For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

Handbook of Research on Policies and Practices for Assessing Inclusive Teaching and Learning Springer Science & Business Media

This book contains selected papers presented at the 13th IFIP WG 9.2, 9.6/11.7, 11.6/SIG 9.2.2 International Summer School on Privacy and Identity Management, held in Vienna, Austria, in August 2018. The 10 full papers included in this volume were carefully reviewed and selected from 27 submissions. Also included are reviewed papers summarizing the results of workshops and

tutorials that were held at the Summer School as well as papers contributed by several of the invited speakers. The papers combine interdisciplinary approaches to bring together a host of perspectives: technical, legal, regulatory, socio-economic, social, societal, political, ethical, anthropological, philosophical, historical, and psychological.

Bringing together international authors, this edited collection addresses the need for greater inclusivity within organizational policy and practice, in order to tackle both visible and invisible inequalities amongst employees. Evidence suggests that more positive employment relationships can be brought about by tackling diversity issues, yet there are still 'grey areas' existing in the

current legislative framework. Volume I explores the way that these hidden inequalities can be used to identify an individual as 'other,' and how this ultimately affects their wellbeing and welfare at work. Analysing social justice and stigma, as well as nuanced issues within the workplace, this book is a thought-provoking read for scholars of HRM, practitioners and policy-makers.

An authoritative handbook on risk management techniques and simulations as applied to financial engineering topics, theories, and statistical methodologies The Handbook of Financial Risk Management: Simulations and Case Studies illustrates the practical implementation of simulation techniques in the banking and financial industries through the use of real-world applications. Striking a balance between theory and practice, the Handbook of Financial Risk Management: Simulations and Case Studies demonstrates how simulation algorithms can be used to solve practical problems and showcases how accuracy and efficiency in implementing various simulation methods are indispensable tools in risk management. The book provides the reader with an intuitive understanding of financial risk management and deepens insight into those financial products that cannot be priced traditionally. The Handbook of Financial Risk Management also

features: Examples in each chapter derived from consulting projects, current research, and course instruction Topics such as volatility, fixed-income derivatives, LIBOR Market Models, and risk measures Over twenty-four recognized simulation models Commentary, data sets, and computer subroutines available on a chapter-by-chapter basis As a complete reference for practitioners, the book is useful in the fields of finance, business, applied statistics, econometrics, and engineering. The Handbook of Financial Risk Management is also an excellent text or supplement for graduate and MBA-level students in courses on financial risk management and simulation.

Design in the Borderlands E-Government Success around the World: Cases, Empirical Studies, and Practical Recommendations Cases, Empirical Studies, and Practical Recommendations "Adaptation of applied Information and Communication Technologies (ICT) research results is one of the greatest challenges faced today in building the global Knowledge Economy. While research challenges can be quite similar across the world thus facilitating cross-border cooperation between researchers, government and industry, how actual research results can be exploited or implemented can vary considerably depending on the social, cultural and infrastructural context of the target country, province or region. This offers opportunities as well as challenges in terms of how applied ICT can be used to both support economic development and inform future research challenges. When cross-border collaboration is effective, there can be a valuable exchange of knowledge that can not only lead to successful adaptation of research results or lessons learnt from successful implementations in other countries, but can also provide insight into different problem solving techniques and new ways of thinking that can enrich the ICT research agenda. It is only through such mutually beneficial shared insight that the Digital Divide can be bridged. This set of two books brings together a comprehensive collection of over 220 contributions on commercial, government or societal exploitation of applied ICT, representing cutting edge research, good practice and practical eAdoption from Africa, the Americas, Asia & Europe."

This book contains selected papers from the symposium "Operations Research 2010" which was held from September 1-3, 2010 at the "Universität der Bundeswehr München", Germany. The international conference, which also serves as the annual meeting of the German Operations Research Society (GOR), attracted more than 600 participants from more than thirty countries. The general theme "Mastering Complexity" focusses on a natural component of the globalization process. Financial markets, traffic systems, network topologies and, last but not least, energy resource management, all contain complex behaviour and economic interdependencies which necessitate a scientific solution. Operations Research is one of the key instruments to model, simulate and analyze such systems. In the process of developing optimal solutions, suitable heuristics and efficient procedures are some of the challenges which are discussed in this volume.

Exploitation of Information and Communications Technologies (ICT) is critical to building the Knowledge Economy. This work brings together a comprehensive collection of contributions on commercial, government or societal exploitation of the Internet and ICT, representing research and practical eAdoption from Africa, the Americas, Asia, and Europe.

Innovation and the Knowledge Economy Routledge

This book gathers together innovative research and practical findings relating to urban mobility transformation. It is especially intended to provide academicians, researchers, practitioners and decision makers with effective strategies and techniques that can support urban mobility in a sustainable way. The chapters, which report on contributions presented at the 5th Conference on Sustainable Urban Mobility, held virtually on June 17-19, 2020, from Greece, cover the thematic areas of: social networks and traveler behavior; applications of technologies in transportation and big data analytics; transport infrastructure and traffic management; and transportation modeling and impact assessment. Special attention is given to public transport and demand responsive systems, electromobility, micromobility and automated vehicles. The book addresses the challenges of the near future, highlighting the importance of knowledge transfer, and it is intended to foster communication among universities, industries and public administration.

