This book is an updated effort in summarizing the trending topics and new hot research lines in solving dynamic problems using metaheuristics. An analysis of the present state in solving complex problems quickly draws a clear picture: problems that change in time, having noise and uncertainties in their definition are becoming very important. The tools to face these problems are still to be built, since existing techniques are either slow or inefficient in tracking the many global optima that those

problems are presenting to the solver technique. Thus, this book is devoted to include several of the most important advances in solving dynamic problems. Metaheuristics are the more popular tools to this end, and then we can find in the book how to best use genetic algorithms, particle swarm, ant colonies, immune systems, variable neighborhood search, and many other bioinspired techniques. Also, neural network solutions are considered in this book. Both, theory and practice have been addressed in the chapters of the book. Mathematical background and methodological tools in solving this new class of problems and applications are included. From the applications point of view, not just academic benchmarks are dealt with, but also real world applications in logistics and bioinformatics are discussed here. The book then covers theory and practice, as well as discrete versus continuous dynamic optimization, in the aim of

creating a fresh and comprehensive volume. This book is targeted to either beginners and experienced practitioners in dynamic optimization, since we took care of devising the chapters in a way that a wide audience could profit from its contents. We hope to offer a single source for up-to-date information in dynamic optimization, an inspiring and attractive new research domain that appeared in these last years and is here to stay.

The highly praised book in communications networking from IEEE Press, now available in the Eastern Economy Edition. This is a non-mathematical introduction to Distributed Operating Systems explaining the fundamental concepts and design principles of this emerging technology. As a textbook for students and as a self-study text for systems managers and software engineers, this book provides a concise and an informal introduction to the subject.

Low-lying countries, such as the Netherlands, are strongly dependent on good and safe sea defences. In the past, the design of dikes and revetments was mostly based on vague experience, rather than on general valid calculation methods. The demand for reliable design methods for protective structures has, in the Netherlands, resulted in increased research in this field. These contributions have been prepared by Dutch experts participating in the study groups of the Technical Advisory Committee on Water Defences. The book opens with an outline of general strategy and methodology on sea defences, illustrated in the following chapters by technical information on specific items and Dutch experience, and it ends with more general aspects such as probabilistic approach, integral (multifunctional) design, management & safety assessment. Together, these chapters provide an almost complete technical overview of the items needed for the design and maintenance of dikes and revetments. The enclosed CRESS-program allows for an initial estimation of hydraulic loads and preliminary design.

From the publisher. Basic Conducting Techniques is a practical and innovative textbook that provides sound, time tested procedures and material for the beginning conducting class. Students and professors have responded enthusiastically to the hands-on, conductor competency approach of this student-oriented textbook with its clearly stated objectives and performance tests.

Inventing Pollution Houghton Mifflin Harcourt

Were Thomas Jefferson alive to read this book, he would recognize every sentence, every elegant turn of phrase, every lofty, beautifully expressed idea. Indeed, every word in the book is his. In an astonishing feat of editing, Eric S. Petersen has culled the entirety of Thomas Jefferson's published works to fashion thirty-four original essays on themes ranging from patriotism and liberty to hope, humility, and gratitude. The result is a lucid, inspiring distillation of the wisdom of one of America's greatest political thinkers. From his personal motto—"Rebellion to tyrants is obedience to God"—to his resounding discourse on "life, liberty and the pursuit of happiness" in the Declaration of Independence, Jefferson defined the essential truth of the American spirit. In the essays that Petersen has crafted from letters, speeches, and public documents, Jefferson's unique moral philosophy and vision shine through. Among the hundreds of magnificent sentences gathered in this volume, here are Jefferson's pronouncements on Gratitude: "I have but one system of ethics for men and for nations— to be grateful, to be faithful to all engagements and under all circumstances, to be open and generous." Religion: "A concern purely between our God and our consciences." America's national character: "It is part of the American character to consider nothing as desperate; to surmount every difficulty with resolution and contrivance." Public debt: "We shall all consider ourselves unauthorized to saddle posterity with our debts, and morally bound to pay them ourselves." War: "I abhor war and view it as the greatest scourge of mankind." In stately measured cadences, these thirty-four essays provide timeless guidance on leading a spiritually fulfilling life. Light and Liberty is a triumphant work of supreme eloquence, as uplifting today as when Jefferson first set these immortal sentences on paper.

