 In contrast with other typical textbooks, Cotton-Wilkinson's Advanced Inorganic Chemistry is organized by elements, describing all the typical compounds for each element, going through bonding and reactivity. This arrangement makes it the absolute best book for just picking it up and starting to get into the inorganic chemistry of one element you are particularly interested in.

 Among college students, Cotton is perhaps best known as the coauthor of the textbook Advanced Inorganic Chemistry, now in its sixth English edition. Coauthored with his thesis advisor, Sir Geoffrey Wilkinson, and now with coauthors Carlos Murillo and Manfred Bochmann, the textbook is colloquially known as "Cotton and Wilkinson." The text surveys coordination chemistry, cluster chemistry, homogeneous catalysis, and organometallic chemistry.
