This revised set of resources for Cambridge International AS and
A Level Accounting syllabus (9706) is thoroughly updated for the
latest version of the curriculum. Written by experienced authors,
this coursebook unpacks accounting concepts in an engaging and
accessible style. With clear definitions of up-to-date terminology,
this resource is ideal for learners with a wide range of abilities,
including those whose first language is not English. Practical
walkthroughs illustrate the application of key accounting policies

and practices, and activities reinforce knowledge and build
analytical and evaluation skills. At the end of each chapter there
are opportunities to practice multiple-choice and structured
questions to help prepare students for their assessment.

Further Developments and Policy Use BoD – Books on Demand
Ecosystem Services: Global Issues, Local Practices covers
scientific input, socioeconomic considerations, and governance
issues on ecosystem services. This book provides hands-on
transdisciplinary reflections by administrators and sector
representatives involved in the ecosystem service community.
Ecosystem Services develops shared approaches and scientific
methods to achieve knowledge-based sustainable planning and
management of ecosystem services. Professionals engaged in
ecosystem service implementation have two options: de-
emphasize the ecological and socioeconomic complexity and
advance in the theoretical, abstract field, or try to develop

research that is policy relevant and inclusive in an uncertain environment. This book provides a wide overview of issues at stake, of interest for any professional wishing to develop a broader view on ecosystem service science and practice. Examines a broad scope of relevant issues to create common understanding in the ecosystem services community Includes contributions from several backgrounds, providing a broad, multidisciplinary view Offers recommendations to develop a thorough understanding and management of ecosystem services based on tools and research in larger territories as well as on local scales

This book transfers the newest service research concepts, such as value co-creation, to family forestry context. The book is aimed at as learning material for higher-education students in Western economies, and as a handbook for forest scientists worldwide. It has a strong theoretical base, but also a practical orientation with examples of novel forest services from different regions and contexts. The five parts of the book are: I Conceptualization of Service Approaches in Family Forestry; II Market and Policy Environment; III Public Service and Business Innovations; IV Communication, Cooperation, and Organizations

for Services; and V Transitions Governance. Each part begins with a chapter that is more conceptual and thus sets the stage for the subsequent chapters, which then focus on a regional perspective or some more specific theme under the part's coverage.

This open access book surveys the frontier of scientific river research and provides examples to guide management towards a sustainable future of riverine ecosystems. Principal structures and functions of the biogeosphere of rivers are explained; key threats are identified, and effective solutions for restoration and mitigation are provided. Rivers are among the most threatened ecosystems of the world. They increasingly suffer from pollution, water abstraction, river channelisation and damming.

Fundamental knowledge of ecosystem structure and function is necessary to understand how human activities interfere with natural processes and which interventions are feasible to rectify this. Modern water legislation strives for sustainable water resource management and protection of important habitats and species. However, decision makers would benefit from more profound understanding of ecosystem degradation processes and of innovative methodologies and tools for efficient mitigation and restoration. The book provides best-practice examples of sustainable river management from on-site studies, European-wide analyses and case studies from other parts of the world. This book will be of interest to researchers in the field of aquatic ecology, river system functioning, conservation and restoration, to postgraduate students, to institutions involved in water management, and to water related industries.

Resource Economics engages students and practitioners in natural resource and environmental issues from both local and global standpoints. The fourth edition of this approachable but rigorous text provides a new focus on risk and uncertainty as well as new applications that address the effect of new energy technologies on scarcity and climate change mitigation and adaptation, while preserving and systematically updating the approach and key features that drew many thousands of readers to the first three editions.

The six-volume set LNCS 8579-8584 constitutes the refereed proceedings of the 14th International Conference on Computational Science and Its Applications, ICCSA 2014, held in Guimarães, Portugal, in June/July 2014. The 347 revised papers presented in 30 workshops and a special track were carefully reviewed and selected from 1167. The 289 papers presented in the workshops cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security.

While biodiversity loss is an ecological phenomenon, it also has further dimensions – political, social and, last but not least, economic. From the economic perspective, the rapid loss of biological diversity can be viewed in two ways. First, the consequence of this deterioration process is a loss of options and an increase in scarcity of the environmental ‘good’, biodiversity. Second, economic activity and the structure of global and local economic institutions have frequently been identified as the major drivers of biodiversity loss. In economic terms, this constitutes a market failure – market-based economic activities

lead to processes which undermine the long-term stability of these very activities. This book provides an ecological economic perspective on the value of diversity in ecosystems. Combining insights from various sub-disciplines of ecology and environmental/ecological economics, the author constructs a conceptual framework which identifies the ways in which biodiversity influences human well-being and offers a novel, unifying perspective on the economic value of biodiversity. This framework demonstrates that biodiversity's economic value mainly results from uncertainty about the future, regarding both supply of and demand for ecosystem services, and interconnections between ecosystems. The book goes on to identify suitable methods for economic valuation of biodiversity and discusses the currently underdeveloped and underused approach of deliberative monetary valuation. Combining a strong theoretical framework with practical examples, this book will be of great interest to students and researchers of ecological economics, ecosystem services, environmental values and environmental and resource economics.

