ABC-CLIO

Surely the ancient Greeks would have been baffled to see what we consider their "mythology." Here, Claude Calame mounts a powerful critique of modern-day misconceptions on this front and the lax methodology that has allowed them to prevail. He argues that the Greeks viewed their abundance of narratives not as a single mythology but as an "archaeology." They speculated symbolically on key historical events

so that a community of believing citizens could access them efficiently, through ritual means. Central to the book is Calame's rigorous and fruitful analysis of various accounts of the foundation of that most "mythical" of the Greek colonies--Cyrene, in eastern Libya. Calame opens with a magisterial historical survey demonstrating today's misapplication of the terms "myth" and "mythology." Next, he examines the Greeks' symbolic discourse to

show that these modern concepts arose much later than commonly believed. Having established this interpretive framework, Calame undertakes a comparative analysis of six accounts of Cyrene's foundation: three by Pindar and one each by Herodotus (in two different versions), Callimachus, and Apollonius of Rhodes. We see how the underlying narrative was shaped in each into a poetically sophisticated, distinctive form by the respective medium, a particular

poetical genre, and the specific socio-historical circumstances. Calame concludes by arguing in favor of the Greeks' symbolic approach to the past and by examining the relation of mythos to poetry and music.

Documents and Letters Intended to Illustrate the Revolutionary Incidents of Queens County Routledge

An updated English edition of Pohlmann's standard reference work on the surviving remains of Greek music which was first published in German in 1970. The original

number of fragments, all of which have been revised and consequently reinterpreted, has been expanded to 61 and includes pieces that date from the Classical through to the Roman period.

This highly motivating book of 115 documents complements Amsco's textbook *Global History and Geography*, but it may be used with any other global history textbook. It may be used by students preparing for an end-of-course global history exam that contains document-based essay questions (such as the New York State Regents Exam in Global

History and Geography). John Wiley & Sons
This book, a companion volume to Professor Pollitt's *The Art of Rome: Sources and Documents* (published by the Press in 1983), presents a comprehensive collection in translation of ancient literary evidence relating to Greek sculpture, painting, architecture, and the decorative arts. Its purpose is to make this important evidence available to students who are not specialists in the Classical languages or Classical archaeology. The

author's translations of a wide selection of Greek and Latin texts are accompanied by an introduction, explanatory commentary, and a full bibliography. An earlier version of this book was published twenty-five years ago by Prentice-Hall. In this new publication Professor Pollitt has added a considerable number of new passages, revised some of his earlier translations and presented the texts in a different order which allows the reader to follow

more easily the development of sculpture and painting as perceived by the ancient writers. The new and substantial bibliography, organised by topics as they appear in the book, emphasises works that deal directly with the literary sources or that supplement our knowledge of the personalities and monuments described in the sources. This collection will be welcomed by students and teachers of Greek art who have long been in need of an authoritative

and reliable sourcebook for their subject.

The complexities of financing, installing, implementing, and regulating public infrastructures, including empirical research, analytical models, and theoretical insights. Infrastructures—tangible, intangible, and institutional public facilities, from bridges to health care—are a vital precondition for economic and societal wellbeing. There has been an increasing awareness that we cannot rely on market forces for infrastructure

investment and maintenance. In this volume, experts from Europe, North and South America, and Asia examine the complexities of financing, installing, implementing, and regulating public infrastructures. Their contributions span a range of methodological approaches, including historical and empirical research, analytical models, theoretical analysis, and sector and regional case studies; they consider the economics of

infrastructure provisioning by government, through private-public partnerships, and privatization arrangements. The book first treats general investment, growth, and policy issues, and then offers sector-specific analyses of transportation, energy, telecommunications, and water infrastructures. The chapters cover topics that include the evolution of historical infrastructure; the relationships between the state and private finance in funding and

financing infrastructure; and the relevance of infrastructure for economic growth. Contributors Julio C. Aguirre, Laure Athias, Stephen J. Bailey, Sumedha Bajar, Biswa Nath Bhattacharyay, Federico Boffa, Daniel Danau, Sumit S. Document-Based Assessment for Global History Psychology Press
 Now in its 4th edition, this popular text offers practical, interesting, exciting ways to teach social studies and a multitude of instructional and professional resources for teachers. Theory, curriculum, methods, and assessment are woven into a comprehensive model for setting objectives; planning lessons, units,

and courses; choosing classroom strategies; and constructing tests for some of the field's most popular and enduring programs. The reflective and integrative framework emphasizes building imagination, insight, and critical thinking into everyday classrooms; encourages problem-solving attitudes and behavior; and provokes analysis, reflection, and debate. The text includes separate chapters on teaching each of the major areas of the social studies curriculum.

