Real data. Real decisions. Real business. Statistics for Business and Economics by McClave,

Benson, and Sincich introduces statistics in the context of contemporary business. Inference is emphasized, with extensive coverage of data collection and analysis as needed to evaluate the reported results of statistical studies and make good decisions. The authors apply concepts with real data. Technology is used to help students develop statistical thinking and understand the assessment of credibility and the value of the inferences made

from data — both by those who consume and by those who produce them. The 14th Edition continues to highlight the discussion of ethical, data driven decision making. The Practice of Statistics for Business and Economics Pearson College Division This textbook discusses central statistical concepts and their use in business and economics. To endure the hardship of abstract statistical thinking, business and economics students need to see interesting

applications at an early stage. Accordingly, the book predominantly focuses on exercises, several of which draw on simple applications of non-linear theory. The main body presents central ideas in a simple, straightforward manner; the exposition is concise, without sacrificing rigor. The book bridges the gap between theory and applications, with most exercises formulated in an economic context. Its simplicity of style makes the book suitable for students at any level, and

every chapter starts out with simple problems. Several exercises, however, are more challenging, as they are devoted to the discussion of non-trivial economic problems where statistics plays a central part. *Statistics for Business & Economics* Statistics for Business and Economics Statistics for Business & Economics Steven C.