For many years countries have taken advantage of one another's experiences in formulating social policies and even in designing specific interventions. Often such transfers have occurred on a fairly casual level; sometimes greater rigor has been present. In either case, the goal has been to learn from previous experience—at least to avoid repeating the mistakes of the past. In light of the promise that such intercountry transfers hold, it is somewhat surprising that so little energy has gone into careful analytic work on the behavior of households in differing countries and how they respond to various changes, especially those resulting from shifts in public policy. This lack of careful analysis was a major force that motivated The Urban Institute to establish an international studies program in 1982. This volume represents one of the early products of the collaborative efforts that this initiative has spawned. The results of the comparison of the housing markets in West Germany and the United States presented here offer

examples of the type of unexpected conclusions that may emerge from careful analyses as well as more anticipated outcomes. Despite the many similarities in the economies of the United States and West Germany and the general free-market orientation of their housing sectors, the papers in this volume document important differences in the way households make decisions about their housing and the consequences of these decisions.

Measuring Outcome in the Public Sector Springer Nature
The aim of *Ecosystem Services and Global Ecology* is to give an overview and report from the frontiers of research of this important and interesting multidisciplinary area. Ecosystem services as a concept plays a key role in solving global environmental and human ecological crises and associated other problems, especially today when the sixth major extinction event of the history of the biosphere is in progress, and humanity can easily become a victim of it. Human activity is rapidly

transforming the surface of the Earth, its biosphere, atmosphere, soil, and water resources. Ecological processes happen over a long time scale, thus damage caused by human activity will be perceptible after decades or even centuries. We hope that our book will be interesting and useful for researchers, lecturers, students, and anyone interested in this field.

This book is a state-of-the-art compilation of the latest information on ecosystem services of agroforestry. The last two decades have seen a surge in literature on the ecosystem services of sustainable agriculture practices, including that of agroforestry; however, compilation and synthesis of such information from agroforestry have been limited. This book fills that void by bringing in a number of experts from around the world. In addition to presenting the multiple dimensions of ecosystem services provided by major agroforestry practices, the book also offers case studies from both tropical and temperate regions of the world. Information from this book can be used to design land management practices for climate change mitigation, ecosystem benefits, agricultural productivity and sustainability, and for survival and profitability of family farms and to conserve biodiversity. While synthesizing information of the biophysical aspects of ecosystem services, the book also outlines the socioeconomic and policy dimensions, including appropriate incentive models to enhance adoption of agroforestry so that society at large can enjoy these important benefits.

Cost-Benefit Analysis and the Environment Further Developments and Policy Use Springer Nature

The idea that nature provides services to people is one of the most powerful concepts to have emerged over the last two decades. It is shaping our understanding of the role that biodiverse ecosystems play in the environment and their benefits for humankind. As a result, there is a growing interest in operational and methodological issues surrounding ecosystem services amongst environmental managers, and many institutions are now developing teaching programmes to equip the next generation with the skills needed to apply the concepts more effectively. This handbook provides a comprehensive reference text on ecosystem services, integrating natural and social science (including economics). Collectively the chapters, written by the world's leading authorities, demonstrate the importance of biodiversity for people, policy and practice. They also show how the value of ecosystems to society can be expressed in monetary and non-monetary terms, so that the environment can be better taken into account in decision making. The significance of the ecosystem service paradigm is that it helps us redefine and better communicate the relationships between people and nature. It is shown how these are essential to resolving challenges such as sustainable development and

poverty reduction, and the creation of a green economy in developing and developed world contexts.

This book offers you a brief, but very involved look into the operations in the drilling of an oil & gas wells that will help you to be prepared for job interview at oil & gas companies. From start to finish, you'll see a general prognosis of the drilling process. If you are new to the oil & gas industry, you'll enjoy having a leg up with the knowledge of these processes. If you are a seasoned oil & gas person, you'll enjoy reading what you may or may not know in these pages. This course provides a non-technical overview of the phases, operations and terminology used on offshore drilling platforms. It is intended also for non-drilling personnel who work in the offshore drilling, exploration and production industry. This includes marine and logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of drilling operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.
