This book provides teaching scripts for medical educators in internal medicine and coaches them in creating their own teaching scripts. Every year, thousands of attending internists are asked to train the next generation of physicians to master a growing body of knowledge. Formal teaching time has become increasingly limited due to rising clinical workload, medical documentation requirements, duty hour restrictions, and other time pressures. In addition, today's physicians-in-training expect teaching sessions that deliver focused, evidence-based content that is integrated into clinical workflow. In keeping with both time pressures and trainee expectations, academic internists must be prepared to effectively and efficiently teach important diagnostic and management concepts. A teaching script is a methodical and structured plan that aids in effective teaching. The teaching scripts in this book anticipate learners' misconceptions, highlight a limited number of teaching points, provide evidence to support the teaching points, use strategies to engage the learners, and provide a cognitive scaffold for teaching the topic that the teacher can refine over time. All divisions of internal medicine (e.g. cardiology, rheumatology, and gastroenterology) are covered and a section on undifferentiated symptom-based presentations (e.g. fatigue, fever, and unintentional weight loss) is included. This book provides well-constructed teaching scripts for commonly

encountered clinical scenarios, is authored by experienced academic internists and allows the reader to either implement them directly or modify them for their own use. Each teaching script is designed to be taught in 10-15 minutes, but can be easily adjusted by the reader for longer or shorter talks. Teaching Scripts in Internal Medicine is an ideal tool for internal medicine attending physicians and trainees, as well as physician's assistants, nurse practitioners, and all others who teach and learn internal medicine.

Sources of clinical treatment information on nonhuman primates are generally scattered across journals, textbooks, conferences, personal conversations, and more. However, when a clinician on the treatment floor is faced with a patient requiring an immediate treatment decision, time spent on making an informed decision becomes a critical factor. An alternative to conducting a literature search in time-sensitive situations, the *Pocket Handbook of Nonhuman Primate Clinical Medicine* supplies guidance and initial direction on diagnosis and treatment, including working doses based on past case experience. It is the frank, to-the-point nature of the writing that makes readers feel as if they had just asked a colleague how to approach a clinical problem and obtained a quick, "what you need to know" answer. The chapter authors draw on personal experience to describe commonly encountered clinical conditions and how to treat these cases—including not only the "dos" but also the "don'ts." This format gives readers easy access to clinical signs, diagnostic criteria, and options for treatment. The *Pocket Handbook of Nonhuman Primate Clinical Medicine* is a convenient, concise, case-based handbook written by and for clinicians in charge of the diagnosis and treatment of nonhuman primate patients. Available in both print and electronic formats, this handbook

saves readers from having to wade through pages of data and case studies to find answers when time is a factor on the clinic floor.
