"Over 15 chapters, Dunaway transforms what we know about icons and events. Seeing Green is the first history of ads, films, political posters, and magazine photography in the postwar American environmental movement. From fear of radioactive fallout during the Cold War to

anxieties about global warming today, images have helped to produce what Dunaway calls "ecological citizenship," telling us that "we are all to blame." Dunaway heightens our awareness of how depictions of environmental catastrophes are constructed, manipulated, and fought over" -- Publisher information.

The future will be powered by sustainable thinking in business organizations governments and everyday life. This revolutionary book tackles climate change sustainability and life success by starting with your mind. Black in America John Wiley & Sons  
Debuting in its first edition, this book is organized around the approach that American politics can best be understood by examining the issues that reflect the ideas, principles, concerns, fears, morals and hopes of the American people. *Debates, Differences and Divisions* looks at twenty-five hot button issues affecting American politics and policy today. The author argues that these issues are the heart and soul of the American political system, serving as the basis for the disagreements that drive our political system into action.

Rashi, the medieval French rabbi Shlomo Yitzchaki (1040–1105), authored monumental commentaries on the Hebrew Bible and the Babylonian Talmud. With *The JPS Rashi Discussion Torah Commentary*, his commentary on the Torah—regarded as the most authoritative of all Torah commentaries—is finally accessible to the entire Jewish community. Steven and Sarah Levy quote from the biblical text in both Hebrew and English, highlight Rashi’s comments relating to the parashah, and delve into his perceptive moral messages in the context of twenty-first-century dilemmas. Each portion features three essays with analysis and discussion questions that

draw on universal human experiences, enabling families and Shabbat study groups to deepen their understanding of Rashi and the portion over the three Sabbath meals. Readers with little or no knowledge of Hebrew, the Torah, or Jewish practice will feel comfortable diving into this discussion commentary. All Hebrew terms are defined, quoted verses contextualized, and less familiar Jewish concepts explained.

Winner of the 2003 Trillium Book Award "Stories are wondrous things," award-winning author and scholar Thomas King declares in his 2003 CBC Massey Lectures. "And they are dangerous." Beginning with a traditional Native oral story, King weaves his way through

literature and history, religion and politics, popular culture and social protest, gracefully elucidating North America's relationship with its Native peoples. Native culture has deep ties to storytelling, and yet no other North American culture has been the subject of more erroneous stories. The Indian of fact, as King says, bears little resemblance to the literary Indian, the dying Indian, the construct so powerfully and often destructively projected by White North America. With keen perception and wit, King illustrates that stories are the key to, and only hope for, human understanding. He compels us to listen well.

State Oxford University Press Robert Wuthnow has been praised as one of "the country's best social scientists" by columnist David Brooks, who hails his writing as "tremendously valuable." The New York Times calls him "temperate, balanced, compassionate," adding, "one can't but admire Mr. Wuthnow's views." A leading authority on religion, he now addresses one of the most profound subjects: the end of the world. In *Be Very Afraid*, Wuthnow examines the human response to existential threats--once a matter for theology, but now looming before us in multiple forms. Nuclear weapons, pandemics, global warming: each threatens to destroy the planet, or at least to annihilate our species. Freud, he notes, famously taught that the standard

psychological response to an overwhelming danger is denial. In fact, Wuthnow writes, the opposite is true: we seek ways of positively meeting the threat, of doing something--anything--even if it's wasteful and time-consuming. The atomic era that began with the bombing of Hiroshima sparked a flurry of activity, ranging from duck-and-cover drills, basement bomb shelters, and marches for a nuclear freeze. All were arguably ineffectual, yet each sprang from an innate desire to take action. It would be one thing if our responses were merely pointless, Wuthnow observes, but they can actually be harmful. Both the public and policymakers tend to model reactions to grave threats on how we met previous ones. The response to the terrorist attacks of 9/11, for

example, echoed the Cold War--citizens went out to buy duct tape, mimicking 1950s-era civil defense measures, and the administration launched two costly conflicts overseas. Offering insight into our responses to everything from An Inconvenient Truth to the bird and swine flu epidemics, Robert Wuthnow provides a profound new understanding of the human reaction to existential vulnerability.

