Bowditch's Useful Tables London, Ont. : Faculty of Education, University of Western Ontario This volume provides a

framework for approaching and understanding mental normativity. It presents cutting-edge research on the ethics of belief as well as innovative research beyond the normativity of belief—and towards an ethics of mind. By moving beyond traditional issues of epistemology the contributors discuss the most current ideas revolving around rationality, responsibility,

and normativity. The book's chapters are divided into two main parts. Part I discusses contemporary issues surrounding the normativity of belief. The essays here cover topics such as control over belief and its implication for the ethics of belief, the role of the epistemic community for the possibility of epistemic normativity, responsibility for believing, doxastic partiality in

friendship, the structure and content of epistemic norms, and the norms for suspension of judgment. In Part II the focus shifts from the practical dimensions of belief to the normativity and rationality of other mental states—especially blame, passing thoughts, fantasies, decisions, and emotions. These essays illustrate how we might approach an ethics of mind by focusing not only on

belief, but also more generally on debates about responsibility and rationality, as well as on normative questions concerning other mental states or attitudes. The *Ethics of Belief and Beyond* paves the way towards an ethics of mind by building on and contributing to recent philosophical discussions in the ethics of belief and the normativity of other mental phenomena. It will be of interest to

upper-level students and researchers working in epistemology, ethics, philosophy of action, philosophy of mind, and moral psychology.

Edwards and his theological successors. While Baptists in the antebellum South boasted a different theological pedigree than Presbyterians or Congregationalists, and while they inhabited a Southern landscape unfamiliar to the bustling cities and tall forests of New England, they believed their similarities with Edwards far outweighed their differences. Like Edwards, these Baptists

were revivalistic, Calvinistic, loosely confessional, and committed to practical divinity. In these four things, Southern Edwardseans lived, moved, and had its being. In the nineteenth-century, when so many Presbyterians scoffed at Edwards's "innovation" and Methodists scorned his Calvinism, Baptists found in Edwards a man after their own

heart. By 1845, at the first Southern Baptist Convention, Southern Edwardseans had laid the groundwork for a convention marked by the theology of Jonathan Edwards. Being a Study in the History

of the Book Trade in the Reign of Elizabeth I., 1558 to 1603.

John Napier published his treatise on the discovery of logarithms in 1614. It was written in Latin, the scholarly language of his day, under the title *Mirifici Logarithmorum Canonis Descriptio*. The importance of the work was quickly perceived and an English language translation by Edward Wright

followed two years later, with the title *A Description of the Admirable Table of Logarithmes*. A further English edition followed in 1618. It is said that this book freed the world from a logjam of calculations. John Napier spent more than twenty years working alone on his system of logarithms, during a time when the multiplication and division of large numbers, as well as the finding of square roots,

<p>was considered to be extremely difficult. Because of his discovery of logarithms, these tedious mathematical operations could be replaced by the much easier processes of simple addition, subtraction and division by two. Never again would astronomers, architects, merchants and navigators become bogged down with calculations that were simply too</p>	<p>difficult or time consuming to carry out. Seeking a name for his discovery, Napier turned to Greek, coining the word Logarithm from logos (Greek for ratio or reckoning) and arithmos (Greek for number). Johannes Kepler, the imperial mathematician and astronomer at Prague, was one of the first to realize the enormous importance of Napierian logarithms.</p>	<p>Initially indifferent, his attitude was quickly changed to one of great enthusiasm when he saw that tables of logarithms could considerably ease the burden of difficult astronomical calculations. The French mathematician and astronomer Pierre Simon Laplace said that logarithms, '...by shortening the labours, doubled the life of the astronomer.' At a congress</p>
--	---	---

held in Edinburgh to celebrate the 300th anniversary of the publication of this book, it was remarked that '...no previous work had led up to it; nothing had foreshadowed it or heralded its arrival. It stands isolated, breaking upon human thought abruptly, without borrowing from the works of other intellects or following known lines of mathematical thought.' Thus has posterity

judged the worth of John Napier, Baron of Merchiston, and his logarithms. *Useful Tables* CUP Archive Certain telecommunications networks are a critical element of the UK's infrastructure, "the loss or compromise of which would have a major, detrimental impact on the availability or integrity of essential services, leading to severe economic or social consequences

..." In the UK the Critical National Infrastructure (CNI) is now largely in the hands of private enterprises. There is potentially a conflict between the commercial imperative and national security. In 2003 BT, which is responsible for large parts of the UK's telecommunications structure, embarked on a major £10bn rationalisation and upgrade project (the 21st Century Network). A

<p>number of companies were selected to supply the various equipment required, one of which was Huawei, a Chinese telecommunications company. A contract for supply of transmission and access equipment, including routers, was signed in 2005, with this being deployed across the network from January 2007. Most of the concerns surrounding Huawei relate to its</p>	<p>perceived links to the Chinese State. Huawei denies direct links with the Chinese Government or military, though the Committee notes that such links are considered normal in China. Huawei has also invested in the Cyber Security Evaluation Centre (the Cell), and the Committee is concerned that a Huawei-run Cell is responsible for providing assurance about Huawei products. The</p>	<p>National Security Adviser should review the effectiveness of the Cell as a matter of urgency and GCHQ must have greater oversight. The risk to the CNI must be managed properly: alerts for foreign investment in CNI; risk assessment; ministers must be informed. <i>Funkers and Sparkers Allyn & Bacon</i> This text introduces the spirit and theory of hacking as well as the</p>
