"An essential purchase for all nursing students ... It is easy to read, clearly written and follows a logical path through a wide scope of subjects relating to pharmacology in nursing ... This book will enable the student reader to develop the necessary knowledge and understanding to be a competent, safe and caring nurse." Keith Booles, Senior Nurse Lecturer/Module Leader, Adult Nursing Practice, Faculty of Health, Staffordshire University, UK "This book is excellent in terms of how it explains complex ideas in simple terms ... It's a practical guide to drugs used in nursing, telling you drug types, effects on the body and side effects the client might encounter. A truly invaluable book for students and nurses alike." Carol Molly Casey, Student Nurse, University of Wolverhampton, UK "This second edition ... provides excellent case studies that [make the subject] come alive by engaging with and applying the theory to realistic patient scenarios along with the very practical 'clinical tips'. This is an excellent introductory text both for pre-registration nurses to prepare them for them today's modern nursing roles and also for those post registration nurses embarking on prescribing courses ... The format is easy to read and breaks down barriers encouraging the reader to delve into this exciting subject." Karen Ford, Programme leader for Non-Medical Prescribing, De Montfort University, UK "This book is easy to read with clear explanations throughout and suitable for all branches of nurse education. Each chapter has clear learning objectives, clinical tips to aid thinking and supported with case studies and multiple choice questions ... There are clear links to clinical practice throughout. I would recommend this as a core book to all nursing students undertaking nurse education." Lesley Drayton, Senior Lecturer, Anglia Ruskin University, UK This ideal starter text for student nurses aims to make pharmacology less intimidating and focuses on the knowledge needed at pre-registration level in order to practice as a newly qualified nurse, in a variety of different settings. The book does not assume previous knowledge of pharmacology, or a level of confidence with maths and drugs calculations. Noted for its clear layout and jargon-free language, this updated edition introduces pharmacology and calculations in a friendly, informative way. This new edition has been carefully expanded to include more detail on adverse drug reactions and interactions, antimicrobials, drugs used in chronic conditions and drugs used in mental health and the text has been fully updated to include the latest NICE guidelines. It contains: 90 calculations and 100 multiple choice questions to help perfect your skills and assess learning Clinical tip boxes linking pharmacology to the role of the nurse Patient scenarios from a range of different clinical settings References to key guidelines and clinical tests The book emphasises application of pharmacological principles to all areas of practice including drug action, interaction and side effects.

Pharmacology is a notoriously difficult subject, particularly in nursing school where students must speed through the entire subject in just one semester. Despite the lack of time spent on the subject, the importance of pharmacology cannot be overstated. As we all know, medication errors can kill. What makes pharmacology such a difficult subject? The sheer volume of information and lack of readily apparent connections. Shortly after initial exposure to pharmacology, students enter survival mode; which means they do their best to ascertain what will be on the exam and then focus all of their time and energy on memorizing that information. This is a mediocre short-term strategy and a horrible long-term strategy. Heckman's Nursing Pharmacology Simplified is here to help. Rather than overwhelm you with seemingly random lists of facts and acronyms, we carefully select key information and present it in a way that is logical and easy to digest. We emphasize core themes and focus on helping you make lasting connections. To ensure brevity and clarity, we tackle pharmacology one drug class at a time and limit the information to one page per drug class. The result is an extraordinarily high-impact pharmacology review. Written by a pharmacist to help nurses. It's nursing pharmacology SIMPLIFIED.
