MIDDLETON GLOVER

Coherence in Three-Dimensional Category Theory
Ohio University Press

The classic text on the craft of Method acting by the founder of The American Laboratory Theatre. After studying at the Moscow Art Theatre under Konstantin Stanislavski, Richard Boleslavsky became one of the most important acting teachers of his or any generation. Bringing Stanislavski's system to America in the

1920s and 30s, he influenced many of the titans of American drama, from his own students—including Lee Strasburg and Stella Adler—to Marlon Brando, Paul Newman, and many others. In *Acting: The First Six Lessons*, Boleslavsky presents his acting theory and technique in a series of accessible and engaging dialogues. Widely considered a must-have for any serious actor, Boleslavsky's work has long helped actors better understand their craft.

[Advances in Systems, Control and Automation](#) Brill / Sense

This dictionary lists acronyms and

abbreviations occurring with a reasonable frequency in the literature of medicine and the health care professions. Abbreviations and acronyms are given in capital letters, with no punctuation, and with concise definitions. The beginning sections also include symbols, genetic symbols, and the Greek alphabet and symbols.

A Short History of English Literature
Academic Press

Medical acronyms and abbreviations offer convenience, but those countless shortcuts can often be confusing. Now a part of the popular Dorland's suite of

products, this reference features thousands of terms from across various medical specialties. Its alphabetical arrangement makes for quick reference, and expanded coverage of symbols ensures they are easier to find. Effective communication plays an important role in all medical settings, so turn to this trusted volume for nearly any medical abbreviation you might encounter. Symbols section makes it easier to locate unusual or seldom-used symbols. Convenient alphabetical format allows you to find the entry you need more intuitively. More than 90,000 entries and definitions. Many new and updated entries including terminology in expanding specialties, such as Nursing; Physical, Occupational, and Speech Therapies; Transcription and Coding; Computer and Technical Fields. New section on abbreviations to avoid, including Joint Commission abbreviations that are not to be used. Incorporates updates suggested by the Institute for Safe Medication Practices (ISMP).

Walker's Expedition to Nicaragua

American Mathematical Soc.

The major focus of this Handbook is the design and potential of IT-based student

learning environments. Offering the latest research in IT and the learning process, distance learning, and emerging technologies for education, these chapters address the critical issue of the potential for IT to improve K-12 education. A second important theme deals with the implementation of IT in educational practice. In these chapters, barriers and opportunities for IT implementation are studied from several perspectives. This Handbook provides an integrated and detailed overview of this complex field, making it an essential reference.

Narrative and Genre Cambridge University Press

This book presents 29 revised invited and selected lectures given by top-researchers at the First International Workshop on Intercultural Collaboration, IWIC 2007, held in Kyoto, Japan. This state-of-the-art survey increases mutual understanding in our multicultural world by featuring collaboration support, social psychological analyses of intercultural interaction, and case studies from field workers.

Oil Hydraulic Systems Humana

Publisher's Note: Products purchased from Third Party sellers are not guaranteed by

the publisher for quality, authenticity, or access to any online entitlements included with the product. A hydraulic system transmits force from one point to another using an incompressible fluid. The fluid is almost always oil and the force is almost always multiplied in the process.

Nowadays, it is very easy to add force multiplication (or division) to the system. Hydraulic systems are extensively used in machine tools, material devices, transport and other mobile equipment. Written for design engineers and maintenance personnel *Oil Hydraulic Systems: Principles and Maintenance* provides the necessary tools for installation, operation and maintenance of hydraulic equipment. The book touches on such subjects as: hydraulic system maintenance, repair and reconditioning, seals and packing, hydraulic pipes, hoses and fitting, design of hydraulic circuits.

Dictionary of Medical Acronyms and Abbreviations Springer Science & Business Media

