SUMMARY OF SAPIENS: A BRIEF HISTORY OF HUMANKIND.

DISCLAIMER: This book is a general overview of Sapiens: A Brief History of Humankind. It is intended to be read as a companionship to the original book, provide a general overview of the contents and concepts within it, and make studying the book less confusing. This summary is not affiliated with the writer or publisher of Sapiens in any way. This is not the original book, and if you intended to purchase the original, it can be found here: <http://amzn.to/2qxORbB> THE HISTORY OF HUMANKIND: Written by Yuval Noah Harari, Sapiens: A Brief History of Humankind explores the cultural evolution of Homo sapiens throughout the ages. It begins with early man, several species under the Homo genus, and continues chronologically through the ages. Harari's explanations of human biology, psychology, and history is connected to the basis that humankind has not evolved in a very long time, and they are essentially the same hunter gatherers they always have been on a psychological level, only now they're living in an industrial world. THE FOUR MAJOR ERAS: PART ONE: The Cognitive Revolution... where mankind has evolved to have imagination, the basis for creating the fictions and myths that would dominate the creation of societies and bonds between strangers that allow for mass cooperation between human beings. PART TWO: The Agriculture Revolution... how humankind navigated the slow process of domesticating plants and animals, eventually leading to mankind's settlement lifestyle that allowed for the existence of ruling classes. PART THREE: The Unification of Humankind... which covers the creation and acceptance of money, politics, economics, religion, and the many constructs that truly allows for large civilizations. Within this section is a heavy focus on empires and how they have shaped history ever since imperial ambitions began. PART FOUR: The Scientific Revolution... based around the idea that during the last 500 years the explosion of knowledge and technology as a result of humankind acknowledging their ignorance and lack of answers for everything. Leading up to modern day humans, this section focuses heavily not only on scientific advancements, but how politics, religion, and capitalism shape scientific discoveries for better or worse. WHY THIS SUMMARY? Following Sapiens chapter by chapter, our goal is to condense and simplify without losing the overarching themes that connect each chapter together. This allows for succinct explanations in the book's exploration of biology, psychology, and culture in a fraction of the time, and is given enough context in easy-to-read language to avoid confusion without requiring a huge time commitment.

The Most Dazzling Girl in Berlin HarperCollins

From the author of No.1 international bestseller Collapse, a mesmerizing portrait of the human past that offers profound lessons for how we can live today Visionary, prize-winning author Jared Diamond changed the way we think about the rise and fall of human civilizations with his previous international bestsellers Guns, Germs and Steel and Collapse. Now he returns with another epic - and groundbreaking - journey into our rapidly receding past. In *The World Until Yesterday*, Diamond reveals how traditional societies around the world offer an extraordinary window onto how our ancestors lived for the majority of human history - until virtually yesterday, in evolutionary terms - and provide unique, often overlooked insights into human nature. Drawing extensively on his decades working in the jungles of Papua New Guinea, Diamond explores how tribal societies approach essential human problems, from childrearing to conflict resolution to health, and discovers we have much to learn from traditional ways of life. He unearths remarkable findings - from the reason why modern afflictions like diabetes, obesity and Alzheimer's are virtually non-existent in tribal societies to the surprising benefits of multilingualism. Panoramic in scope and thrillingly original, *The World Until Yesterday* provides an enthralling first-hand picture of the human past that also suggests profound lessons for how to live well today. Jared Diamond is the Pulitzer Prize-winning author of the seminal million-copy-bestseller *Guns, Germs, and Steel*, which was named one of TIME's best non-fiction books of all time, and *Collapse*, a #1 international bestseller. A professor of geography at UCLA and noted polymath, Diamond's work has been influential in the fields of anthropology, biology, ornithology, ecology and history, among others.

The World Until Yesterday HarperCollins

This is a summary of Yuval Noah Harari's Sapiens: A Brief History of Mankind The groundbreaking book, written by a well-known historian, reveals how human beings were created and evolved. It also takes a deep look into the history and biology that have come to define us while enhancing what we understand by "humanity." How did our species succeed in the battle for dominance? Why did our foraging ancestors come together to create cities and kingdoms? How did we come to believe in gods, nations and human rights to trust money, books and laws and to be enslaved by bureaucracy, timetables and consumerism? And what will our world be like in the millennia to come? Available in a variety of formats, this summary is aimed for those who want to capture the gist of the book but don't have the current time to devour all 498 pages. You get the main summary along with all of the benefits and lessons the actual book has to offer. This summary is not intended to be used without reference to the original book.

