 Empirical research can be conducted and analysed using qualitative or quantitative methods. Quantitative research: Quantitative research methods are used to gather information through numerical data. It is used to quantify opinions, behaviors or other defined variables. These are predetermined and are in a more structured format.

 It describes empirical methods, beginning with the generalized method of moments (GMM) and viewing other methods as

special cases of GMM; offers a comprehensive review of fund performance evaluation; and presents selected applied topics, including a substantial chapter on predictability in asset markets that covers predicting the level of returns, volatility and higher moments, and predicting cross-sectional differences in returns.
