device!In AP Biology: 21 Must Know Concepts to Ace the Test, you'll learn many of the most frequently tested concepts for AP Biology, including but not limited to Endosymbiosis, the Hardy Weinberg Equation, and Mendelian Genetics. This book covers not only what these concepts are, but why they is important in the context of AP Biology. These articles were originally posted on the Learnerator blog and were compiled in no particular order.If you feel like you have no idea where to start when it comes to AP Biology prep, read this book to begin understanding 21 key concepts for the AP Biology exam. Grab your copy today. Here is a preview of what is inside this book: Introduction Abiogenesis Anaerobic Respiration Animal Behavior Cell Organelles Diffusion & Osmosis Dissolved Oxygen DNA Replication Endocrine System Endosymbiosis Enzymes Hardy Weinberg Equation Heredity Immune Systems Kingdoms Krebs Cycle Lipids Mendelian Genetics Mitosis and Meiosis Nucleic Acids Scientific Method Transcription and Translation Conclusion An excerpt from the book: Anaerobic respiration is how cells make energy when, as you may have guessed from the name, there is no available oxygen. In fact, for this process there is neither oxygen nor mitochondria present. The two

processes that allow this to work are those of glycolysis and fermentation.In cellular respiration, what we normally see is glucose breaks down to pyruvate and from this process we net 2 ATP. Next, the pyruvate will go into the mitochondria and enter the Krebs cycle. In the process of being converted to acetyl CoA, CO2 is given off and another 2 ATP are made. This energy is stored in NADH and FADH2. Their electrons move into the electron transport chain which will move to oxygen to transform the product to water. In this, 23-34 ATP are made. This manual contains 24 labs and is aligned with the first year college/advanced placement level high school biology curriculum, standards, and science practices. There are eight main lab investigations (two for each AP® Bio Big Idea), each including a student guided inquiry.1. DIFFUSION AND OSMOSISSurface area and cell size, modeling, osmosis in live water plant cells2. CHANGES WITHIN POPULATIONSPTC taste test global analysis, simulations of changes within populations (Equilibrium, Natural Selection, Genetic Drift); mathematical modeling of allele frequencies within a population3. EVOLUTIONARY RELATIONSHIPSCladogr

am construction, biochemical analyses of gene and protein sequence % similarities and differences; BLAST database tutorial and cladogram construction for comparing evolutionary relationships; Entrez Gene database tutorial comparing normal gene sequences to chromosomal aberrations in human diseases4. MITOSIS and MEIOSISLoss of cell cycle control analysis in cancer cells using human karyotypes; environmental abiotic effects on mitotic rates and data analysis for significance; student guided inquiry on environmental effects on mitosis; and crossing over in meiosis demonstrating increased genetic variability in subsequent generations.5. ENZYME ACTIVITYCatalase enzyme and breakdown of toxins in the liver; enzyme specificity using lactase; enzyme rates of reaction assay and baseline; effects of pH on enzymatic activity; and student guided inquiry for other potential environmental effects on enzyme activity.6. PHOTOSYNTHESIS AND CELLULAR RESPIRATIONPredictions on effect of different abiotic conditions on photosynthesis and the effect of exercise on cellular respiration waste product production rates; measuring photosynthesis and cellular respiration rates using the Floating Leaf Disk technique7. BIOTECHNOLOGY - BACTERIAL

TRANSFORMATIONBiotechnology simulation of transforming the human insulin-making gene into a bacterial plasmid; bacterial transformation of the jellyfish gene for green fluorescence into E.coli; transformation efficiency calculations; and student guided inquiry of the newly transformed bacterial colonies.8. ENERGY DYNAMICSEnvironmental impact of eating at lower trophic levels; energy transfer and productivity lab using yeast fermentation of corn sugar into ethanol and carbon dioxide; and student guided inquiry on variables that could potentially increase the rate of fermentation for biofuel production. Diffusion and Osmosis, Investigation AP Biology Lab. 1Diffusion and Osmosis, InvestigationConcepts of BiologyConcepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why

biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand.We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.Biology for AP ® CoursesBiology for AP® courses covers the scope and sequence requirements of a typical two-semester Advanced Placement® biology course. The text provides comprehensive coverage of foundational research and core biology concepts through an evolutionary lens. Biology for AP® Courses was designed to meet and exceed the requirements of the College Board’s AP® Biology framework while

allowing significant flexibility for instructors. Each section of the book includes an introduction based on the AP® curriculum and includes rich features that engage students in scientific practice and AP® test preparation; it also highlights careers and research opportunities in biological sciences.AP Biology: 21 Must Know Concepts to Ace the TestLearn Key AP Biology Concepts in Under an Hour!Read on your PC, Mac, smartphone, tablet or Kindle device!In AP Biology: 21 Must Know Concepts to Ace the Test, you'll learn many of the most frequently tested concepts for AP Biology, including but not limited to Endosymbiosis, the Hardy Weinberg Equation, and Mendelian Genetics. Due to their vital involvement in a wide variety of housekeeping and specialized cellular functions, exocytosis and endocytosis remain among the most popular subjects in biology and biomedical sciences. Tremendous progress in understanding these complex intracellular processes has been achieved by employing a wide array of research tools ranging

from classical biochemical methods to modern imaging techniques. In Exocytosis and Endocytosis, skilled experts provide the most up-to-date,step-by-step laboratory protocols for examining molecular machinery and biological functions of exocytosis and endocytosis in vitro and in vivo. Following the highly successful Methods in Molecular BiologyTM series format, the chapters present an introduction outlining the principle behind each technique, a list of the necessary materials, an easy to follow, readily reproducible protocol, and a Notes section offering tips on troubleshooting and avoiding known pitfalls. Insightful to both newcomers and seasoned professionals, Exocytosis and Endocytosis offers a unique and highly practical guide to versatile laboratory tools developed to study various aspects of intracellular vesicle trafficking in simple model systems and living organisms.