Sapiens Harper Collins

A companion to such acclaimed works as *The Age of Wonder*, *A Clockwork Universe*, and *Darwin's Ghosts*—a groundbreaking examination of the greatest event in history, the Scientific Revolution, and how it came to change the way we understand ourselves and our world. We live in a world transformed by scientific discovery. Yet today, science and its practitioners have come under political attack. In this fascinating history spanning continents and centuries, historian David Wootton offers a lively defense of science, revealing why the Scientific Revolution was truly the greatest event in our history. *The Invention of Science* goes back five hundred years in time to chronicle this crucial transformation, exploring the factors that led to its birth and the people who made it happen. Wootton argues that the Scientific Revolution was actually five separate yet concurrent events that developed independently, but came to intersect and create a new worldview. Here are the brilliant iconoclasts—Galileo, Copernicus, Brahe, Newton, and many more curious minds from across Europe—whose studies of the natural world challenged centuries of religious orthodoxy and ingrained superstition. From gunpowder technology, the discovery of the new world, movable type printing, perspective painting, and the telescope to the practice of conducting experiments, the laws of nature, and the concept of the fact, Wootton shows how these discoveries codified into a social construct and a system of knowledge. Ultimately, he makes clear the link between scientific discovery and the rise of industrialization—and the birth of the modern world we know.

Sapiens Harper Collins

Renaissance military memoirs studied for what they reveal of contemporary attitudes towards war, selfhood and identity.

Summary - Sapiens Farrar, Straus and Giroux

The powerful, unforgettable graphic memoir from Jarrett Krosoczka, about growing up with a drug-addicted mother, a missing father, and two unforgettably opinionated grandparents. A National Book Award Finalist! In kindergarten, Jarrett Krosoczka's teacher asks him to draw his family, with a mommy and a daddy. But Jarrett's family is much more complicated than that. His mom is an addict, in and out of rehab, and in and out of Jarrett's life. His father is a mystery -- Jarrett doesn't know where to find him, or even what his name is. Jarrett lives with his grandparents -- two very loud, very loving, very opinionated people who had thought they were through with raising children until Jarrett came along. Jarrett goes through his childhood trying to make his non-normal life as normal as possible, finding a way to express himself through drawing even as so little is being said to him about what's going on. Only as a teenager can Jarrett begin to piece together the truth of his family, reckoning with his mother and tracking down his father. Hey, Kiddo is a profoundly important memoir about growing up in a family grappling with

addiction, and finding the art that helps you survive.

Summary: Sapiens - a Brief History of Humankind by Yuval Noah Harari Scholastic Inc.

A fascinating historical novel about Hilde, an orphan who experiences Berlin on the cusp of World War II as she discovers her own voice and sexuality, ultimately finding a family when she gets a job at a gay cabaret, by award-winning author Kip Wilson. On her eighteenth birthday, Hilde leaves her orphanage in 1930s Berlin, and heads out into the world to discover her place in it. But finding a job is hard, at least until she stumbles into Café Lila, a vibrant cabaret full of expressive customers. Rosa, one of the club's waitresses and performers, immediately takes Hilde under her wing. As the café denizens slowly embrace Hilde, and she embraces them in turn, she discovers her voice and her own blossoming feelings for Rosa. But Berlin is in turmoil. Between the elections, protests in the streets, worsening antisemitism and anti-homosexual sentiment, and the beginning seeds of unrest in Café Lila itself, Hilde will have to decide what's best for her future . . . and what it means to love a place on the cusp of war.

