Children at War is the first comprehensive book to examine the growing and global use of children as soldiers. P.W. Singer, an internationally recognized expert in twenty-first-century warfare, explores how a new strategy of war, utilized by armies and warlords alike, has targeted children, seeking to turn them into soldiers and terrorists. Singer writes about how the first American serviceman killed by hostile fire in Afghanistan—a Green Beret—was shot by a fourteen-year-old Afghan boy; how suspected militants detained by U.S. forces in Iraq included more than one hundred children under the age of seventeen; and how hundreds who were taken hostage in Thailand were held captive by the rebel "God's Army," led by twelve-year-old twins. Interweaving the voices of child soldiers throughout the book, Singer looks at the ways these children are recruited, abducted, trained, and finally sent off to fight in war-torn hot spots, from Colombia and the Sudan to Kashmir and Sierra Leone. He writes about children who have been indoctrinated to fight U.S. forces in Iraq and Afghanistan; of Iraqi boys between the ages of ten and fifteen who had been trained in military arms and tactics to become Saddam Hussein's Ashbal Saddam (Lion Cubs); of young refugees from Pakistani madrassahs who were recruited to help bring the Taliban to power in the Afghan civil war. The author, National Security Fellow at the Brookings Institution and director of the Brookings Project on U.S. Policy Towards the Islamic World, explores how this phenomenon has come about, and how social disruptions and failures of

development in modern Third World nations have led to greater global conflict and an instability that has spawned a new pool of recruits. He writes about how technology has made today's weapons smaller and lighter and therefore easier for children to carry and handle; how one billion people in the world live in developing countries where civil war is part of everyday life; and how some children—without food, clothing, or family—have volunteered as soldiers as their only way to survive. Finally, Singer makes clear how the U.S. government and the international community must face this new reality of modern warfare, how those who benefit from the recruitment of children as soldiers must be held accountable, how Western militaries must be prepared to face children in battle, and how rehabilitation programs can undo this horrific phenomenon and turn child soldiers back into children.

Experts consider how the lessons of World War I can help prevent U.S.–China conflict. A century ago, Europe's diplomats mismanaged the crisis triggered by the murder of Archduke Franz Ferdinand of Austria and the continent plunged into World War I, which killed millions, toppled dynasties, and destroyed empires. Today, as the hundredth anniversary of the Great War prompts renewed debate about the war's causes, scholars and policy experts are also considering the parallels between the present international system and the world of 1914. Are China and the United States fated to follow in the footsteps of previous great power rivals? Will today's alliances drag countries into tomorrow's wars? Can leaders manage power relationships

peacefully? Or will East Asia's territorial and maritime disputes trigger a larger conflict, just as rivalries in the Balkans did in 1914? In *The Next Great War?*, experts reconsider the causes of World War I and explore whether the great powers of the twenty-first century can avoid the mistakes of Europe's statesmen in 1914 and prevent another catastrophic conflict. They find differences as well as similarities between today's world and the world of 1914—but conclude that only a deep understanding of those differences and early action to bring great powers together will likely enable the United States and China to avoid a great war. Archivist Beecher White, the hero of the #1 NYT bestselling *Culper Ring* series, discovers a killer in Washington, DC, who's meticulously re-creating history's four presidential assassinations. From John Wilkes Booth to Lee Harvey Oswald, there have been more than two dozen assassination attempts on the President of the United States. Four have been successful. Historians have branded them as four lone wolves. But what if they were wrong? Beecher is about to discover the truth: that during the course of a hundred years, all four assassins were secretly working together. What was their purpose? For whom do they really work? And why are they planning to kill the current President? Beecher's about to find out. And most terrifyingly, he's about to come face-to-face with the fifth assassin.

Singer explores the greatest revolution in military affairs since the atom bomb: the dawn of robotic warfare We are on the cusp of a massive shift in military technology that threatens to make real the stuff of *I, Robot* and *The Terminator*. Blending historical evidence with interviews of an amazing cast of characters, Singer shows how technology is changing not just how wars are fought, but also the politics, economics, laws, and the ethics that surround war itself. Travelling from the battlefields of Iraq and Afghanistan to modern-day "skunk works" in the midst of suburbia, *Wired for War* will tantalise a wide readership, from military buffs to policy wonks to gearheads.

What does "cyber" even mean? And where does the idea come from? We live in an age increasingly defined by technology. But as we check our emails, board a plane, or read about the latest Russian hack, we rarely ask how the ideas that shaped our modern world originated. Thomas Rid's revelatory history of cybernetics pulls together disparate threads in the history of technology: from the invention of radar and pilotless flying bombs in World War Two, to artificial intelligence, virtual reality, cryptocurrencies, and present day fears about cyber security.

