The versatility of modern commercial house paints has ensured their use in a broad range of applications, including the protection and decoration of historic

buildings, the coating of toys and furniture, and the creation of works of art. Historically, house paints were based on naturally occurring oils, gums, resins, and proteins, but in the early twentieth century, the introduction of synthetic resins revolutionized the industry. Good quality ready-mixed products became available and were used by artists worldwide. While the ubiquity of

commercial paints means that conservators are increasingly called upon to preserve them, such paints pose unique challenges including establishing exactly which materials are present. This book traces the history of the household paint industry in the United States and United Kingdom over the first half of the twentieth century. It includes chapters on the artistic use of

commercial paints and the development of ready-mixed paints and synthetic resins; oil paints, oleoresinous gloss and enamel paints, water paints, nitrocellulose lacquers, oil-modified alkyds, and emulsion paints; and the conservation implications of these materials. The book will be of interest to conservators and conservation scientists working on a broad range of painted

surfaces, as well as curators, art historians, and historians of architectural paint.

Over the past seventy years, a staggering array of new pigments and binders has been developed and used in the production of paint, and twentieth-century artists readily applied these

the center of attention or in the middle of the action. First appearing in the mid 1700's, this comparative newcomer to the canine world was originally bred for the tough life of a drover in Southwest England. Here, they were responsible for driving sheep and cattle to market. It was at this time that they picked up the nickname Bob-Tails because of their docked tails which identified them as

working dogs and allowed their owners to avoid paying pet tax. Tasked with guarding and moving sheep and cattle across windswept moors and dales, they are doubly blessed with brain and brawn. Their loyalty and companionship are beyond reproach, but it is the breed's sense of fun that is as strongly imprinted in their DNA as their instinct to herd. The Old English Sheepdog is often called

the clown prince of dogs, which is a great indication of the indelible imprint he leaves on owners and breeders alike. A large breed, adult Old English Sheepdogs reach around 21-22" at the shoulder and weigh as much as 80 pounds. Hugely affectionate and attention seeking, they will never be far from their owner's side. So, if personal space is high on your list of priorities, this may not be

the ideal breed for you. As long as an OES is part of the family, it doesn't matter if you live in a penthouse or a farmhouse. What does matter, though, is exercise and lots of it. Be aware, this love of human company also means that your new best friend will not make a good yard dog. Everything about this breed is larger than life, from their abundant shaggy coat to their outgoing quirky character. They also live

to around 12-years of age, so making this affable breed of dog a member of the family is a long-term commitment. For all these reasons, knowledge of this large breed is essential before committing to welcoming one into your family. Are you intending to go down the puppy route, or maybe offering a loving home to a rescue dog? Then the chapters of this guide will provide you

with all the information you need to get the best from your big bouncy bob tail.

The technology of paints, varnishes and allied products is changing rapidly and becoming more complex each day. The paint industry is an important segment of the chemical industry. Paint

technology utilizes the science of chemistry, physics and engineering. The paint industry is broadly classified into decorative and industrial segment. Decorative paints consist 70% of market. Paints, varnishes, and allied product industry is gaining ground at a rapid pace in modern time accompanied with closed advance in surface coating technology. They are

formulated for specific purposes like outside house paints and exterior varnishes are intended to give good service when exposed to weathering; interior wall paints are formulated to give excellent coverage. Varnish is one of the important parts of surface coating industry. Varnish is a transparent, hard, protective finish or film primarily used in wood finishing but

also for other materials. Varnishes are also applied over wood stains as a final step to achieve a film for gloss and protection. Paint is any liquid, liquefiable, or mastic composition which after application to a substrate in a thin layer is converted to an opaque solid film. It is most commonly used to protect, colour or provide texture to objects. The paint industry volume in India has been

growing at 15% per annum for quite some years now. As far as the future growth prospects are concerned, the industry is expected to grow at 12 to 13% annually over the next five years. The technology is required to produce different type of new paints and varnishes based on different type of uses. These newer products have enabled paint manufacturers to improve the performance properties of their paints

and coatings and so satisfy the more stringent requirements of our modern industrial society. The future for industrial paints, varnishes and allied product is bright.  `I found myself questioning my current views on globalization and international competition. In so doing, I have come to a fuller understanding of the dynamics of the process and have enjoyed a unique view into the minds of the decision makers' - Organization Studies `This book is an unusual and valuable addition to the literatures of international

business' - International Business Review `The first interesting feature of this study is the selection of industries.... The book provides some valuable insight into the geographic distribution of the world in the mind of the chief executives... a matter of interest not only to industry and academia, but also to policy makers.... The classification of international strategies

deducted from the interview data is another contribution that book makes.... The book has achieved its main goal of linking theory and practical experience [and] provides interesting reading.... The book translates the logic of the industry world into a nice theory leaving it up to the reader to accept or reject the accompanying business ethics and values' - Prometheus
 `A highly

effective analysis of the changing patterns of competition viewed from an international perspective. There is a plethora of books on globalization and internationalization of industries, but most are long on words and speculation, but short on hard evidence and perspective. Here, the approach of the authors is not to argue that the world is becoming more (or less) global, but to

provide a valuable insight into just how these forces are shaping industries, whether managers can influence these forces and what they might mean for those involve'- Charles Baden-Fuller, City Business School, Series Editor This book uses in-depth current data from a range of international business, and provides an important new framework for understanding international competitive

systems and formulating international business strategy.
