Mighty Maps! (eBook) Capstone
Classroom

This is the chapter slice "Latitude, Longitude and Time Zones" from the full lesson plan "Mapping Skills with Google Earth" Students will learn in-depth how to read and create maps with our engaging resource designed for students

in grades three to five. Students will expand their knowledge of the elements on a map by exploring the lines of latitude, longitude and time zones. Then, students will learn about geographical and cultural features by exploring topographic and choropleth maps. Finally, students will learn the states and provinces found in North America as well as the different countries that make up the world. Comprised of reading passages, map activities, crossword,

word search and comprehension quiz, our resource incorporates curriculum-based lessons with Google Earth™ so students can further understand map reading with the help of visual and interactive technology. All of our content meets the Common Core State Standards and are written to Bloom's Taxonomy.

Maps and Globes iUniverse

Students will learn in-depth how to read and create maps with our engaging resource designed for students in grades three to five. Students will expand their knowledge of the elements on a map by exploring the lines of latitude, longitude and time zones. Then, students will learn about geographical and cultural features by exploring topographic and choropleth maps. Finally, students will learn the

states and provinces found in North America as well as the different countries that make up the world. Comprised of reading passages, map activities, crossword, word search, comprehension quiz, and test prep, our resource incorporates curriculum-based lessons with Google Earth™ so students can further understand map reading with the help of visual and interactive technology. All of our content is aligned to your State Standards and are written to Bloom's Taxonomy.

Elements of Map Projection with Applications to Map and Chart Construction Harper Collins

With 96 pages of authoritative world maps, a comprehensive index, 69 city maps, and a thematic section providing information on topics covered in

geography, humanities and economics courses, Philip's World Atlas is recommended for students as well as for general home reference. The 96 pages of physical and political maps give a balanced coverage of the world at well-chosen scales. The hill-shading on the physical maps provides an exceptionally vivid portrayal of landforms. The 32-page introductory section - 'The World in Focus' - covers key geographical themes such as the Earth's position in the Solar System, the structure of the Earth, climate and weather, the environment, population, resources, economics and international organizations. The 48-page 'World Cities' section provides urban-area and city-centre maps marking tourist sites for 69 of the world's most important cities, backed up by a

comprehensive index. Full-page satellite images for 9 of the cities featured complete this section. The 35,000-name index includes geographical features as well as towns and cities, with both letter-figure grid references and latitude and longitude co-ordinates.

Map Math Lerner Publishing Group

An information-packed paperback world atlas from Philip's, published in association with the Royal Geographical Society - fully revised and updated.

Mapping the World Philip's

This new edition includes the fact-packed 48-page 'World Geography' section, which provides maps, charts, graphs and diagrams on key themes, such as the Universe and Solar System, geology and landforms, climate, the environment, population, agriculture,

energy and minerals. Introduced by a stunning satellite image of the globe, the 1 29-page section of up-to-date digital world maps provides a balanced coverage of the world. Scales and projections have been chosen to maximize legibility and minimize distortion over the largest regions. Each map is accompanied by a locator diagram and adjoining pages indicator for ease of use. The hill-shading on the physical maps provides an exceptionally vivid portrayal of landforms, The 'Images of Earth' section provides spectacular satellite views of 1 5 major cities and regions around the world. Topical current affairs maps are provided for 'World: Regions in the News', including Iraq, Afghanistan and Israel/Palestine. The 55,000-name index includes

geographical features as well as towns and cities, with both letter-figure grid references as well as latitude and longitude co-ordinates, for speed and accuracy of use.