A Brief History of Humankind BookSummaryGr

"A book that should be read . . . Smith brings an alchemic talent to describing physical labor." —The New York Times Book Review
 "Beautiful, funny, and harrowing." – Sarah Smarsh, The Atlantic
 "Remarkable . . . this is the book that Hillbilly Elegy should have been." —Kirkus Reviews
 A vivid window into the world of working class men set during the Bakken fracking boom in North Dakota Like thousands of restless men left unmoored in the wake of the 2008 economic crash, Michael Patrick Smith arrived in the fracking boomtown of Williston, North Dakota five years later homeless, unemployed, and desperate for a job. Renting a mattress on a dirty flophouse floor, he slept boot to beard with migrant men who came from all across America and as far away as Jamaica, Africa and the Philippines. They ate together, drank together, argued like crows and searched for jobs they couldn't get back home. Smith's goal was to find the hardest work he could do—to find out if he could do it. He hired on in the oil patch where he toiled fourteen hour shifts from summer's 100 degree dog days to deep into winter's bracing whiteouts, all the while wrestling with the demons of a turbulent past, his broken relationships with women, and the haunted memories of a family riven by violence. The Good Hand is a saga of fear, danger, exhaustion, suffering, loneliness, and grit that explores the struggles of America's marginalized boomtown workers—the rough-hewn, castoff, seemingly disposable men who do an indispensable job that few would exalt: oil field hands who, in the age of climate change, put the gas in our tanks and the food in our homes. Smith, who had pursued theater and played guitar in New York, observes this world with a critical eye; yet he comes to love his coworkers, forming close bonds with Huck, a goofy giant of a young man whose lead foot and quick fists get him into trouble with the law, and The Wildebeest, a foul-mouthed, dip-spitting truck driver who torments him but also trains him up, and helps Smith "make a hand." The Good Hand is ultimately a book about transformation—a classic American story of one man's attempt to burn himself clean through hard work, to reconcile himself to himself, to find community, and to become whole.

A Brief History of Humankind Summareads Media LLC

Summary of Sapiens: A Brief History of Humankind by Yuval Noah Harari - Book Summary - OneHour Reads From where did the world appear? Is the creation story true? Why is Man the way he is? Were there men, before you and I? Would there be other species after you and me? Religion & Politics: what is their origin? And why do they rule our world so strongly? Oh well! You might be in for a shocker! If you were told today that you come from a lineage of animals, and probably have some apes and chimpanzees as long-lost cousins, what would you think? If you knew that the creation story was just make-believe invented to control your world, what would you say? What if you were told that your species would one day come to an end? All of these and many more are the topics explored in "SAPIENS." In the book "Sapiens", Yuval Noah Harari discusses all you need to know about who you are and where you come from, and debunks the many myths that have lived with us until now. This book contains a comprehensive, well detailed summary and key takeaways of the original book by Yuval Noah Harari. It summarizes the book in detail, to help people effectively understand, articulate and imbibe the original work by Noah. This book is not meant to replace the original book but to serve as a companion to it. Contained is an Executive Summary of the original book Key Points of each chapter and Brief chapter-by-chapter summaries To get this book, Scroll Up Now and Click on the "Buy Now" Button to Download your Copy Right Away! Disclaimer: This is a summary, review of the book "Sapiens" and not the original book.

Summary | Sapiens Open Road Media

"Fascinating.... Lays a foundation for understanding human history."—Bill Gates In this "artful, informative, and delightful" (William H. McNeill, New York Review of Books) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea

and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, Guns, Germs, and Steel chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth club of California's Gold Medal.

Summary of Sapiens - A Brief History of Humankind - A Comprehensive Summary Seventy thousand years ago, there were at least six different human species on earth. They were insignificant animals whose ecological impact was less than that of fireflies or jellyfish. Today, there is only one human species left: Us. Homo sapiens. But we rule this planet. Sapiens, the book, takes us on a breath-taking ride through our entire human history, from its evolutionary roots to the age of capitalism and genetic engineering, to uncover why we are the way we are. Sapiens focuses on key processes that shaped humankind and the world around it, such as the advent of agriculture, the creation of money, the spread of religion and the rise of the nation state. Unlike other books of its kind, Sapiens takes a multi-disciplinary approach that bridges the gaps between history, biology, philosophy and economics in a way never done before. Furthermore, taking both the macro and micro view, Sapiens conveys not only what happened and why, but also how it felt for individuals. Sapiens: A Brief History of Humankind is a book by Professor Yuval Noah Harari first published in Hebrew in Israel in 2011, and in English in 2014. Harari cites Jared Diamond's Guns, Germs, and Steel (1997) as one of the greatest inspirations for the book by showing that it was possible to "ask very big questions and answer them scientifically". Here is a Preview of What You Will Get: - A Full Book Summary - An Analysis - Fun quizzes - Quiz Answers - Etc Get a copy of this summary and learn about the book.

