Colloid and Surface Chemistry is a subject of immense importance and implications both to our everyday life and numerous industrial sectors, ranging from coatings and materials to medicine and biotechnology. How do detergents really clean? (Why can't we just use water?) Why is milk "milky"? Why do we use eggs so often for making sauces? Can we deliver drugs in better and controlled ways? Coating industries wish to manufacture improved coatings e.g. for providing corrosion resistance, which are also environmentally friendly i.e. less based on organic solvents and if possible exclusively on water. Food companies want to develop healthy, tasty but also long-lasting food products which appeal to the environmental authorities and the consumer. Detergent

and enzyme companies are working to develop improved formulations which clean more persistent stains, at lower temperatures and amounts, to the benefit of both the environment and our pocket. Cosmetics is also big business! Creams, lotions and other personal care products are really just complex emulsions. All of the above can be explained by the principles and methods of colloid and surface chemistry. A course on this topic is truly valuable to chemists, chemical engineers, biologists, material and food scientists and many more.

Multiple Choice Questions on Basic Medical Sciences could help students to learn and get acquainted with the questions that are generally asked in multiple choice questions (MCQ) examinations in basic medical sciences subjects – anatomy, physiology, biochemistry and pharmacology. The medical curriculum has moved away from the traditional system to integrated-holistic system over the years. Many medical schools have adopted integration in preclinical and clinical years and students will be evaluated across their subjects as clinical and basic sciences knowledge amalgamates the holistic human body. Integration will allow the student to understand the intricate body systems comprehensively and homeostasis and pathological derangements in the human body. MCQ-form of examinations is the complex type of evaluations where students find them as most tedious forms of evaluation. Unless a student has in-depth knowledge in the content of the subject, seldom they answer the MCQ correctly. Students need to get good exposure and practice while preparing for MCQ examinations. There are very few reference books

available on MCQ, students being in the transition period in preclinical years from fresh high school graduation, basic sciences years of medical education need extra efforts to learn and understand. A form of guide or reference to learn the MCQ evaluation is a dire need for the students. This short book on MCQ will definitely help medical, nursing and allied health sciences students as basic sciences are the foundation for future clinical years. Student's curiosity to learn medical subjects through multiple choice questions shall enhance their deep learning and reasoning as clinical conditions needs a reference on normal body structure and functions. This book may provide a foundation in the initial years and a guide to build their basic sciences knowledge to higher level. *Fundamentals and Applications* Pascal Press
