Lecture Slides By Mehmet Kanoglu Copyright The McGraw

Examine the moving boundary work or $P dV$ work commonly encountered in reciprocating devices such as automotive engines and compressors.

Identify the first law of thermodynamics as simply a statement of the conservation of energy principle for closed (fixed mass) systems. Develop the general energy balance applied to closed systems.

Objectives. Evaluate the performance of gas power cycles for which the working fluid remains a gas throughout the entire cycle. Analyze vapor power cycles in which the working fluid is alternately vaporized and condensed.