In *Catastrophic Success*, Alexander B. Downes compiles all instances of regime change around the world over the past two centuries. Drawing on this impressive data set, Downes shows that regime change increases the likelihood of civil war and violent leader removal in target states and fails to reduce the probability of conflict between intervening states and their targets. As Downes demonstrates, when a state confronts an obstinate or dangerous adversary, the lure of toppling its government and establishing a friendly administration is strong. The historical record, however, shows that foreign-imposed regime change is, in the long term, neither cheap, easy, nor

consistently successful. The strategic impulse to forcibly oust antagonistic or non-compliant regimes overlooks two key facts. First, the act of overthrowing a foreign government sometimes causes its military to disintegrate, sending thousands of armed men into the countryside where they often wage an insurgency against the intervener. Second, externally-imposed leaders face a domestic audience in addition to an external one, and the two typically want different things. These divergent preferences place imposed leaders in a quandary: taking actions that please one invariably alienates the other. Regime change thus drives a wedge between external patrons and their domestic protégés or between protégés and their people. *Catastrophic Success* provides sober counsel for leaders and diplomats. Regime change may appear an expeditious solution, but states are usually better off relying on other tools of influence, such as diplomacy. Regime change, Downes urges, should be reserved for exceptional cases. Interveners must recognize that, absent a rare set of promising preconditions, regime change often instigates a new period of uncertainty and conflict that impedes their interests from being realized.

"A novel that reads like science fiction but bristles with rich detail about how the next World War could be fought."
—Vice "A modern-day successor to tomes such as *The Hunt for Red October* from the late Tom Clancy." -USA Today
What Will World War III Look Like? Ghost Fleet is a page-turning imagining of a war set in the not-too-distant future. Navy captains battle through a modern-day Pearl Harbor; fighter pilots duel with stealthy drones; teenage hackers fight in

digital playgrounds; Silicon Valley billionaires mobilize for cyber-war; and a serial killer carries out her own vendetta. Ultimately, victory will depend on who can best blend the lessons of the past with the weapons of the future. But what makes the story even more notable is that every trend and technology in book—no matter how sci-fi it may seem—is real. The debut novel by two leading experts on the cutting edge of national security, *Ghost Fleet* has drawn praise as a new kind of technothriller while also becoming the new “must-read” for military leaders around the world. “A wild book, a real page-turner.”—*The Economist* “*Ghost Fleet* is a thrilling trip through a terrifyingly plausible tomorrow. This is not just an excellent book, but an excellent book by those who know what they are talking about. Prepare to lose some sleep.”—D. B. Weiss, writer of HBO’s *Game of Thrones* “It’s exciting, but it’s terrifying at the same time.”—General Robert Neller, commandant of the U.S. Marine Corps

Blue Magic, the latest designer drug linked to a rash of overdoses, might explain the needle mark on the arm of a young woman found dead in her Kansas City apartment. But when Star reporter Rich Azadian digs deeper, the clues point to a far more explosive story: MaryLee Stock was a special protégée of evangelical megapastor and power broker Cobalt Becker, who is poised to deliver his followers and the presidency to a firebrand right-wing senator in the next election. When Azadian sets out to prove that MaryLee’s death was no accident and she may have been carrying Becker’s genetically enhanced baby, the stakes become life itself. In 2023 America—bankrupt, violently divided by the culture wars, and beholden to archrival China—the rules of the game are complicated. With the danger mounting, the dead bodies of young women piling up, Chinese agents circling, and the US Department of National Competitiveness moving in to quash his investigation, Azadian’s only option is to go rogue, assemble a team of brilliant misfits like himself, and begin the fight of his life to find out who is killing these women and why, and if any others like them may still be alive. Fourteen years have passed since his first novel, *Jackapple Joe*, won the Prix Goncourt. His only happiness comes from dreaming about the golden summers of his boyhood that he spent in the company of an eccentric vintner who was the inspiration of Jay's debut novel, but who one day mysteriously vanished. Under the strange effects of a bottle of Joe's '75 Special, Jay decides to purchase a derelict yet promising chateau in Lansquenet-sous-Tannes. There, a ghost from his past waits to confront him, and his new neighbour, the reclusive Marise - haunted, lovely and dangerous - hides a terrible secret behind her closed shutters. Between them, there seems to be a mysterious chemistry. Or could it be magic? The impossible has spawned the unthinkable. In 2021, a quantum military experiment goes horrifically wrong. A multinational taskforce of ultra-modern warships is suddenly transported back in time to 1942 right into the path of the US naval battle group bound for Midway Atoll. History is rewritten in an instant as the future smashes into the past, and high-tech hardware goes head to head with World War Two technology. In the chaos that ensues, thousands are killed, but the maelstrom has only just begun. The veterans of Pearl Harbour have never seen a helicopter, or a cruise missile - let alone nanotechnology, ceramic bullets, and F22 Raptor stealth jetfighters. Allied and Axis forces are then caught in a desperate struggle to gain the upper hand - each hoping to tip the balance with a fist full of twenty first century firepower. What happens next is anybody's guess and everybody's nightmare.