The Stories in Our Genes Harper Collins

The ebook is designed to be read on devices with large color displays The Kindle edition is incompatible with iOS. See below for a list of supported devices. This second volume of Sapiens: A Graphic History, the full-color graphic adaptation of Yuval Noah Harari's #1 New York Times bestseller, focuses on the Agricultural Revolution—when humans fell into a trap we've yet to escape: working harder and harder with diminishing returns. What if humanity's major woes—war, plague, famine and inequality—originated 12,000 years ago, when Homo sapiens converted from nomads to settlers, in pursuit of the fantasy of productivity and efficiency? What if by seeking to control plants and animals, humans ended up being controlled by kings, priests, and Kafkaesque bureaucrats? Volume 2 of Sapiens: A Graphic History—The Pillars of Civilization explores a crucial chapter in human development: the Agricultural Revolution. This is the story of how wheat took over the world; how an unlikely marriage between a god and a bureaucrat created the first empires; and how war, plague, famine, and inequality became an intractable feature of the human condition. But it's not all doom and gloom with this book's cast of entertaining characters and colorful humorous scenes. Yuval, Zoe, Prof. Saraswati, Cindy and Bill (now farmers), Detective Lopez, and Dr. Fiction, all introduced in Volume 1, once again travel the length and breadth of human history, this time investigating the impact the Agricultural Revolution has had on our species. The cunning Mephisto shows them how to ensnare humans, King Hammurabi lays down the law, and Confucius explains harmonious society. The origins of modern farming are introduced through Elizabethan tragedy; the changing fortunes of domesticated plants and animals are tracked in the columns of the Daily Business News; the story of urbanization is portrayed as a travel brochure, offering discount journeys to ancient Babylon and China; and the history of inequality unfolds in a superhero detective story; with guest appearances by historical and cultural personalities throughout such as Thomas Jefferson, Scarlett O'Hara, Margaret Thatcher, and John Lennon. Sapiens: A Graphic History, Volume 2 is a radical, witty and colorful retelling of the story of humankind for adults and young adults, and can be read on its own or in sequence with Volume 1.

A Brief History of Everyone Who Ever Lived Random House The author of the international bestseller Sapiens: A Brief History of Humankind looks at covert operations and assassination plots in the medieval period, matching anything to be found in our own era.

A Memoir of Work, Brotherhood, and Transformation in an American Boomtown SapiensA Brief History of Humankind Dan Ariely's three New York Times bestselling books on his groundbreaking behavioral economics research, Predictably Irrational, The Upside of Irrationality, and The (Honest) Truth About Dishonesty, are now available for the first time in a single volume.

Summary Createspace Independent Publishing Platform INSTANT NEW YORK TIMES BESTSELLER A dramatically new understanding of human history, challenging our most

fundamental assumptions about social evolution—from the development of agriculture and cities to the origins of the state, democracy, and inequality—and revealing new possibilities for human emancipation. For generations, our remote ancestors have been cast as primitive and childlike—either free and equal innocents, or thuggish and warlike. Civilization, we are told, could be achieved only by sacrificing those original freedoms or, alternatively, by taming our baser instincts. David Graeber and David Wengrow show how such theories first emerged in the eighteenth century as a conservative reaction to powerful critiques of European society posed by Indigenous observers and intellectuals. Revisiting this encounter has startling implications for how we make sense of human history today, including the origins of farming, property, cities, democracy, slavery, and civilization itself. Drawing on pathbreaking research in archaeology and anthropology, the authors show how history becomes a far more interesting place once we learn to throw off our conceptual shackles and perceive what's really there. If humans did not spend 95 percent of their evolutionary past in tiny bands of hunter-gatherers, what were they doing all that time? If agriculture, and cities, did not mean a plunge into hierarchy and domination, then what kinds of social and economic organization did they lead to? The answers are often unexpected, and suggest that the course of human history may be less set in stone, and more full of playful, hopeful possibilities, than we tend to assume. The Dawn of Everything fundamentally transforms our understanding of the human past and offers a path toward imagining new forms of freedom, new ways of organizing society. This is a monumental book of formidable intellectual range, animated by curiosity, moral vision, and a faith in the power of direct action. Includes Black-and-White Illustrations *Sapiens: A Graphic History, Volume 2* Penguin UK University Press returns with another short and captivating book - a brief history of our human species: Homo sapiens. All the humans who ever lived are extinct - except for Homo sapiens. We are, in Latin, the "wise humans." We are the sole survivors of a long and deadly battle against the forces of nature and time. The first humans - hominids - diverged from the other primates and began to walk upright on two legs some 3 million years ago. The first "modern" humans - Homo sapiens - diverged from the other hominids some 250,000 years ago. Since then, modern humans and our big brains migrated out of Africa, developed the capacity for language, domesticated animals, became farmers, learned to write, got religious, built cities, invented money, expanded empires, harnessed the scientific method, tried enlightenment, challenged authority, created machines, conquered the air, weaponized the atom, eliminated disease, walked on the moon, did the internet, made artificial intelligence, fed seven billion people, and speculated about the future of our species. This short book provides a captivating account of the noble, savage, sacred, mundane, heroic and heart-warming events that connect us with our earliest ancestors - an account that you can read in about an hour.