A practical approach for leaders to guide their congregations to become more externally focused. *The Externally Focused Quest: Becoming the Best Church for the Community* is designed for church leaders who want to transform their churches to become less internally focused and more oriented to the world around them. The recycling and reuse of materials and objects were extensive in the past, but have rarely been embedded into models of the economy; even more rarely has any attempt been made to address the scale of these practices. Recent developments, including the use of large datasets, computational modelling, and

high-resolution analytical chemistry are increasingly offering the means to reconstruct recycling and reuse, and even to approach the thorny issue of quantification. This volume is the first to bring together these new approaches, and the first to present a consideration of recycling and reuse in the Roman economy, taking into account a range of materials and using a variety of methodological approaches. It presents integrated, cross-referential evidence for the recycling and reuse of textiles, papyrus, statuary and building materials, amphorae, metals, and glass, and examines significant questions about organization, value, and the social meaning of recycling.

In this fallen world, Christians often suffer due to no fault of their own. Imagine a loving spouse who suffers the pains of marital unfaithfulness, or loving Christian parents who suffer the loss of their child. Now, imagine that you can overcome the pain and instead experience a "joy unspeakable" (1 Pet 1:8). That is the message of this book. It teaches that to experience righteous suffering is to "fellowship with Christ in his sufferings" (1 Pet 4:13). We desire to know the glory of Christ, but that is only half of what he experienced. Unless we know Jesus' suffering, we will never know the whole Jesus. And to know Jesus is the greatest joy of a believer, a "joy unspeakable."

National Geographic Books

A brief foray into a moral thicket, exploring why we should protect nature despite tsunamis, malaria, bird flu, cancer, killer asteroids, and tofu. Most of us think that in order to be environmentalists, we have to love nature. Essentially, we should be tree huggers—embracing majestic redwoods,

mighty oaks, graceful birches, etc. We ought to eat granola, drive hybrids, cook tofu, and write our appointments in Sierra Club calendars. Nature's splendor, in other words, justifies our protection of it. But, asks Benjamin Hale in this provocative book, what about tsunamis, earthquakes, cancer, bird flu, killer asteroids? They are nature, too. For years, environmentalists have insisted that nature is fundamentally good. In *The Wild and the Wicked*, Benjamin Hale adopts the opposite position—that much of the time nature can be bad—in order to show that even if nature is cruel, we still need to be environmentally conscientious. Hale argues that environmentalists needn't feel compelled to defend the value of nature, or even to adopt the attitudes of tree-

hugging nature lovers. We can acknowledge nature's indifference and periodic hostility. Deftly weaving anecdote and philosophy, he shows that we don't need to love nature to be green. What really ought to be driving our environmentalism is our humanity, not nature's value. Hale argues that our unique burden as human beings is that we can act for reasons, good or bad. He claims that we should be environmentalists because environmentalism is right, because we humans have the capacity to be better than nature. As humans, we fail to live up to our moral potential if we act as brutally as nature. Hale argues that despite nature's indifference to the plight of humanity, humanity cannot be indifferent to the plight of nature.

Energy and the Environment John Wiley & Sons

You have been inundated with reports from media, governments, think tanks and "experts" saying that our climate is changing for the worse and it is our fault. Increases in draughts, heat waves, tornadoes and poison ivy-to name a few-are all blamed on our "sins of emission" from burning fossil fuels and increasing carbon dioxide in the atmosphere. Yet, you don't quite buy into this human-caused climate apocalypse. You aren't sure about the details because you don't have all the facts and likely aren't a scientist. Inconvenient Facts was specifically created for you. Writing in plain English and providing easily understood charts and figures, Gregory Wrightstone presents the science to

assess the basis of the threatened Thermageddon. The book's 60 "inconvenient facts" come from government sources, peer-reviewed literature or scholarly works, set forth in a way that is lucid and entertaining. The information likely will challenge your current understanding of many

apocalyptic predictions about our ever dynamic climate. You will learn that the planet is improving, not in spite of increasing CO2 and rising temperature, but because of it. The very framework of the climate-catastrophe argument will be confronted with scientific fact. Book jacket.