The World in a Grid : Latitude and Longitude | World Geography Book Grade 4 | Children's Geography & Cultures Books Classroom Complete Press

The primary purpose of his handbook is to provide educators with a variety of proven activities to make learning map and globe skills both enjoyable and meaningful for your students. The activities, which include cross-curriculum, can be used with multiple grade levels, small groups, or individually. Having Fun with Maps and globes is organized into six parts. Part

One introduces you to the basic goals of a Map and Globe Skills Program and concludes with some general "Tips for Teachers." Part Two provides activities for teaching the basic concepts of maps and globes. Because the ability to read and make maps involves many individual skills, the activities in this section are organized into several categories or subsets of skills. For each subset, several fully developed activities are presented, along with a "grab-bag" of additional activities that can be used in a stand-alone map and globe unit or to reinforce general map skills. Because map and globe skills support other curriculum areas besides social studies, Part Three provides activities organized by subject area. This allows you to locate the subject you are teaching and access

several related map and globe skill activities. Such cross-curriculum tasks will reinforce art, math, reading, science, language, and thinking skills. For easy access, all student activity sheets (called Supplements in this manual) are located in Part Four of the handbook. Part Five lists currently available resources for teachers and students. Beyond the standard lists of print materials, the author has provided sources for multimedia kits and computer software that will enrich anyone's program. An appendix, which includes map masters, a glossary of terms, and comparison charts, concludes the handbook. Although these materials are mentioned in various activities throughout the book, here they are more accessible as a reference and as a source from which to

draw in developing your own lessons, or an entire school program. Because of the wide range of resources Having Fun with Maps and Globes provides, this handbook is a wonderful companion to the supplementary materials you presently use in your school curriculum.

Mapping Skills with Google Earth Gr. 6-8 Firefly Books

From "Down East" to "Fifty-Four Forty or Fight!" to "Greenwich Mean Time," there are plenty of common phrases that invoke longitude, latitude, and direction. This immensely useful book covers topics such as compass roses, the history of longitude and latitude, Earth's time zones, and the relationship between latitude and climate. The book presents longitude, latitude and direction to lower elementary students in

a fun, approachable way.

Mapping Skills with Google Earth Gr. 3-5

*Webster's New World

Explores the world of maps, from the earliest maps used by astronomers to the astronauts who are mapping the earth from space.

U. S. and World Maps with Time Zones (12-Pack) Classroom Complete Press

The geographic coordinate system is expressed latitude and longitude.

Latitude represents the vertical geographic position while the longitude represents the horizontal position. Both the latitude and the longitude are composed of a set of numbers. Reading the coordinates now is important in finding your way around the world tomorrow. Start reading today.

Map Skills - The World (eBook) The

Rosen Publishing Group, Inc
Description: Hand drawn world map with longitude and latitude; reverse has a key written by Bertheaud.

Map Skills Classroom Complete Press
Explores the history of maps, examines some commonly used maps, and describes how to use them.

Zoom in on Physical Maps Simon and Schuster
"Every map is a tool, a product of human effort and creativity, that represents some aspects of our world or universe ... [This] course was powered by the belief that by exploring the mathematical ideas involved in creating and analyzing maps, students would see how mathematics could help them to understand and explain their world." -from the Preface
Portraits of the Earth exemplifies the

AMS's mission to bring the power and vitality of mathematical thought to the nonexpert. It is designed to teach students to think logically and to analyze the technical information that they so readily encounter every day. Maps are exciting, visual tools that we encounter on a daily basis: from street maps to maps of the world accompanying news stories to geologic maps depicting the underground structure of the earth. This book explores the mathematical ideas involved in creating and analyzing maps, a topic that is rarely discussed in undergraduate courses. It is the first modern book to present the famous problem of mapping the earth in a style that is highly readable and mathematically accessible to most students. Feeman's writing is inviting to

the novice, yet also interesting to readers with more mathematical experience. Through the visual context of maps and mapmaking, students will see how contemporary mathematics can help them to understand and explain the world. Topics explored are the shape and size of the earth, basic spherical geometry, and why one can't make a perfect flat map of the planet. The author discusses different attributes that maps can have and determines mathematically how to design maps that have the desired features. The distortions that arise in making world maps are quantitatively analyzed. There is an in-depth discussion on the design of numerous map projections—both historical and contemporary—as well as conformal and equal-area maps. Feaman

looks at how basic map designs can be modified to produce maps with any center, and he indicates how to generalize methods to produce maps of arbitrary surfaces of revolution. Also included are end-of-chapter exercises and laboratory projects. Particularly interesting is a chapter that explains how to use MapleR add-on software to make maps from geographic data points. This book would make an excellent text for a basic undergraduate mathematics or geography course and would be especially appealing to the teacher who is interested in exciting visual applications in the classroom. It would also serve nicely as supplementary reading for a course in calculus, linear algebra, or differential geometry. Prerequisites include a solid grasp of

trigonometry and basic calculus.
RWaterloo Maple, Inc., Ontario, Canada.