Throughout the text, all aspects of curriculum and instruction are viewed from a tripartite perspective that divides social studies instruction into didactic (factual), reflective (analytical), and affective (judgmental) components. These three components are seen as supporting one another, building the groundwork for taking stands on issues, past and present. At the center is the author's belief that the heart and soul of social studies instruction, perhaps all teaching, lies

in stimulating the production of ideas; looking at knowledge from others' viewpoints; and formulating for oneself a set of goals, values, and beliefs that can be explained and justified in open discussion. This book provides proof
of the existence and
explains the significance
of planned alignments
between classical temples
and oracle sites over a
wide range of territory,
pointing to an astrological
system of planning in the
ancient world. This
system of symbolism may
be used predictively and
is supported by all

relevant artifacts. Here is
a unifying approach to the
study of geomancy in the
ancient world as a whole.
Richer has found a
network of significant
geographic alignments,
associated with the
pathways of various
legendary figures and
gods, that are geomantic
keys to many legends and
texts. One of these texts
is Plato's Laws in which
Plato describes the layout
of the ideal city. Richer
found Plato's ideal city
repeated around the most
important oracular
centers on ancient

Greece. He shows how Plato's description was a later codification of a much earlier practice of dividing geography into twelve regions under the patronage of the gods of the zodiac. Several such twelve-part divisions of the Greek Territories are presented here.

Documents Suny Press
In this book, Professor East discusses the vital relationship between history and geographical conditions. Drawing examples from ancient times up to the present, he demonstrates that a

study of history must include consideration of the physical conditions under which an event occurs, and that "the particular characteristics of this setting serve not only to localise but also to influence part at least of the action." Topographical position, climate, distribution of water and minerals, the placement of routes and towns, and ease or difficulty of movement between districts and countries are among the factors which the historian must take into account. Book jacket.

 Social Studies
 This study presents a

wide range of documents on Greek social and political history from 800 to 399 BC (the archaic period to the death of Socrates). Evidence for developments within Greece during this period - in areas which include tyranny, the position of women, slavery, colonization, the city-state, and religion - is taken not only from historical sources, but from inscriptions, graffiti, law codes, epitaphs, decrees, drama and poetry. Each section covers sources not only

from the Greek mainland but from Greek settlements as far apart as Sicily and Italy, Cyrene, Egypt, Thrace, Asia Minor and the Black Sea.

Press

Ideal for high school and college students studying history through the everyday lives of men and women, this book offers intriguing information about the jobs that people have held, from ancient times to the 21st century.

- Provides detailed, interesting essays describing more than 300 professions and occupations across a broad range of eras, including the 21st century, and from around the world, which will give readers a wider

understanding of how people have supported themselves throughout time • Supplies historical primary documents that provide personal perspectives on past occupations • Offers fascinating information on how professions began, who did them, and continuity in occupations across time, such as that 18th-century journalists were often imprisoned for displeasing those in authority, and yet 21st-century U.S. journalists may still spend time in jail for refusing to reveal their

sources

Life Histories of North American Birds of Prey: Orders Falconiformes and Strigiformes e-arnow
A “landmark book”
(Robert J. Sternberg, president of the American Psychological Association)
by one of the world's preeminent psychologists that proves human behavior is not “hard-wired” but a function of culture. Everyone knows that while different cultures think about the world differently, they use the same equipment for doing their thinking. But

what if everyone is wrong? The Geography of Thought documents Richard Nisbett's groundbreaking international research in cultural psychology and shows that people actually think about—and even see—the world differently because of differing ecologies, social structures, philosophies, and educational systems that date back to ancient Greece and China. As a result, East Asian thought is “holistic”—drawn to the perceptual field as a whole and to relations

among objects and events within that field. By contrast, Westerners focus on salient objects or people, use attributes to assign them to categories, and apply rules of formal logic to understand their behavior. From feng shui to metaphysics, from comparative linguistics to economic history, a gulf separates the children of Aristotle from the descendants of Confucius. At a moment in history when the need for cross-cultural understanding and collaboration have never been more

important, The Geography of Thought offers both a map to that gulf and a blueprint for a bridge that will span it.
