A Professional's Guide to Building Family Management Skills Oxford University Press

An expert clinician brings attachment theory into the realm of parenting skills. Attachment security and affect regulation have long been buzzwords in therapy circles, but many of these ideas—so integral to successful therapeutic work with kids and adolescents— have yet to be effectively translated to parenting practice itself. Moreover, as neuroscience reveals how the human brain is designed to work in good relationships, and how such relationships are central to healthy human development, the practical implications for the parent-child attachment relationship become even more apparent. Here, a leading attachment specialist with over 30 years of clinical experience brings the rich and comprehensive field of attachment theory and research from inside the therapy room to the outside, equipping therapists and caregivers with practical parenting skills and techniques rooted in proven therapeutic principles. A guide for all parents and a resource for all mental health clinicians and parent-educators who are searching for ways to effectively love, discipline, and communicate with children, this book presents the techniques and practices that are fundamental to optimal child development and family functioning—how to set limits, provide guidance, and manage the responsibilities and difficulties of daily life, while at the same time communicating safety, fun, joy, and love. Filled with valuable clinical vignettes and sample

dialogues, Hughes shows how attachment-focused research can guide all those who care for children in their efforts to better raise them.

How many parents have found themselves thinking: I can't believe I just said to my child the very thing my parents used to say to me! Am I just destined to repeat the mistakes of my parents? In *Parenting from the Inside Out*, child psychiatrist Daniel J. Siegel, M.D., and early childhood expert Mary Hartzell, M.Ed., explore the extent to which our childhood experiences actually do shape the way we parent. Drawing upon stunning new findings in neurobiology and attachment research, they explain how interpersonal relationships directly impact the development of the brain, and offer parents a step-by-step approach to forming a deeper understanding of their own life stories, which will help them raise compassionate and resilient children. Born out of a series of parents' workshops that combined Siegel's cutting-edge research on how communication impacts brain development with Hartzell's thirty years of experience as a child-development specialist and parent educator, *Parenting from the Inside Out* guides parents through creating the necessary foundations for loving

and secure relationships with their children.
