Research. Any technically or scientifically oriented professional or student should find the material fully accessible without extensive mathematical background.

Proceedings of the 3rd IFToMM Symposium on Mechanism Design for Robotics Sams Publishing

This volume contains the Proceedings of the 3rd IFToMM Symposium on Mechanism Design for Robotics, held in Aalborg, Denmark, 2-4 June, 2015. The book contains papers on recent advances in the design of mechanisms and their robotic applications. It treats the following topics: mechanism design, mechanics of robots, parallel manipulators, actuators and their control, linkage and industrial manipulators, innovative mechanisms/robots and their applications, among others. The book can be used by researchers and engineers in the relevant areas of mechanisms, machines and robotics.

Django Unleashed Django Unleashed

This Volume presents the selected papers from the 5 Parallel Symposiums of the 2014 Fourth World Congress on Information and Communication Technologies (WICT 2014) held in Malacca, Malaysia. The theme of WICT 2014 'Innovating ICT for Social Revolutions'. WICT 2014 is Co-Organized by Machine Intelligence Research Labs (MIR Labs), USA and Universiti Teknikal Malaysia Melaka, Malaysia. WICT 2014 is technically co-sponsored by IEEE Systems, Man & Cybernetics Society Malaysia and Spain Chapters and Technically Supported by IEEE Systems Man and Cybernetics Society, Technical Committee on Soft Computing.

Modeling Human Behavior With Integrated Cognitive Architectures Beacon Press

Django is an amazingly powerful system for creating modern, dynamic websites. But programming Django hasn't always been easy—until now. Django Unleashed is your step-by-step, beginner-friendly guide to leveraging Django's core capabilities and its powerful contributed library. You'll learn in the most effective way possible: hands on, by building a fully functional Django website from scratch. You'll even deploy the website to the cloud. As you build your website, expert Django consultant and trainer Andrew Pinkham reveals how websites operate; how Django makes building websites easy; how to write Python code that leverages its immense capabilities; and how to build solutions that are robust, reliable, and secure. You'll start simply and learn to solve increasingly challenging problems: mastering new features and understanding how Django's architecture shapes their behavior, and gaining essential knowledge for working with any web framework, not just Django.

Pattern Analysis, Intelligent Security and the Internet of Things Springer

The use of real or near real time measurement of chemical production process parameters as the basis for achieving control or optimisation of a manufacturing process has wide application in the petrochemical, food and chemical industries. Process analytical chemistry (PAC), or process analytical technology (PAT) as it has recently been called, is now being deployed in the pharmaceutical industry, where it is seen as a technology that can help companies to improve their

conformity with manufacturing compliance regulations. The objective of this book is to provide a starting point for implementing process analytical chemistry tools in process monitoring applications or as part of a total quality management system. Written from the perspective of the spectroscopist required to implant PAT tools in a process environment, attention is focussed on measurements that are made "in process" at-line or off-line, providing data on product during manufacture. With chapters covering the key spectroscopic tools, their applications in the pharmaceutical and chemical industries and basic chemometrics, the novice can quickly develop a sound understanding of the most practical technologies and applications. Implementation strategies are fully covered and address some of the critical issues that need to be tackled when setting up a PAT project - including choosing a project with a sound business justification in the first place.

Recent Advances in Mechanism Design for Robotics TAB/Electronics

Begun as the United States moved its armed forces into Iraq, Rashid Khalidi's powerful and thoughtful new book examines the record of Western involvement in the region and analyzes the likely outcome of our most recent Middle East incursions. Drawing on his encyclopedic knowledge of the political and cultural history of the entire region as well as interviews and documents, Khalidi paints a chilling scenario of our present situation and yet offers a tangible alternative that can help us find the path to peace rather than Empire. We all know that those who refuse to learn from history are doomed to repeat it. Sadly, as Khalidi reveals with clarity and surety, America's leaders seem blindly committed to an ahistorical path of conflict, occupation, and colonial rule. Our current policies ignore rather than incorporate the lessons of experience. American troops in Iraq have seen first hand the consequences of U.S. led "democratization" in the region. The Israeli/Palestinian conflict seems intractable, and U.S. efforts in recent years have only inflamed the situation. The footprints America follows have led us into the same quagmire that swallowed our European forerunners. Peace and prosperity for the region are nowhere in sight. This cogent and highly accessible book provides the historical and cultural perspective so vital to understanding our present situation and to finding and pursuing a more effective and just foreign policy. From the Hardcover edition.