Web services and Service-Oriented Computing (SOC) have become thriving areas of academic research, joint university/industry research projects, and novel IT products on the market. SOC is the computing paradigm that uses Web services as building blocks for the engineering of

composite, distributed applications out of the reusable application logic encapsulated by Web services. Web services could be considered the best-known and most standardized technology in use today for distributed computing over the Internet. This book is the second installment of a two-book collection covering the state-of-the-art of both theoretical and practical aspects of Web services and SOC research and deployments. Advanced Web Services specifically focuses on advanced topics of Web services and SOC and covers topics including Web services transactions, security and trust, Web service management, real-world case studies, and novel perspectives and future directions. The editors present foundational topics in the first book of the collection, *Web Services Foundations* (Springer, 2013). Together, both books comprise approximately 1400 pages and are the result of an enormous community effort that involved more than 100 authors, comprising the world's leading experts in this field.

Recent economic, political, and technological forces are changing the landscape of electronic business and electronic commerce. Although great strides have been made over the past in understanding, researching and advancing e-business, rarely have we witnessed its use so profound and yet its limitations so pronounced, than what has been on global public display for the past 18 months. As a result, new e-commerce strategies and techniques are emerging, collaborative value creation is essential and e-business models are being refined and developed, with special attention towards IS in financial markets, health care and related institutions. It is for these reasons (and many more) that we are so particularly excited and grateful for the collection of papers included in this Value Creation in e-Business Management LNBIP volume number 36. The papers selected in this volume address these emerging e-business issues and are organized into four research lines: Business Models for the Digital Economy, Electronic and Mobile Commerce Behavioral and Global Issues, IS in Financial Markets and Institutions, Web 2.0 and E-Commerce and Collaborative Value Creation. The first group, Business Models for the Digital Economy, provides a closer examination of business models from a rich mixture of segments in the IT industry. They include Hoyer and Stanoevska-Slabeva's business model types for enterprise mashup intermediaries, Riehle's 'commercial' open source business model, Chen's interesting comparison between iPhone versus Kindles in electronic book sales, and Lyons and coauthors business models in emerging online services.

Logistics and Supply Chain Management has been a vital part of every economy and every business entity. Both sciences have become prestigious research fields focusing on best practices, concepts, and methods. Outsourcing Management for Supply Chain Operations and Logistics Services is concentrated on the key players of the outsourcing paradigm; the organizations that provide logistics services, the Third Party Logistics (3PLs), as well as their clients, presenting and promoting the lessons learned by their cooperation. Specifically, this publication presents studies which are relevant to practitioners, researchers, students, and clients of the application of the Outsourcing practice on the Logistics and Supply Chain Management services giving emphasis to 3PLs.

The aim of this book is to investigate the discursive power of two original, theoretical lenses when applied to real outsourcing arrangements and phenomena. The Transaction Cost Economics (TCE) and Foucauldian perspectives are brought to bear on five outsourcing relationships in order to test the application of these discourses to rich qualitative data over the outsourcing contractual life-cycle. This will be the first study illustrating the relevance of Foucauldian concepts of governmentality, discourse and power relations to the study of outsourcing arrangements, and will also incorporate the perspectives of both client and supplier organizations. Using discourse analysis, the objective is to critically deconstruct and provide fresh insight into the normative 'outsourcing' discourse that has grown up around global sourcing practices over the last 30 years.

This book makes a significant contribution to advancing post-geographic understandings of physical and virtual boundaries. It brings together the emergent theory of 'border thinking' with innovative thinking on design, and explores the recent discourse on decoloniality and globalism. From a variety of viewpoints, the topics engaged show how design was historically embedded in the structures of colonial imposition, and how it is implicated in more contemporary settings in the extension of 'epistemological colonialism'. The essays draw on perspectives from diverse geo-cultural and theoretical positions including architecture, design theory and history, sociology, critical theory and cultural studies. The authors are leading and emergent figures in their fields of study and practice, and the geographic scope of the chapters ranges across Europe, the Middle East, Africa, South America, Asia, and the Pacific. In recognition of the complexity of challenges that are now determining the future security of humanity, *Design in the Borderlands* aims to contribute to 'thinking futures' by adding to the increasingly significant debate between design, in the context of the history of Western modernity, and decolonial thought.

Around the world, there is mounting evidence that parks and protected areas contribute to a healthy civil society, thus increasing the economic importance of cultural and nature-based tourism. Operating at the intersection of business and the environment, tourism can improve human health and wellbeing as well as serve as a catalyst for increasing appreciation and stewardship of the natural world. While the revenues from nature-based activities help to make the case for investing in park and protected area management; the impacts they have need to be carefully managed, so that visitors do not destroy the natural wonders that attracted them to a destination in the first place. This book features contributions from tourism and recreation researchers and practitioners exploring the relationship between tourism, hospitality, protected areas, livelihoods and both physical and emotional human wellbeing. The book includes sections focused on theory, policy and practice, and case studies, to inform and guide industry decisions to address real-world problems and proactively plan for a sustainable and healthy future.

Inclusivity is a crucial factor in assessment design as fair assessment must reflect the needs of a diverse student body. Assessment practices should also be culturally inclusive and supportive to all students while considering the needs of learners with disabilities and specific learning difficulties. Educational institutions worldwide are adopting a range of principles, using a variety of assessment methods, and developing assessment literacy. All these issues must be considered when researching inclusive assessment practices and policies. *The Handbook of Research on Policies and Practices for Assessing Inclusive Teaching and Learning* discusses the needs of learners of any context, background, and culture. This book strives to promote the importance of global inclusive assessment and teaching, giving an understanding to educators and faculty of the negative effect uniform assessment and teaching strategies have on a diverse body of students. Covering topics such as equitable design, ethnic preferential policies, and multilingual

perspectives, this book provides an indispensable resource for researchers, practitioners,

educators, teacher educators, policymakers, administrators, program planners, educational

managers, educational leaders, professors, and academicians.