Successful costume design requires a solid foundation in general artistic principles and specific knowledge of how to apply those principles. Cunningham presents

readers with just such a foundation and develops it to expose beginning costume designers to the myriad skills they need to develop in order to costume successful stage productions. She begins at the most basic conceptual level—reading plays from a costume designer's perspective. She then follows through with the practical considerations that must be considered at every stage of the costuming process—research, development, sketching, and costume construction. Cunningham has built on the long-standing success of the outstanding first edition with new figures and updates throughout the text, including 24 pages in full color. Examples have been selected from a wide range of stage productions representing a variety of designers, styles, and approaches. Interviews with award-winning designers from stage, film, and other media show the practical importance of the book's concepts. Every chapter incorporates material reflecting the ever-increasing impact of technology, especially computers, on costuming. Immediately Sequential Bilateral Cataract Surgery (ISBCS): Global History and Methodology is a comprehensive guide for the safe and efficient performance of ISBCS. It provides an overview of the history, recommended protocols, necessary precautions, exclusion criteria, benefits and risks associated with this procedure, organizational standards, and more. Written by the most prominent ISBCS surgeons in the world, chapters recount the arguments for and against

bilateral surgery that have been made throughout the ages, up to the present, and deliver achieved and proposed resolutions to all problems discussed. Topics such as ethics and medico-legal issues surrounding ISBCS are also discussed, and a chapter on the global evolution of bilateral cataract surgery provides readers with a complete overview of the development of ISBCS practices in countries from all continents. Provides a comprehensive history and current status of ISBCS globally Provides step-by-step recommendations and precautions necessary to perform ISBCS safely, including detailed discussion of surgical infection prophylaxis with antibiotics delivered into the eye at surgery Reviews and explains the patient benefits associated with ISBCS Covers development of ISBCS practices worldwide *International Handbook of Information Technology in Primary and Secondary Education* Springer
Foundations of higher dimensional category theory for graduate students and researchers in mathematics and mathematical physics. *Co-Clustering* Springer

Curriculum problems are everywhere: alert observers with a practiced eye and educated mind will find it almost impossible to read a newspaper without discovering curricular issues. The media often report about educational reforms or even about curriculum wars with opposing parties fiercely debating the aims, content and organization of learning. Few people analyze these trends and discussions from a curricular conceptual framework. In addition, people sometimes think that their curriculum approaches and problems are unique and context-specific. However, international experience shows us that we can learn a lot from curriculum issues elsewhere. This book aims to sharpen the eyes and minds of a broader audience in identifying, understanding, addressing and reflecting upon curriculum problems. It also aims to contribute to the increased exchange, discussion and reflection on all the current curriculum problems that form such a crucial part of learning worldwide.

Vedic Addition Waveland Press

This book represents the most comprehensive and up-to-date collection of information on the topic of computational molecular biology. Bringing

the most recent research into the forefront of discussion, *Algorithms in Computational Molecular Biology* studies the most important and useful algorithms currently being used in the field, and provides related problems. It also succeeds where other titles have failed, in offering a wide range of information from the introductory fundamentals right up to the latest, most advanced levels of study.

Noncommutative Localization in Algebra and Topology John Wiley & Sons

This fully updated book collects numerous data mining techniques, reflecting the acceleration and diversity of the development of data-driven approaches to the life sciences. The first half of the volume examines genomics, particularly metagenomics and epigenomics, which promise to deepen our knowledge of genes and genomes, while the second half of the book emphasizes metabolism and the metabolome as well as relevant medicine-oriented subjects. Written for the highly successful *Methods in Molecular Biology* series, chapters include the kind of detail and expert implementation advice that is useful for getting optimal results. Authoritative and practical, *Data Mining*

for *Systems Biology: Methods and Protocols*, Second Edition serves as an ideal resource for researchers of biology and relevant fields, such as medical, pharmaceutical, and agricultural sciences, as well as for the scientists and engineers who are working on developing data-driven techniques, such as databases, data sciences, data mining, visualization systems, and machine learning or artificial intelligence that now are central to the paradigm-altering discoveries being made with a higher frequency.

Algebraic Groups and Their Generalizations: Quantum and Infinite-Dimensional Methods

Mometrix Media LLC

Cluster or co-cluster analyses are important tools in a variety of scientific areas. The introduction of this book presents a state of the art of already well-established, as well as more recent methods of co-clustering. The authors mainly deal with the two-mode partitioning under different approaches, but pay particular attention to a probabilistic approach. Chapter 1 concerns clustering in general and the model-based clustering in particular. The authors briefly review the

classical clustering methods and focus on the mixture model. They present and discuss the use of different mixtures adapted to different types of data. The algorithms used are described and related works with different classical methods are presented and commented upon. This chapter is useful in tackling the problem of co-clustering under the mixture approach. Chapter 2 is devoted to the latent block model proposed in the mixture approach context. The authors discuss this model in detail and present its interest regarding co-clustering. Various algorithms are presented in a general context. Chapter 3 focuses on binary and categorical data. It presents, in detail, the appropriated latent block mixture models. Variants of these models and algorithms are presented and illustrated using examples. Chapter 4 focuses on contingency data. Mutual information, phi-squared and model-based co-clustering are studied. Models, algorithms and connections among different approaches are described and illustrated. Chapter 5 presents the case of continuous data. In the same way, the different approaches used in the previous chapters are extended to this situation.

