Selling Shakespeare tells a story of Shakespeare's life and career in print, a story centered on the people who created, bought, and sold books in the early modern period. The interests and investments of publishers and booksellers have defined our ideas of what is 'Shakespearean', and attending to their interests demonstrates how one version of Shakespearean authorship surpassed the rest. In this book, Adam G. Hooks identifies and examines four pivotal episodes in Shakespeare's life in print: the debut of his narrative poems, the appearance of a series of best-selling plays, the publication

of collected editions of his works, and the cataloguing of those works. Hooks also offers a new kind of biographical investigation and historicist criticism, one based not on external life documents, nor on the texts of Shakespeare's works, but on the books that were printed, published, sold, circulated, collected, and catalogued under his name.

In a world suffering from an ageing population and declining birth rate, service robotics and mechatronics have an

increasingly vital role to play in maintaining a safe and sustainable environment for everyone. Mechatronics can be used in the reconstruction or restoration of various environments which we rely upon to survive; for example the reconstruction of a city after an earthquake, or the restoration of polluted waters This collection of papers was originally presented at the 7th International Conference on Machine Automation, 2008, in Awaji, Japan, and covers a variety of new trends in service robotics and mechatronics. Service Robotics and Mechatronics showcases the latest research in the area to provide researchers and scientists with an up-to-date source of knowledge and basis for further study, as well as offering graduate students valuable reference material.

Chemical sensors are in high demand for applications as varied as water pollution detection, medical diagnostics, and battlefield air analysis. Designing the next generation of sensors requires an interdisciplinary approach. The book

provides a critical analysis of new opportunities in sensor materials research that have been opened up with the use of combinatorial and high-throughput technologies, with emphasis on experimental techniques. For a view of component selection with a more computational perspective, readers may refer to the complementary volume of *Integrated Analytical Systems* edited by M. Specificity of Proteolysis presents a survey and conclusions on the action or proteinases - enzymes which are cleaving proteins or peptides. The specificity of proteinases which is determined as the sequence of amino acids at the cleavage site of a substrate, is an important criteria to choose an enzyme as tool in protein research. Whenever one is looking for an enzyme to act at a defined site or to give defined cleavage products one will find comprehensive information in this work. Comprehensive information about more than 280 endopeptidases which are based on the database LYSIS including a calculation program to determine cleavage sites, is given in the book.
