 An ideal study/practice companion! The Dictionary of Pharmacy is the only English-language reference currently available that provides a comprehensive list of terms of special importance to pharmacy students, educators, and practitioners. This reliable, time-saving volume will serve anyone working in or studying the pharmaceutical sciences. The Dictionary of Pharmacy is a valuable, handy resource that you'll refer to again and again. Compiled by a cast of educators from leading pharmacy schools headed by Dennis B. Worthen (author of Pharmacy in World War II, co-author of Pharmaceutical Education in the Queen City: 150 Years of Service 1850-2000, and former Director of Pharmacy Affairs for Procter & Gamble), this well-organized guide defines all of the jargon surrounding this ever-evolving field. In addition to a complete A-Z listing of definitions, you'll find: abbreviations Latin terms weights and measures practice standards the periodic table the American Pharmacists Association's Code of Ethics and Principles of Practice for Pharmaceutical Care the American Association of Colleges of Pharmacy's Pledge of Professionalism and Pharmacist's Oath lists of professional associations and organizations lists of colleges of pharmacy in the United States and schools of pharmacy (and their faculties) in Canada From a- and a priori to zwitterion and zymogen, the Dictionary of Pharmacy covers the bases. With this one-of-a-kind study/practice companion, you—and your students—need never be stymied by pharmaceutical terminology again.

 The U.S. Food and Drug Administration (FDA) has approved dozens of hormone therapy products for men and women,

including estrogen, progesterone, testosterone, and related compounds. These products have been reviewed for safety and efficacy and are indicated for treatment of symptoms resulting from hormonal changes associated with menopause or other endocrine-based disorders. In recent decades, an increasing number of health care providers and patients have turned to custom-formulated, or compounded, drug preparations as an alternative to FDA-approved drug products for hormone-related health concerns. These compounded hormone preparations are often marketed as "bioidentical" or "natural" and are commonly referred to as compounded bioidentical hormone therapy (cBHT). In light of the fast-growing popularity of cBHT preparations, the clinical utility of these compounded preparations is a substantial public health concern for various stakeholders, including medical practitioners, patients, health advocacy organizations, and federal and state public health agencies. This report examines the clinical utility and uses of cBHT drug preparations and reviews the available evidence that would support marketing claims of the safety and effectiveness of cBHT preparations. It also assesses whether the available evidence suggests that these preparations have clinical utility and safety profiles warranting their clinical use and identifies patient populations that might benefit from cBHT preparations in lieu of FDA-approved BHT.

 In response to the coronavirus disease 2019 (COVID-19) pandemic and the societal disruption it has brought, national governments and the international community have invested billions of dollars and immense amounts of human resources to develop a safe and effective vaccine in an unprecedented time frame. Vaccination against this novel coronavirus, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), offers the possibility of significantly reducing severe morbidity and mortality and transmission when deployed alongside other public health strategies and improved therapies. Health equity is intertwined with the impact of COVID-19 and there are certain populations that are at increased risk of severe illness or death from COVID-19. In the United States and worldwide, the pandemic is having a disproportionate impact on people who are already disadvantaged by virtue of their race and ethnicity, age, health status, residence, occupation, socioeconomic condition, or other contributing factors. Framework for Equitable Allocation of COVID-19 Vaccine offers an overarching framework for vaccine allocation to assist policy makers in the domestic and global health communities. Built on widely accepted foundational principles and recognizing the distinctive characteristics of COVID-19, this report's recommendations address the commitments needed to implement equitable allocation policies for COVID-19 vaccine.

The Pharmacy Technician, 7e American Pharmacists Association (APhA)

The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor

countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. Countering the Problem of Falsified and Substandard Drugs accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines. *The Pharmacy Technician's Pocket Drug Reference* American Pharmacists Association

Written and peer reviewed by experts in practice and academia, the 19th edition of the *Handbook of Nonprescription Drugs: An Interactive Approach to Self-Care* is an authoritative resource for students and for health care providers who counsel and care for patients undertaking self-treatment of nonprescription drugs, nutritional supplements, medical foods, non-drug and preventive measures, and complementary therapies. Its goal is to develop the knowledge and problem-solving skills needed to assess a patient's health status and current practice of self-treatment, to determine whether self-care is necessary or appropriate, and, if appropriate, to recommend safe and effective self-care measures. *Pharmacy Law Desk Reference* American Pharmacists Association
