The diagnosis of brain death should be based on a simple premise. If every possible confounder has been excluded and all possible treatments have been tried or considered, irreversible loss of brain function is clinically recognized as the absence of brainstem reflexes, verified apnea, loss of vascular tone, invariant heart rate, and, eventually, cardiac standstill. This condition cannot be reversed – not even partly – by medical or surgical intervention, and thus is final. Many countries in the world have introduced laws that acknowledge that a patient can be declared brain-dead by neurologic standards. The U.S. law differs substantially from all other brain death legislation in the world because the U.S. law does not spell out details of the neurologic examination. Evidence-based practice guidelines serve as a standard. In this chapter, I discuss the history of development of the criteria, the current clinical examination, and some of the ethical and legal issues that have emerged. Generally, the concept of brain death has been accepted by all major religions. But patients' families may have different ideas and are mostly influenced by cultural attitudes, traditional customs, and personal beliefs. Suggestions are offered to support these families.

**PREFACE TO THE SECOND EDITION** The need for a thorough understanding of medical terminology has not diminished in the least for pharmacists and other health care practitioners in the five years between the publication of the first edition of this book and this second edition. If anything, it has become greater. The pharmacy profession has further solidified its clinical role in patient care, and pharmacists are more entrenched than ever before in the role of counselor and advisor to both patients and practitioners alike. For more than a few pharmacists, what not long ago was an occasional question from a physician about appropriate drug therapy has become regular consultation concerning the interaction of drugs with the patient, his life, and the many other therapies he may be facing. Pharmacy chains, which not long ago installed glass walls to separate the pharmacist from customers, have asked technicians to count pills while pharmacists are in continuous contact with the patient. Such practice changes have increased the demand for clinical knowledge among pharmacists, including a knowledge of medical terminology, and those demands have been passed on to the authors in preparation of the second edition of this book. While the role of the text is still to help pharmacists be more effective interpreters and counselors, some changes have been made in response to reader requests.

This 2nd Edition contains a wealth of new material and 46 expanded chapters including Information on Minor Injuries and Illness, Lifesaving Surgery, Environmental Problems and Tactical Considerations Life is uncertain, people who are involved in survival situations, disasters and accidents are often unprepared both in knowledge and supplies. This book is intended to give you grounding in medical care and encourage you to prepare supplies suitable to your level of knowledge and likely situations you may encounter. It is hoped it will be useful to those who partake in extreme and wilderness sports and activities as well as those who are interested in survivalism and preparedness. Chris Breen is a Registered Nurse who served with the RAMC, a Paramedic and Clinical Tutor with additional qualifications in Trauma and Remote Medicine. He has had a long term interest in Survival medicine and is the Medical Advisor for a Preparedness group and runs courses in Survival Medicine. Craig Ellis is a Medical doctor who trained as a Specialist Emergency Physician. He has a special interest in austere medicine and medical practice during prolonged disasters. He has both worked and taught austere medical practice. The contents of this book are derived from a number of articles which have been published online

and the syllabus of Wilderness and Survival Medicine Course they run. The aim of this work is to provide the lay person with the knowledge and skills to deal with a variety of medical conditions and traumatic injuries usually dealt with by Health Care Professionals. Equipment, medical supplies and initial first aid treatment is covered, if the injury or illness would benefit from more advanced measures then these are detailed as well as any skills needed to carry them out. We will also look at aftercare and the limitations of care without the benefit of a modern health service.