A Brief History Independently Published

Yuval Noah Harari, author of the critically-acclaimed New York Times bestseller and international phenomenon Sapiens, returns with an equally original, compelling, and provocative book, turning his focus toward humanity's future, and our quest to upgrade humans into gods. Over the past century humankind has managed to do the impossible and rein in famine, plague, and war. This may seem hard to accept, but, as Harari explains in his trademark style—thorough, yet riveting—famine, plague and war have been transformed from incomprehensible and uncontrollable forces of nature into manageable challenges. For the first time ever, more people die from eating too much than from eating too little; more people die from old age than from infectious diseases; and more people commit suicide than are killed by soldiers, terrorists and criminals put together. The average American is a thousand times more likely to die from bingeing at McDonalds than from being blown up by Al Qaeda. What then will replace famine, plague, and war at the top of the human agenda? As the self-made gods of planet earth, what destinies will we set ourselves, and which quests will we undertake? Homo Deus explores the projects, dreams and nightmares that will shape the twenty-first century—from overcoming death to creating artificial life. It asks the fundamental questions: Where do we go from here? And how will we protect this fragile world from our own destructive powers? This is the next stage of evolution. This is Homo Deus. With the same insight and clarity that made Sapiens an international hit and a New York Times bestseller, Harari maps out our future.

By Yuval Noah Harari -- a Brief History of Humankind Penguin New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be "human." One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue

either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, Sapiens integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon

Moalem.

The Crisis of Liberalism and the Theatre of Terror HarperCollins Sapiens: A Brief History of Humankind by Yuval Noah Harari (Book Summary) Important note: This is not the original book. This is a book summary of Sapiens: A Brief History of Humankind by Yuval Noah Harari About: Our species, Homo sapiens, started as just another, biologically insignificant, animal among countless others, but at some point made a very quick "jump" to domination over other species that has left man anxious, destructive, and often miserable despite all our efforts to be happy. Yuval Noah Harari's book, 'Sapiens, ' traces the origins, mechanisms, and effects of what we think of as "human progress" from small bands of hunter-gatherers 100,000 years ago to the present-day global network through which our species has come to dominate the entire Earth. This bird's-eye view of human history delves into the development of sapiens' social organization and the structural features of human cultures through which our species has spread, replicated, and evolved, including the breakthroughs of human

language with its infinite expressions, the use of the human imagination, and the rise of the concept of a better future that lies just beyond the horizon. Through these mechanisms, our species has evolved socially, rather than biologically, into a species that's increasingly in control of our own destiny. This book considers not only how this evolution has occurred but questions of whether this "progress" has truly been beneficial and how we might, with our awareness of how we got here, decide where we want to go. Here's what you'll learn about in this summary: Although sapiens have not evolved biologically in 100,000 years, we have experienced radical evolutions in the social order driven by our ability to collectively imagine. History, overall, is moving in the direction of global unity of humankind. None of the outcomes of history have been inevitable, and the flexible nature of the social order may mean that our species can control its destiny.
