Asking Good Questions moves beyond a traditional discussion of ethical theory, focusing on how educators can use these important frameworks to facilitate critical thinking about real-life ethical dilemmas. In this way, authors Nancy Stanlick and Michael Strawser offer students a theoretical tool kit for creatively addressing issues that influence their own environments. This text begins with a discussion of key ethical theorists and then guides the reader through a series of original case studies and follow-up

activities that facilitate critical thinking, emphasize asking thought provoking questions, and teach the student to address the complexity of ethical dilemmas while incorporating the viewpoints of their peers. Additionally, Stanlick and Strawser include an extensive preface, a mind-mapping technique for analyzing and formulating arguments, and a six step process for approaching complex real-life moral issues. Each chapter incorporates suggested assignments, discussion questions, and references for further reading, and a guide for instructors offering a sample course schedule and suggestions on how to use this book effectively is also available. It is also a tool to support instruction, debate, and dialogue regarding public health ethics. Although the practice of public health has always included consideration of ethical issues, the field of public health ethics as a discipline is a relatively new and emerging area. There are few practical training resources for public health practitioners, especially resources which include discussion of realistic cases which are likely to arise in the practice of public health. This work discusses these issues on a case to case basis and helps create awareness and understanding of the ethics of public health care. The main audience for the casebook is public health practitioners, including front-line workers, field epidemiology trainers and trainees, managers, planners, and decision makers who have an interest in learning about how to integrate ethical analysis into their day to day public health practice. The casebook is also useful to schools of public health and public health students as well as to academic ethicists who can use the book to teach public health ethics and distinguish it from clinical and research ethics.

Most mental health professionals and behavioral scientists enter the field with a strong desire to help others, but clinical practice and research endeavors often involve decision-making in the context of ethical ambiguity. Good intentions are important, but unfortunately, they do not always protect the practitioner and client from breaches in ethical conduct. Academics, researchers, and students also face a range of ethical challenges from the classroom to the laboratory. Now in a new expanded edition, *Ethics in Psychology and the Mental Health Professions*, the most widely read and cited ethics textbook in psychology, has emerged with a broadened scope extending across the mental health and behavioral science fields. The revised volume considers many of the ethical questions and dilemmas that mental health professionals encounter in their everyday practice, research, and teaching. The book has been completely updated and is now also relevant for counselors, marriage and family therapists, social workers, and psychiatrists, and includes the ethics codes of those groups as appendices. Providing both a critical assessment and elucidation of key topics in the APA's guidelines, this comprehensive volume takes a practical approach to ethics and offers constructive means for both preventing problems, recognizing, approaching, and resolving ethical predicaments. Written in a highly readable and accessible style, this new edition retains the key features which have contributed to its popularity, including hundreds of case studies that provide illustrative guidance on a wide variety of topics, including fee setting, advertising for clients, research ethics, sexual attraction, how to confront observed unethical conduct in others, and confidentiality, among others. *Ethics in Psychology and the Mental Health Professions* will be important reading for practitioners and students-in training. Real-life, comprehensive and interesting cases are drawn from the fields of child welfare, family practice, medical social work, and social justice, among others. In response to student demand for a casebook that relates directly to situations they might encounter in the field, this text includes 30 student-contributed ethics cases. Useful and practical examples of ethical problems, information needed to achieve proper resolution, and the students' thought processes were edited to support and reflect the six Ethical Standards in the new NASW Code of Ethics.

Ethical conflicts rarely involve clear-cut choices. Decision making in ambiguous circumstances challenges personal values and professional ethics. The fog of politics, personal bias, and past experiences factor into the choices made. The goal of this compelling collection of cases is to stimulate reflection about the ethical dilemmas encountered in interactions. Thought-provoking case studies address police misconduct, protests and civil unrest, school resource officers, questionable prosecutorial practices, the challenges of a pandemic for prisons, the influence of politics, ethnic/gender/sexual preference bias, family conflict, immigration, perceptions of terrorism, and executing someone who may be innocent. The experiential approach presents readers

with opportunities to think about decisions they might have to make as criminal justice professionals. People employed in criminal justice have a great deal of power and discretion, which can be used ethically or unethically. Introductions to the sections on law enforcement, the courts, corrections, and juvenile justice provide background for analyzing the hypothetical scenarios. Case commentaries and questions provoke discussion about potential courses of action and the consequences of various choices.

The Ethics of Teaching, 5th Edition John Wiley & Sons

This book is a collection of fictionalised case studies of everyday ethical dilemmas and challenges, encountered in the process of conducting global health research in places where the effects of global, political and economic inequality are particularly evident. It is a training tool to fill the gap between research ethics guidelines, and their implementation 'on the ground'. The case studies, therefore, focus on 'relational' ethics: ethical actions and ideas that emerge through relations with others, rather than in regulations.