Contents 1. Cluster Analysis. 2. Model-Based Co-Clustering. 3. Co-Clustering of Binary and Categorical Data. 4. Co-Clustering of Contingency Tables. 5. Co-Clustering of Continuous Data. About the Authors Gérard Govaert is Professor at the University of Technology of Compiègne, France. He is also a member of the CNRS Laboratory Heudiasyc (Heuristic and diagnostic of complex systems). His research interests include latent structure modeling, model selection, model-based cluster analysis, block clustering and statistical pattern recognition. He is one of the authors of the MIXMOD (MIXtureMODelling) software. Mohamed Nadif is Professor at the University of Paris-Descartes, France, where he is a member of LIPADE (Paris Descartes computer science laboratory) in the Mathematics and Computer Science department. His research interests include machine learning, data mining, model-based cluster analysis, co-clustering, factorization and data analysis. Cluster Analysis is an important tool in a variety of scientific areas. Chapter 1 briefly presents a state of the art of already well-established as well more recent methods.

The hierarchical, partitioning and fuzzy approaches will be discussed amongst others. The authors review the difficulty of these classical methods in tackling the high dimensionality, sparsity and scalability. Chapter 2 discusses the interests of coclustering, presenting different approaches and defining a co-cluster. The authors focus on co-clustering as a simultaneous clustering and discuss the cases of binary, continuous and co-occurrence data. The criteria and algorithms are described and illustrated on simulated and real data. Chapter 3 considers co-clustering as a model-based co-clustering. A latent block model is defined for different kinds of data. The estimation of parameters and co-clustering is tackled under two approaches: maximum likelihood and classification maximum likelihood. Hard and soft algorithms are described and applied on simulated and real data. Chapter 4 considers co-clustering as a matrix approximation. The trifactorization approach is considered and algorithms based on update rules are described. Links with numerical and probabilistic approaches are established. A

combination of algorithms are proposed and evaluated on simulated and real data. Chapter 5 considers a co-clustering or bi-clustering as the search for coherent co-clusters in biological terms or the extraction of co-clusters under conditions. Classical algorithms will be described and evaluated on simulated and real data. Different indices to evaluate the quality of coclusters are noted and used in numerical experiments.

Image and Representation Bloomsbury Publishing

In this book, 18 leading curriculum scholars since 1970 who remain influential today present the fascinating stories of their lives and important new contributions to the field. They trace their early experiences in teaching and curriculum development, creative directions in their work, mature ideas and perceptions of future directions for the field. Each chapter contains a list of works chosen by the authors as their personal favorites. [Leaders in Curriculum Studies: Intellectual Self-Portraits] offers an ideal companion to courses in curriculum studies and a guide

for scholars seeking to understand the main currents in this field today. In a single volume it presents a bird's eye view of the entire field as told in the words of its leading figures. --Publisher description. *Lectures in Geometry* John Wiley & Sons Having spent the last thirty years researching, thinking and writing about some of the key issues in education, Professor Ivor Goodson presents twenty of his most important writings in this single volume.

Acting Psychology Press

Serves as an introduction to higher categories as well as a reference point for many key concepts in the field.

Dorland's Dictionary of Medical Acronyms and Abbreviations E-Book Cambridge University Press

The Supervisory Test Battery (STB) Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study. It provides hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: problem solving; interpersonal skills;

human resource management; managerial decisions; staff interaction and management; and more.

Firefighter Exam, New Jersey Columbia University Press

This comprehensive reference consists of 18 chapters from prominent researchers in the field. Each chapter is self-contained, and synthesizes one aspect of frequent pattern mining. An emphasis is placed on simplifying the content, so that students and practitioners can benefit from the book. Each chapter contains a survey describing key research on the topic, a case study and future directions. Key topics include: Pattern Growth Methods, Frequent Pattern Mining in Data Streams, Mining Graph Patterns, Big Data Frequent Pattern Mining, Algorithms for Data Clustering and more. Advanced-level students in computer science, researchers and practitioners from industry will find this book an invaluable reference.