Going as far back as the thirteenth century, Britons mined and burned coal. Britain's supremacy in the nineteenth century depended in large part on its vast deposits of coal, which powered industry, warmed homes, and cooked food. As coal consumption skyrocketed, the air in Britain's cities and towns filled with ever-greater and denser clouds of smoke. Yet, for much of the nineteenth century, few people in Britain even considered coal smoke to be pollution. *Inventing Pollution* examines the radically new understanding of pollution that emerged in the late nineteenth century, one that centered not on organic decay but on coal combustion. This change, as Peter Thorsheim argues, gave birth to the smoke-abatement movement and to new ways of thinking about the relationships among humanity, technology, and the environment. Even as coal production in Britain has plummeted in recent decades, it has surged in other countries. This reissue of Thorsheim's far-reaching study includes a new preface that reveals the book's relevance to the contentious national and international debates—which aren't going away anytime soon—around coal, air pollution more generally, and the grave threat of human-induced climate change.

Reinventing Modern Motherhood Modern Library

Primarily intended for the undergraduate students of mathematics, physics and engineering, this text gives in-depth coverage of differential equations and the methods for solving them. The book begins with the definitions, the physical and geometric origins of differential equations, and the methods for solving the first order differential equations. Then it goes on to give the applications of these equations to such areas as biology, medical sciences, electrical engineering and economics. The text also discusses, systematically and logically, higher order differential equations and their applications to telecommunications, civil engineering, cardiology and detection of diabetes, as also the methods of solving simultaneous differential equations and their applications. Besides, the book provides a detailed discussion on Laplace transforms and their applications, partial differential equations and their applications to vibration of stretched string, heat flow, transmission lines, etc., and calculus of variations and its applications. The book, which is a happy fusion of theory and application, would also be useful to postgraduate students. NEW TO THIS EDITION • New sections on: (a) Equations reducible to linear partial differential equations (b) General method for solving the second order non-linear partial differential equations (Monge's Method) (c) Lagrange's equations of motion • Number of solved examples in Chapters 5, 7, 8, 9 and 10.

I don't know how she does it! is an oft-heard refrain about mothers today. Funnily enough, most moms agree they have no idea how they get it done, or whether they even want the job.

Trisha Ashworth and Amy Nobile spoke to mothers of every stripe--working, stay-at-home, part-time--and found a surprisingly similar trend in their interviews. After enthusing about her lucky life for twenty minutes, a mother would then break down and admit that her child's first word was "Shrek." As one mom put it, "Am I happy? The word that describes me best is challenged." Fresh from the front lines of modern motherhood comes a book that uncovers the guilty secrets of moms today . . . in their own words. *I Was a Really Good Mom Before I Had Kids* diagnoses the craziness and offers real solutions, so that mothers can step out of the madness and learn to love motherhood as much as they love their kids.

In each chapter of this unique volume, an exemplary teacher collaborates with a prominent scholar to present real-world strategies for putting literacy research to work in grades 5-12. These lively dialogues tackle key questions in adolescent literacy, including issues of motivation, critical thinking skills, content-area writing, differentiated instruction, assessment, English language learning, and technology. Suggestions for incorporating adolescents' out-of-school literacies and working with reading specialists and coaches show how to build connections between the classroom and wider communities. In-depth portraits of challenges and successes in the classroom, practical instructional tips, and stimulating questions for reflection make the book a valuable resource for inservice and preservice teachers.

This title describes the state of the art in all areas of spatial marketing, discussing the various constituents which make up the geography of markets. Demand varies according to location and can be measured according to revenue, the number of households, spending patterns and lifestyles. Supply is also dependent on position, because prices, services, products and available shops rely on location, while the difference between supply and demand is the rationale for the role of the trader. The book also covers the way geographic techniques help to solve marketing problems and contains chapters written by contributors with extensive experience in this field; given that it is crucial for companies to direct their marketing correctly at their target audience, this will be indispensable reading for those involved in this area.