Philip's World Atlas Lorenz
Educational Press

Provides formulas for 68 different cartographic views of the world. The Directory proper is preceded by a theoretical introduction about map projections. The description of each projection system is accompanied by one or two maps illustrating the deformation characteristics, allowing quick evaluation of its merits and effective use of the map for a particular purpose. All maps shown have been produced and computed with the formulas given in the book.

The World in Maps Lorenz Educational Press

Traces the evolution of

mapmaking/cartography from ancient times to the present.

Having Fun with Maps and Globes
Classroom Complete Press

"Maps have power--they can instruct, make life easier, mislead, or even lie. This engaging text provides the tools to read, analyze, and use any kind of map and assess its strengths and weaknesses. Requiring no advanced math skills, the book presents basic concepts of symbolization, scale, coordinate systems, and projections. It gives students a deeper understanding of the types of maps they encounter every day, from turn-by-turn driving directions to the TV weather report. Readers also learn how to use multiple maps and imagery to analyze an area or region. The book includes 168 figures,

among them 22 color plates; most of the figures can be downloaded as PowerPoint slides from the companion website. Appendices contain a glossary, recommended resources, a table of commonly used projections, and more"--

World of Maps, The Philip's

This lavishly illustrated book provides a unique insight into the evolution of mapmaking and the science behind it, from the stone age to the digital age. Britain's leading cartographic author takes us on a historical journey through how the greatest maps were created. Exploring key cartographers and mapmaking methods, as well as fascinating interludes on subjects such as the very first maps, deliberate mistakes, and superlative maps, this comprehensive guide explores how the

techniques and technology have developed throughout human history:

- Evolving methods of surveying: from the Roman groma, through the naval instruments of the magnetic compass, astrolabes and sextants, to the 20th century revolution of aerial photography
- Drawing tools and materials: from Babylonian maps carved in clay, to digital maps created via touchscreen
- The introduction of various mapping conventions and key components of a map: from Ptolemy's introduction of longitude and latitude, through the 13th century origins of having north at the top, to the various projections used to represent the Earth. With visually stunning historic maps and antique instruments, this book will engross readers with its fascinating stories of

how we came to chart our world.

Map of the World by Jodocus Hondius, 1611 Ivy Press

Explore the varied features of the world while reinforcing basic map reading skills. Sixteen student pages and accompanying blackline and full-color maps coordinate to provide a relational study of the elevation, vegetation, products, population, and peoples of the world. Full-color maps are provided as transparencies for print books and PowerPoint slides for eBooks. Student pages challenge students to combine maps and additional resources in order to answer questions and make judgments. Question topics follow the Five Themes of Geography as outlined by the National Geographic Society: finding absolute and relative locations on

a map, relating physical and human characteristics to an area, understanding human relationships to the environment, tracing movement of peoples and goods throughout an area, and organizing countries and continents into regions for detailed study.

The Macmillan World Atlas Teaching and Learning Company

Describes the history of mapmaking and provides instructions for making maps.

Philip's World Atlas Guilford Publications

Introduces the principles of map reading and demonstrates how the use of latitudinal and longitudinal coordinates make it possible to find places, whether on a local or regional map or on a globe.

To the Ends of the Earth The Rosen Publishing Group, Inc

Move on from a basic understanding of

map reading to a more complex one with our engaging resource designed for students in grades six to eight. Students will further develop their ability to read and understand maps by looking at weather and population maps. Then, students will engage in mapping their country in detail, including states, provinces, capitals, cultural and geographical features. Finally, students will move on to mapping their continent

and then the world. Comprised of reading passages, map activities, crossword, word search, comprehension quiz, and test prep, our resource incorporates curriculum-based lessons with Google Earth™ so students can further understand the complexities of map reading with the help of visual and interactive technology. All of our content is aligned to your State Standards and are written to Bloom's Taxonomy.
