The Maritime Safety Committee (MSC) entrusted the revision of the Code of Safety for Fishermen and Fishing Vessels to its Sub-Committee on Stability and Load Lines and on Fishing Vessels Safety (SLF) and recommended that the recent developments in fishing vessel design and fishing operations should be taken into consideration. The revised Code was approved by MSC at its seventy-ninth session in 2004 and approved by the FAO Committee on Fisheries at its twenty-sixth session in March 2005 and the Governing Body of ILO at its 293rd Session in June 2005. The revised version of part A, Safety and Health Practice, of the Code is directed primarily towards Competent Authorities, training institutions, fishing vessel owners, representative organizations of

the crew, and non-governmental organizations having a recognized role in crew members' safety and health and training.

Towards principled access and operations Nova Science Pub Incorporated

These guidelines are intended to help those involved in managing fisheries to understand the range of objectives that an observer programme can meet and how these contribute towards the management of a fishery. The importance of scientific, compliance and information outputs is considered in relation to the requirements for developing and implementing management plans. The guidelines promote the use of observers as agents capable of contributing to many monitoring, sampling and compliance activities required in modern integrated fisheries management. The inputs, requirements and outputs of at-sea fishery observer programmes are presented, focusing on what they are, how they relate to the objectives of a programme and different options on how to develop them. The guidelines conclude with a design and maintenance strategy for an observer programme.

The safety record of lightering (the transfer of petroleum cargo at sea from a large tanker to smaller ones) has been excellent in U.S. waters in recent years, as evidenced by the very low rate of spillage of oil both in absolute terms and compared with all other tanker-related accidental spills. The lightering safety record is likely to be maintained or even improved in the future as overall quality improvements in the shipping industry are implemented. Risks can be reduced even further through measures that enhance sound lightering standards and practices, support cooperative industry efforts to maintain safety, and increase the availability of essential information to shipping companies and mariners. Only continued vigilance and attention to safety initiatives can avert serious accidents involving tankers carrying large volumes of oil.

Edition for 1983/84- published in 3 vols.: vol. 1, Organization descriptions and index; vol. 2,

International organization participation; vol. 3, Global action networks.

Management, Economics and Perspectives Routledge

This book focuses on contemporary women seafarers at a global level. It looks at issues surrounding the working conditions and welfare of women, from both developed and developing countries, employed aboard the world's merchant and passenger ships. Using research commissioned by the ILO, the book considers women's participation levels in the industry, and examines policies concerning their recruitment, training, maternity and employment rights, and other aspects of work and life at sea. It also gives first-hand accounts from women seafarers describing how they have dealt with discrimination, sexual harassment, parental disapproval and an array of other difficulties. The study examines the practices and policies of national and international regulatory agencies, employers, trade unions, and maritime education institutions. A series of recommendations that may further help the integration of women into shipboard communities is included.

Safety of Fishing Operations BRILL

The aim of this model course is to meet the mandatory minimum standards of competence for seafarers as electro-technical ratings, in the following functions: electrical, electronic and control engineering; maintenance and repair; and controlling the operation of the ship and care for persons on board, at the support level specified in table A- III/7 of the STCW Code

Fisheries Newsletter International Labour Organization

Transport costs have been, and still are, an important component of trade costs, which are one of the major determinants of the volume of trade, and thus of gross domestic product (GDP) and GDP growth. Studies show that two of the main determinants of transport costs are regulatory frameworks in transport sectors and transport infrastructure. The productivity and competitiveness of goods and services firms depends largely on access to low-cost and high-quality transport services, and those services have a powerful influence on economic growth. Countries commit themselves to increasing the efficiency of transport services, which can largely be achieved through increased competition and hence through liberalization of transport sectors. Since barriers to trade in transport services are typically regulatory in nature, this book provides a thorough discussion of international, regional, and country specific rules and regulations in those sectors. Concentrating on the EU, and Turkey in particular, it considers rules and regulations in transport sectors. It shows that economic liberalization pursued unilaterally, multilaterally, or regionally has beneficial effects for Turkey, and that the benefits from such liberalization are substantial. Furthermore, the volume shows that transport infrastructure is an important determinant of exports, and hence GDP and GDP growth.

