SymbolabSuppose you
want to find the solutions
to the quadratic equation

$x^2 - 5x = 0$ Matlab can
solve this with the solve
command. By default this
solves the symbolic
expression equal to zero.
First we symbolically
define our variable x and
then apply the command.
Try this: `syms x solve
(x^2 - 5 * x) ans = 0 5`
That was easy! MATLAB
found both of the
solutions.Symbolic
Solutions - University Of
MarylandWhen people

learn to see the problem they have with a thing as a small scale symbol of a large problem they have inside, they can easily find a solution. They will need to not focus on the small scale and look at their inner problems. They will usually solve the inner problem to find that the outer problem is not there anymore. Symbolic Meaning of Problems | SunSigns.Org QuickMath allows students to get instant solutions to all kinds of math problems, from algebra and equation solving right

through to calculus and matrices. Step-by-Step Math Problem Solver Solutions of a system of equations, returned as symbolic variables. The number of output variables or symbolic arrays must be equal to the number of independent variables in a system. If you explicitly specify independent variables vars, then the solver uses the same order to return the solutions. Equations and systems solver - MATLAB solve Symbolic allows you to add new math

 Why do we still do symbolic math? because you read that (...) most practical problems (algebraic equations, differential equations) do not have symbolic solution, but only numerical. Well, I would say you would NOT even be able to HAVE your 'most practical problems, like algebraic or differential equations', WITHOUT symbolic math.
