The Science of Subjective Well-Being

SAGE Publications

Cognitive Psychology: Theory, Process, and Methodology introduces readers to the main topics of study in this exciting field through an engaging presentation of how cognitive processes have been and continue to be studied by researchers. Using a reader-friendly writing style and focusing on methodology, authors Dawn M. McBride and J. Cooper Cutting cover such core content as perception, attention, memory, language, reasoning and problem solving, and cognitive neuroscience. Updates to the Second Edition include a reorganization of long-

term memory topics to improve readability, revised pedagogical tools throughout, a refreshed visual program, and additional real-life examples to enhance understanding.

Foundations of Sensation and Perception Wadsworth Publishing Company

The science and practice of memory come to life with Bennett Schwartz' *Memory*, Second Edition. Integrated coverage of cognitive psychology and neuroscience throughout the text connect theory and research to the areas in the brain where memory processes occur, while unique applications of memory concepts to such areas as education, investigations, and courtrooms engage students in an exploration of how memory works in everyday life. Four themes create a framework for the text: the active nature

of learning and remembering; memory's status as a biological process; the multiple components of memory systems; and how memory principles can improve our individual ability to learn and remember. Substantive changes in each chapter and 156 new references bring this new edition completely up to date and offer students an array of high-interest examples for augmenting their own memory abilities and appreciation of memory science. *Foundations of Cognitive Psychology* SAGE The LNCS journal *Transactions on Computational Science* reflects recent developments in the field of Computational Science, conceiving the field not as a mere ancillary science but rather as an innovative approach supporting many other scientific disciplines. The journal focuses on original high-quality research in the realm of

computational science in parallel and distributed environments, encompassing the facilitating theoretical foundations and the applications of large-scale computations and massive data processing. It addresses researchers and practitioners in areas ranging from aerospace to biochemistry, from electronics to geosciences, from mathematics to software architecture, presenting verifiable computational methods, findings and solutions and enabling industrial users to apply techniques of leading-edge, large-scale, high performance computational methods. The fifth volume of the Transactions on Computational Science journal, edited by Yingxu Wang and Keith C.C. Chan, is devoted to the subject of cognitive knowledge representation. This field of study focuses on the internal knowledge representation mechanisms of the brain and how these can be applied to computer science and engineering. The issue includes the latest research results in internal knowledge representation at the logical, functional, physiological, and biological levels and describes their impacts on computing, artificial intelligence, and computational intelligence.

The Psychology of Chess Wadsworth Publishing Company

Do you need to be a genius to be good at chess? What does it take to become a Grandmaster? Can computer programmes beat human intuition in gameplay? The Psychology of Chess is an insightful overview of the roles of intelligence, expertise, and human intuition in playing this complex and ancient game. The book explores the idea of 'practice makes perfect', alongside accounts of why men perform better than women in international rankings, and why chess has become synonymous with extreme intelligence as well as madness. When artificial intelligence researchers are increasingly studying chess to develop machine learning, The Psychology of Chess shows us how much it has already taught us about the human mind.

Best-selling author James W. Neuliep presents a clear model for examining communication within a variety of contexts, including cultural, microcultural, environmental, sociorelational, and perceptual. Each chapter focuses on one context and explores the combination of factors within that context, including setting, situation, and circumstances. The updated Eighth Edition reflects the most recent research in the field and further incorporates the role of modern technology and its impact on intercultural communication.

23rd HCI International Conference, HCII 2021, Virtual Event, July 24-29, 2021 Proceedings Routledge

In this fully updated Fourth Edition of Intercultural Communication, author James W. Neuliep provides a clear contextual model (visually depicted by a series of concentric circles) for examining communication within cultural, microcultural, environmental, sociorelational, and perceptual contexts.

Beginning with the broadest context-the cultural component of the model-the book progresses chapter by chapter through the model, to the most specific traits of communication, verbal and nonverbal messages. Each chapter focuses on one context and explores the combination of factors within that context, including setting, situation, and circumstances. Highlighting values, ethnicity, physical geography, and attitudes, the book examines means of interaction, including body language, eye contact, and the exchange of words, as well as the stages of relationships, cross-cultural management, intercultural conflict, and culture shock. Features Features a new chapter on Cross-Cultural Conflict (Chapter 10) that includes discussions of face-negotiation theory, facework and facework strategies, conflict communication styles, and cultural preferences for conflict styles Includes new sections on White/European American culture, an expanded discussion of Arab Americans, new material on Indian culture, and an expanded discussion on Chinese groups and communication, especially as it pertains to the business world Includes new discussion questions at the end of each chapter that ask students to critically think about the chapter material Offers realistic, cross-cultural dialogues throughout the book to demonstrate how key theoretical concepts manifest themselves in human interaction. Includes self-assessment instruments that measure concepts such as intercultural communication apprehension, ethnocentrism, individualism, and collectivism to help students understand themselves and evaluate their skill development