The Magazine of the International Maritime Organization IMO Publishing

This volume provides a detailed legal analysis of the fourth pillar of the international maritime regulatory regime, the comprehensive Maritime Labour Convention, 2006, and its provisions to achieve decent work for seafarers and a level playing field for shipowners.

On-board assessment National Academies Press

The aquaculture industry is fast expanding around the globe and causing major environmental and social disruptions. The volume is about getting a 'good governance' grip on this important industry. The book highlights the numerous law and policy issues that must be addressed in the search for effective regulation of aquaculture. Those issues include among others: the equitable and fair assignment of property rights; the design of effective dispute resolution mechanisms; clarification of what maritime laws apply to aquaculture; adoption of a proper taxation system for aquaculture; resolution of aboriginal offshore title and rights claims; recognition of international trade law restrictions such as labeling limitations and food safety requirements; and determination of whether genetically modified fish should be allowed and if so under what controls. This book will appeal to a broad range of audiences: undergraduate and postgraduate students, academic researchers, policy makers, NGOs, practicing lawyers and industry representatives.

Code of Safety for Fishermen and Fishing Vessels, 2005: Safety and health practice Fao

Comprises: (1) a summary of the replies received by the Office to each of the five questions posed by the Office in Report IV(1), followed by: an overview of the replies; a brief account of the related discussion at the Interregional Tripartite Round Table on Labour Standards for the Fishing Sector; and the Office commentary based on the replies and the Round Table discussions; (2) additional commentary by the Office; and (3) an appendix containing the report of the Round Table with appendices containing submissions to the Round Table by the Employers and the Government of Japan.

Promoting Sustainable Fisheries IMO Publishing

This book provides a comprehensive examination of the different aspects of IUU fishing and the various measures embodied in international fisheries and related instruments, and those adopted by regional fisheries management organisations and individual States to combat IUU fishing.

Annual Review of United Nations Affairs Twayne Publishers

Manual on Oil Pollution - Section V - Administrative Aspects of Oil Pollution Response, 2009 Edition. The Marine Environment Protection Committee (MEPC), at its thirty-third session, agreed that a new section V of the IMO Manual on Oil Pollution, dealing with administrative aspects and, in particular, with the roles and functions of entities which could be involved in an oil pollution emergency and its aftermath, should be developed. The present text is a revision of the first edition of the Manual, published in 1998, taking into account changes and new information on the topic since the original version. This section of the Manual on Oil Pollution is intended to provide the reader, in particular on scene commanders, lead agencies and others involved in the management of oil pollution response, with an appreciation of the various interests involved in an oil pollution emergency and its aftermath, as well as a general review of the international legal regimes governing limitation of liability and compensation for oil pollution damage. This section is not intended to provide an authorized or definitive commentary on the legal relationships between

the various entities involved in an oil pollution emergency or an interpretation of relevant international conventions. The reference section includes sources of more comprehensive information on these subjects, and the reader is encouraged to make use of them if more detailed information is required.

Port state control BRILL

A fishery is an area with an associated fish or aquatic population which is harvested for its value (commercial, recreational, subsistence). It can be saltwater or freshwater, wild or farmed. Examples are the salmon fishery of Alaska, the cod fishery off the Lofoten islands or the tuna fishery of the Eastern Pacific. Most fisheries are marine, rather than freshwater; most marine fisheries are based near the coast. This is not only because harvesting from relatively shallow waters is easier than in the open ocean, but also because fish are much more abundant near the coastal shelf, due to coastal upwelling and the abundance of nutrients available there. However, productive wild fisheries also exist in open oceans, particularly by seamounts, and inland in lakes and rivers. Most fisheries are wild fisheries, but increasingly fisheries are farmed. Farming can occur in coastal areas, such as with oyster farms, but more typically occur inland, in lakes, ponds, tanks and other enclosures. This book is devoted to the management, economics and perspectives of fisheries.
