The Fourth Industrial Revolution is now
transforming logistics and supply chain

industries. Consumer habits are changing fast and supply chains are having to adapt to meet the challenges created by this dynamic new environment. Traditional logistics operating models are under threat. Incumbent freight operators across the entire transport and warehousing spectrum have been forced to develop strategies to effectively compete with new start-ups. The Logistics and Supply Chain Innovation Handbook provides a comprehensive overview of all the major new technologies and business models currently under development and looks at this process of disruption in detail. The Logistics and Supply Chain Innovation Handbook covers many important topics, such as crowd sourcing and shipping, on-demand delivery,

autonomous vehicles, automation in the warehouse, electric vehicles and alternative fuels. It provides readers with a straightforward and easy to understand assessment of these innovations and their impact on the industry. Online supporting resources include PowerPoints and sample case studies.

For any business involved in today's supply chains, logistics services are critical. Companies have to decide whether to retain their own logistics operations or place their trust in third-party suppliers. This potential move away from the traditional approach of managing these processes internally can lead to improved service and reduced

cost although this isn't always the case. The Logistics Outsourcing Handbook provides step by step guidance on the process of logistics outsourcing and explains how to apply this information for commercial success. Vital advice is given on benchmarking existing operations, how to shortlist companies, produce a request for a proposal, choose the optimum supplier and implement and manage the contract. The Logistics Outsourcing Handbook analyses outsourcing from both an industry wide perspective, while also drilling down into specific individual considerations. The book provides valuable guidance in terms of contractual relationships, cost models and the integration of information technology systems. By analysing current statistics and surveys,

looking into factors behind why contracts are awarded and terminated important insights can be acquired. This book contains tools, models, online resources and case studies on the outsourced relationships of companies including Intel KFC and BA to further develop the reader's knowledge which makes this book an informative and essential resource.

International trade has grown rapidly over the past half century, accommodated by the transportation

industry through concomitant growth and technological change. But while the connection between transport and trade flows is clear, the academic literature often looks at these two issues separately. This Handbook is unique in pulling together the key insights of each field while highlighting what we know about their intersection and ideas for future research in this relatively unexamined but growing area of study.

Logistics, Shipping and Supply Chain

Management is an emerging subject of importance in an emerging country like India and similar economies. Since India is at the cusp of being a developed nation and subjects like Logistics are still at the infancy stage, lot of Universities and Institutes in India have started including these subjects at the Bachelors, Masters and diploma levels of Business Administration, Management Science, Commerce and Export & Import related subjects and this book will have, I hope, tremendous interests among the practitioners, young students and the academia not only for the global community but Indian sub-continent and South East Asia specifically. Since now, after more than 30 years of professional life, I am a visiting faculty member of various Universities and Institutes, I felt

that there is dearth of proper books in this field, and I felt it as my humble duty to share whatever limited knowledge with the young students who were never exposed to subjects like Shipping, Logistics, Supply Chain Management, Commerce, Export Import Trade and their operational and legal aspects. If this book also assist the faculty members even in a limited way, then my humble efforts are fulfilled. Although there are lot of people worldwide who has guided and helped me during my career in India and abroad, to name them is a huge task. But I can't forget the help and guidance given to me during my professional life in Germany by Mr. Herbert Poetschke, Hapag Lloyd AG, Hamburg, Mr. Christian Conen, VLA-Vereinigte Linen Agenturen GmbH,

Bremen and specially my well wishers in India Mr. K.C. Raman, former Director of Forbes Gokak, and Mr. Shantanu Bhatkamkar, Chairman of the ATC Logistics Group, Mumbai. But it was the persuasion from one of my cousins and a friend, Mr. Sam G. Nilamel of Nilamel Exports, an industrialist in Kerala and Kuwait, who always prompted me to write a book. Though in I have commenced this hilarious exercise of bringing out this comprehensive handbook on Logistics and Shipping couple of years back, it was a tremendous task to write, re-write, revise and edit this volume. After the main script is finalized, it is my daughter Aatira Benn John who helped me in formatting and designing this book in its present form and I am thankful to her.