Cognitive Psychology: Pearson New International Edition Wiley

In the new edition of this original and penetrating book, John D. Greenwood provides an in-depth analysis of the subtle conceptual continuities and discontinuities that inform the history of psychology from the speculations of the Ancient Greeks to contemporary cognitive psychology. He also demonstrates the fashion in which different conceptions of human and animal psychology and behavior have become associated and disassociated over the centuries. Moving easily among psychology, history of science, physiology, and philosophy, Greenwood provides a critically challenging account of the development of psychology as a science. He relates the remarkable stories of the intellectual pioneers of modern psychology, while exploring the social and political milieu in which they operated, and dispels many of the myths of the history of

psychology, based upon the best historical scholarship of recent decades. This is an impressive overview that will appeal to scholars and graduate students of the history of psychology.

Cognitive Science SAGE

This authoritative volume reviews the breadth of current scientific knowledge on subjective well-being (SWB): its definition, causes and consequences, measurement, and practical applications that may help people become happier. Leading experts explore the connections between SWB and a range of intrapersonal and interpersonal phenomena, including personality, health, relationship satisfaction, wealth, cognitive processes, emotion regulation, religion, family life, school and work experiences, and culture. Interventions and practices that enhance SWB are examined, with attention to both their benefits and limitations. The concluding chapter from Ed Diener dispels common myths in the field and presents a thoughtful agenda for future research.

Cognitive Psychology In and Out of the Laboratory Routledge

This highly respected, best-selling text offers students an enjoyable, extraordinarily well-written introduction to the Psychology of Women. Appropriate for students from a wide variety of backgrounds, this comprehensive book captures women's own experiences through direct quotations and an emphasis on empirical research. Meticulously updated to reflect the most current research, *PSYCHOLOGY OF WOMEN* was written with a genuine interest in and understanding of the students for whom the book is written. Her text includes a chapter on old age as well as discussions of topics such as welfare issues, and pregnancy and women's retirement, which are central in many women's lives, but not consistently covered in other texts.

The Teaching of Psychology Academic Press

A comprehensive book supported by extensive research studies and data, Bjorklund's text presents the broadest coverage of topics in cognitive development. Unlike other books, Bjorklund shows readers how developmental function can help explain individual differences in cognition by covering both the typical pattern of change in thinking observed over time and the individual differences in children's thinking in infancy and childhood. A major

theme of this book is the continuous transaction between the child embedded in a social world: although a child is born prepared to make some sense of the world, his or her mind is also shaped by forces in the physical and social environment.

An Introduction to the Study of Mind Pearson Higher Ed

The cognitive science of religion is a relatively new academic field in the study of the origins and causes of religious belief and behaviour. The focal point of empirical research is the role of basic human cognitive functions in the formation and transmission of religious beliefs. However, many theologians and religious scholars are concerned that this perspective will reduce and replace explanations based in religious traditions, beliefs, and values. This book attempts to bridge the reductionist divide between science and religion through examination and critique of different aspects of the cognitive science of religion and offers a conciliatory approach that investigates the multiple causal factors involved in the emergence of religion.

Theory, Process, and Methodology Guilford Press

Learning & Memory Psychology Press

Modern psychology has become a broad and fragmented collection of research areas, theoretical orientations, and professional organizations. The author, who believes integration within the discipline is critical, makes the case that its empirical and theoretical aspects can be unified under the umbrella of adaptation. The principles of learning, and the characteristics of memory and language—our adaptation to a challenging environment—are pertinent to all we do, and the sciences of learning and cognition are the subject areas most relevant to these proximate behavior–environment relationships. Because the adaptability of a behavior is often tied to its function, the author's functional perspective serves as a helpful organizational tool for studying the otherwise disparate aspects of learning and cognition—thinking, memory, conceptual behavior, and language. New to this edition is an emphasis on applied behavior analysis, a rapidly growing and credentialed profession. Updated pedagogical features include opening chapter vignettes, interim summaries and review questions, improved graphics, and a full glossary of key terms.
