Principles of Accounting Volume 1 - Financial Accounting CRC Press

There is increasing interest in accounting issues in China. Despite a relatively short history, China's stock market is the world's second largest. This growth has been accompanied by increasing demand for accounting information alongside reforms of accounting and auditing rules, as international investors have paid increasing attention to investment opportunities in this dynamic and energetic country with a large population and economic growth potentials. Despite this, at present there are few books which offer students, academics and practitioners a comprehensive guide to current accounting issues in China. The *Routledge Companion to Accounting in China* fills this important gap in the literature. The volume is organized in six thematic sections which cover capital market and corporate finance, financial accounting, managerial accounting, auditing, taxation and internal controls. The structure is intended to reflect the increasing diversity of contemporary accounting issues in China, including a balanced overview of current knowledge, identifying issues and discussing relevant debates. This book is a prestigious reference work which offers students, academics and practitioners an introduction to current accounting issues

in the emerging market of China.

This book investigates current resistance to the ongoing change from US Generally Accepted Accounting Principles (GAAP) to International Financial Reporting Standards (IFRS). 138 countries have, thus far, adopted IFRS as a singular accounting language, while the Securities and Exchange Commission (SEC), the Financial Accounting Standard Board (FASB), and the International Accounting Standard Board (IASB) have determined that IFRS should be adopted optionally in the United States by 2016. The book shows that IFRS should act as a singular accounting language, which will promote high transparency and a better economic position in the world financial market.
