Secrets of the CPIM Exam SAGE

A supply chain is a network of retailers, distributors, transporters, storage facilities and suppliers that participate in the sale, delivery and production of a particular product. The concept of supply chain often involves backward integration - acquiring ownership of one's supply chain (in the hope of reducing supplier power and thus reducing input costs). The four major functional components are: - demand planning - manufacturing planning and scheduling - supply planning - transportation planning The Certified Supply Chain Professional (CSCP) certification is essential for professionals involved in the areas of supplier and customer relations, international trade, the use of information technology to enable the supply chain, and physical logistics. Candidates must pass a 4-hour exam in order to earn the CSCP designation. The major topics covered included: Supply Chain Management Fundamentals Building Competitive Operations, Planning, and Logistics Managing Customer and Supplier Relationships Using Information Technology to Enable Supply Chain Management Officially, CPIM focuses primarily on manufacturing and provides an in-depth view of materials management, master scheduling, production planning, forecasting, and quality improvement within an organization, while CSCP takes a broader view to encompass all steps throughout the supply chain. In reality, the CSCP exam and the CPIM BSCM exam share a lot of common topics on SCM. This ExamFOCUS Study Notes build a solid focus while revisiting key examination topics relevant to the CSCP exam (and also to the first CPIM module - BSCM). Whether you are just starting to study, cramming at the last minute, or simply looking to refresh, this could prove to be a lifesaver! To succeed in the CSCP exam, you need to get yourself truly familiar with the most important information by going through sufficiently focused revision. This is

where we fill the gap - you may think of our product as the unofficial supplement to the regular training class, or you may view it as a standalone module with a focus on building up your exam readiness. As an effective learning aid implemented in the format of study notes, the ExamFOCUS Study Notes package is designed to present information in an easy-to-understand, conversational format. Notes are well-written, technically accurate and completely representative of the key information covered by the exam.

The modules are: Module 1 - Supply Chain Design Module 2 - Supply Chain Planning and Execution Module 3 - Supply Chain Improvements and Best Practices There are overlapping knowledge, and it is suggested that you study these modules together. Officially, CPIM focuses primarily on manufacturing and provides an in-depth view of materials management, master scheduling, production planning, forecasting, and quality

improvement within an organization, while CSCP takes a broader view to encompass all steps throughout the supply chain. In reality, the CSCP exam and the CPIM BSCM exam share a lot of common topics on SCM. This ExamFOCUS Study Notes builds a solid focus while revisiting key examination topics relevant to the CSCP exam (and also to the first CPIM module - BSCM). It helps in straight-forward fundamental knowledge establishment. The real CSCP exam questions do not appear to be as straight forward though. In fact, many questions are presented to do nothing other than to get you totally confused... Just bear in mind, you will need to do a lot of logical thinking to figure out the best possible answers, and you must be able to link multiple concepts together....

SMR was the final module to take in the past. Now it becomes module 1 of the new part 2 exam. Is it tough? Well, in a sense, yes. It is tough because there is no fixed answer to the test questions. You are asked to choose the best possible answer among all potentially OK answers. Also, most questions are long and with complicated scenarios to confuse you. To pick up the "politically correct" answers you have to use your business sense to make judgment on a case by case basis. SMR is all about supply-side management at a higher global and strategic level. What is serious supply management all about? Accenture has developed seven principles of supply-chain management: 1. Segment customers based on their service needs. 2. Design the logistics network based on service requirements. 3. Listen to the signals of market demand and plan accordingly. 4. Differentiate products based on actual consumer demand. 5. Strategically manage the sources of supply. 6. Develop a supply-chain-wide technology strategy. 7. Adopt measures that apply to every link in the supply chain. Because of advances in manufacturing and distribution, the cost of developing new products and services is dropping, and time to market is speeding up. This has resulted in increasing customer demands, local and global competition, and increased pressure on the supply chain. To stay competitive, companies must reinvent themselves so that the supply chain-sourcing and procurement, production scheduling, order fulfillment, inventory management, and customer care-is no longer a cost-based back-office exercise, but rather a flexible operation designed to effectively address today's challenges. If you have been specializing in manufacturing or shop floor functions, it is now the time to move yourself to a managerial position - you need to see things from a broader MBA style perspective.
