Digital Video offers comprehensive coverage of the MPEG-2 audio/visual digital compression standard. The treatment includes the specifics needed to implement an MPEG-2 Decoder, including the syntax and semantics of the coded bitstreams. Since the MPEG-2 Encoders are not specified by the standard, and are actually closely held secrets of many vendors, the book only outlines the fundamentals of encoder design and algorithm optimization.

Embedded Systems Architecture Bloomsbury Publishing This practical technical guide to embedded middleware implementation offers a coherent framework that guides readers through all the key concepts necessary to gain an understanding of this broad topic. Big picture theoretical discussion is integrated with down-to-earth advice on successful real-world use via step-by-step examples of each type of middleware implementation. Technically detailed case studies bring it all together, by providing insight into typical engineering situations readers are likely to encounter. Expert author Tammy Noergaard keeps explanations as simple and readable as possible, eschewing jargon and carefully defining acronyms. The start of each chapter includes a "setting the stage" section, so readers can take a step back and understand the context and applications of the

information being provided. Core middleware, such as networking protocols, file systems, virtual machines, and databases; more complex middleware that builds upon generic pieces, such as MOM, ORB, and RPC; and integrated middleware software packages, such as embedded JVMs, .NET, and CORBA packages are all demystified. Digital Television: DTV and the Consumer offers a pragmatic, more socially

oriented basis for understanding digital television. Beginning with a basic summary of how digital television works and how it evolved into its present state in the different television viewing environments (over-the-air, cable and satellite), author and researcher Book then offers the reader a more practical understanding of how digital television is currently being consumed in the household. Additionally, the text presents a summary of what consumers are saying regarding their digital television experience and what this data suggests for the future development of digital television business models. Unique to this volume are numerous Innovator Essays by some of the industry's digital television pioneers. These insightful essays – from significant DTV innovators such as Jim Goodmon, president and CEO of Capitol Broadcasting, home of the first commercial digital television broadcast – give brief snapshots of critical moments in the transition and rollout of DTV, while focusing on what the future holds for consumers and the broadcast and electronics

industries. The latest entry in Blackwell Publishing's Media and Technology series, *Digital Television: DTV and the Consumer* provides media students, scholars, and professionals a compelling perspective of the social and cultural presence of this emerging technological phenomenon. *Demystifying Embedded Systems Middleware* Harvard Business Press The electronic age is bringing sweeping changes to entertainment and media of all kinds, including publishing, broadcasting and film.
