Montana Skies is the story of two men, Jack Claymore an Englishman, fleeing from a past that he cannot accept and Wade Reynolds a Montana rancher, a man firmly on the slippery slope to self destruction. A chance meeting and the subsequent tragic death of Wade's best friend, throw them together. As both men fight for survival in the Arizona border town of Nogales, an uneasy bond forms between them. Forced by circumstances both men decide to head north to Montana, Wade to try and rebuild his life and return to his family, and for Jack a chance to forget the past and start afresh. Unbeknown to them, events buried deep in the past of Wade's best friend, slowly resurface and threaten their very lives and the lives of their loved ones. Montana Skies is an epic tale of love and revenge. Sweeping across the plains and mountains of contemporary Montana like a cyclone. Montana Skies crammed full of unforgettable characters, is the great novel of the modern American West. *Toyota's French Connection* Springer 'The Rough Guide to Crete' is the complete handbook to the largest of the Greek Islands. Up-to-date listings of the best places to eat and stay are given for all price ranges and all areas.

Lies Sleeping Haynes Publishing

This book revisits the long contested negotiation between the Thatcher administration and Nissan for the latter's first green-field plant in Europe. From the very beginning, the plant took Britain's EC/EU membership and tariff-free access to the single market as a token. A considerable amount of aid including component supplies was provided to attract Japanese investment and to prevent its transfer to the continent. The successful launch of Sunderland highlighted improved Anglo-Japanese relations and put an end to the Japan-EC/EU trade conflict. But the price was paid by Nissan's slump and fall, and by trade unions in both countries failing to keep counterchecks on management. Brexit and the fall of Carlos Ghosn were a double blow to Anglo-Japanese relations which are in a state of drift and need redefinition.

The seventh book of the bestselling Rivers of London series returns to the adventures of Peter Grant, detective and apprentice wizard, as he solves magical crimes in the city of London. The Faceless Man, wanted for multiple counts of murder, fraud, and crimes against humanity, has been unmasked and is on the run. Peter Grant, Detective Constable and apprentice wizard, now plays a key role in an unprecedented joint operation to bring him to justice. But even as the unwieldy might of the Metropolitan Police bears down on its foe, Peter uncovers clues that the Faceless Man, far from being finished, is executing the final stages of a long term plan. A plan that has its roots in London's two thousand bloody years of history, and could literally bring the city to its knees. To save his beloved city

Peter's going to need help from his former best friend and colleague--Lesley May--who brutally betrayed him and everything he thought she believed in. And, far worse, he might even have to come to terms with the malevolent supernatural killer and agent of chaos known as Mr Punch....

Motoring the Future

Jessica Kingsley Publishers
An updated edition of the classic reference on the dynamics of road and off-road vehicles As we enter a new millennium, the vehicle industry faces greater challenges than ever before as it strives to meet the increasing demand for safer, environmentally friendlier, more energy efficient, and lower emissions products. Theory of Ground Vehicles, Third Edition gives aspiring and practicing engineers a fundamental understanding of the critical factors affecting the performance, handling, and ride essential to the development and design of ground vehicles that meet these requirements. As in previous

editions, this book focuses on applying engineering principles to the analysis of vehicle behavior. A large number of practical examples and problems are included throughout to help readers bridge the gap between theory and practice. Covering a wide range of topics concerning the dynamics of road and off-road vehicles, this Third Edition is filled with up-to-date information, including: * The Magic Formula for characterizing pneumatic tire behavior from test data for vehicle handling simulations * Computer-aided methods for performance and design evaluation of off-road vehicles, based on the author's own research * Updated data on road vehicle transmissions and operating fuel economy * Fundamentals of road vehicle stability control * Optimization of the performance of four-wheel-drive off-road vehicles and experimental substantiation, based on the author's own investigations * A new theory on skid-steering of tracked vehicles, developed by the author.

Penguin
Bring a new level of innovation into your landscape drawings. This book is aimed at artists who wish to explore new ways of using a variety of drawing media to create striking, dramatic landscapes. The author, Robert Dutton, works in a loose style and combines media such as liquid graphite, inks, metallic inks, charcoal and water-soluble painting and drawing pastels. He also experiments with collage work. Predominantly focusing on working in black and white, Drawing Dramatic Landscapes explores basic drawing techniques using a limited range of media, then introduces new techniques and products as the reader progresses. This is a highly instructive guide to the techniques Robert himself uses, with numerous exercises and

larger step-by-step projects throughout the book showing how he works. Alongside these will be numerous examples of the author's finished artworks accompanied by informative captions explaining the methods used to create them, thereby providing both instruction and inspiration. Robert works outdoors from life much of the time, finishing his artworks in the studio later. His work is both achievable and aspirational, making this a highly attractive book for artists of all abilities.

A modern, up-to-date introduction to optimization theory and methods This authoritative book serves as an introductory text to optimization at the senior undergraduate and beginning graduate levels. With consistently accessible and elementary treatment of all topics, An Introduction to Optimization, Second Edition helps students build a solid working knowledge of the field, including unconstrained optimization, linear programming, and constrained optimization. Supplemented with more than one hundred tables and illustrations, an extensive bibliography, and numerous worked examples to illustrate both theory and algorithms, this book also provides: * A review of the required mathematical background material * A mathematical discussion at a level accessible to MBA and business students * A treatment of both linear and nonlinear programming * An introduction to recent developments, including neural networks, genetic algorithms, and interior-point methods * A chapter on the use of descent algorithms for the training of feedforward neural networks * Exercise problems after every chapter, many new to this edition * MATLAB(r) exercises and examples * Accompanying

Instructor's Solutions Manual available on request An Introduction to Optimization, Second Edition helps students prepare for the advanced topics and technological developments that lie ahead. It is also a useful book for researchers and professionals in mathematics, electrical engineering, economics, statistics, and business. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department.

Ten years ago, the inaugural European Conference on Computer Vision was held in Antibes, France. Since then, ECCV has been held biennially under the auspices of the European Vision Society at venues around Europe. This year, the privilege of organizing ECCV 2000 falls to Ireland and it is a signal honour for us to host what has become one of the most important events in the calendar of the computer vision community. ECCV is a single-track conference comprising the highest quality, previously unpublished, contributed papers on new and original research in computer vision. This year, 266 papers were submitted and, following a rigorous double-blind review process, with each paper being reviewed by three referees, 116 papers were selected by the Programme Committee for presentation at the conference. The

venue for ECCV 2000 is the University of Dublin, Trinity College. - unded in 1592, it is Ireland's oldest university and has a proud tradition of scholarship in the Arts, Humanities, and Sciences, alike. The Trinity campus, set in the heart of Dublin, is an oasis of tranquility and its beautiful squares, elegant buildings, and tree-lined playing- elds provide the perfect setting for any conference.

In March 1999, Renault bought a controlling interest in Nissan. Only months before Renault's foray into the Japanese market, Toyota, Japan's most profitable car marker, announced its

decision to build its latest European production facility in northern France. Although greeted with less media attention, Toyota's investment decision was equally remarkable. The author analyzes liberalization trends in both the Japanese and the European automotive markets and the reaction of manufacturers to such trends.
