*Engineering Theories of Software Intensive Systems* Erlangga

Undoubtedly one of the paragons of public international law in contemporary times, Colin Warbrick is truly held in high esteem by his peers at home and abroad. His breadth of knowledge is reflected in a large number of scholarly works and in his appointment as a Specialist Adviser to the Select Committee on the Constitution of the House of Lords and as a consultant to both the Council of Europe and OSCE. This festschrift celebrates on his retirement as Barber Professor of Jurisprudence at Birmingham University, his extraordinary talent and academic career by bringing together a group of eminent judges, practitioners and academics to write on international human rights, international criminal justice and international order and security, fields in which Professor Warbrick has left an indelible mark.

 Materials Numerical Quantities-Forms Tables Compiled For The Metal Trade Are Dedicated To Vocational Schools As Well As To Practical Usage At The Job Site. Although The Tables Have Been Compiled For Use Primarily By The Apprentice, The Specialized Worker Will Also Find Them Useful. Every Effort Has Been Made To Shorten The Sometimes Tedious Operations And The Arrangement Of Subject Matter Is Such That Its Contents Are Readily Available To The Practical Man. Much Painstaking Effort Must Go In Compiling And Arranging Such Tables. Information Must Be So Selected That The Reader Can, From The Bulk Of Material, Easily Find Out The Subject Of His Interest. Often, A Decision Of Either Selecting An Item Or Rejecting It Proves Difficult. Too Much Material Packed Into Tabular Compilations Can Be As Harmful As The Omission Of Some Vital Pieces Of Information. Not Only The Selection But Also The Arrangement Of Material Requires Considerable Thought If The Contents Of The Tabular Compilations Have To Be Offered For Ready Reference. Only Then Can The Reader Decide Where To Look For Proper Information. The Principle Of Order Must Be Evident At Once.

**Marine and Offshore Corrosion** describes the principles of effective corrosion control treatments in marine environments, with emphasis on economic solutions to corrosion. The book explains chemical or electrochemical reaction of an alloy with its environment leading to corrosion, and mechanical loss of the metal by erosion, abrasion, or wear resulting also in corrosion. A main consideration of erosion control that the engineer should look into is the economic side. Other considerations that he should investigate are the strength of a structure, time for construction, availability of materials, and costs. The book also discusses the marine environment consisting of sea water, temperature fluctuations, dissolved gases, hydrogen sulphide, ammonia, carbon dioxide, electrical conductivity, fouling. The text describes the selection of materials to be used in marine environments, surface preparation of steel before painting, the type of paint, and metallic coatings. Some of the factors in selecting coating systems are: cost and estimated life before the first scheduled maintenance, adhesion properties, moisture tolerance, elasticity, chemical resistance, impact resistance, bacterial resistance. The factors affecting maintenance include environmental conditions, quality of initial protection applied, type of structure, as well as the design and purpose of the structure. The book has been prepared for engineers and designers who are not corrosion specialists but have to deal with marine corrosion problems as part of their day-to-day professional activities. The text will also turn out to be useful for engineers with general interest in structure, building, or machinery maintenance specially those located near coastal areas.

Corrosion is a huge issue for materials, mechanical, civil and petrochemical engineers. With comprehensive coverage of the principles of corrosion engineering, this book is a one-stop text and reference for students and practicing corrosion engineers. Highly illustrated, with worked examples and definitions, it covers basic corrosion principles, and more advanced information for postgraduate students and professionals. Basic principles of electrochemistry and chemical thermodynamics are incorporated to make the book accessible for students and engineers who do not have prior knowledge of this area. Each form of corrosion covered in the book has a definition, description, mechanism, examples and preventative methods. Case histories of failure are cited for each form. End of chapter questions are accompanied by an online solutions manual. \* Comprehensively covers the principles of corrosion engineering, methods of corrosion protection and corrosion processes and control in selected engineering environments \* Structured for corrosion science and engineering classes at senior undergraduate and graduate level, and is an ideal reference that readers will want to use in their professional work \* Worked examples, extensive end of chapter exercises and accompanying online solutions and written by an expert from a key petrochemical university

Completely revised to reflect the new ACI 318-08 Building Code and International Building Code, IBC 2009, this popular book offers a unique approach to examining the design of prestressed concrete members in a logical, step-by-step trial and adjustment procedure. KEY TOPICS: Integrates handy flow charts to help readers better understand the steps needed for design and analysis. Includes a revised chapter containing the latest ACI and AASHTO Provisions on the design of post-tensioned beam end anchorage blocks using the strut-and-tie approach in conformity with ACI 318-08 Code. Offers a new complete section with two extensive design examples using the strut-and-tie approach for the design of corbels and deep beams. Features an addition to the elastic method of design, with comprehensive design examples on LRFD and Standard AASHTO designs of bridge deck members for flexure, shear and torsion, conforming to the latest AASHTO specifications. Includes a revised chapter on slender columns, including a simplified load-contour biaxial bending method which is easier to apply in design, using moments rather than loads in the reciprocal approach. MARKET: A useful construction reference for engineers.

Endapan primer dan endapan sekunder merupakan korelasi genetik yang menuntun dalam

mendeteksi sumber dan jarak terbentuknya endapan plaser. Salah satu endapan plaser paling mudah diuangkan adalah butiran emas plaser. Korelasi genetik dan nilai jual merupakan pedoman umum para penambang endapan emas plaser yang umumnya didominasi oleh para penambang tanpa izin. Sederhananya bila dijumpai butiran emas di gunung maka pasti ada pula butiran emas di sungai. Memang emas plaser sangat menjanjikan selain langsung memiliki nilai jual juga karena diperoleh dari proses pemisahan cukup sederhana dari batuan. Awalnya kegiatan penelitian eksploratif diutamakan pada endapan primer seperti hidrotermal, epitermal, porfiri dan logam dasar, ternyata banyak dijumpai indikasi endapan plaser yang belum terdeteksi secara genetik. Inilah yang menjadi alasan bagi saya mewujudkan buku ini untuk memudahkan dalam pembelajaran baik bagi kalangan mahasiswa maupun pembaca pemerhati endapan mineral.

Fans of Gaalen Foley's Inferno Club books—My Dangerous Duke, My Irresistible Earl, and My Wicked Marquess—will eagerly devour My Notorious Gentleman. Former spy and Inferno Club member Lord Trevor Montgomery is about to ace the greatest danger of all—marriage! Yes, he has every lady of the ton swooning, but he doesn't have a jot of interest in any of them, except for shy, warm-hearted Miss Grace Kenwood—the parson's daughter. She could steal his heart—if he believed he still possessed one.

From the medicine we take, the treatments we receive, the aptitude and psychometric tests given by employers, the cars we drive, the clothes we wear to even the beer we drink, statistics have given shape to the world we inhabit. For the media, statistics are routinely 'damning', 'horrifying', or, occasionally, 'encouraging'. Yet, for all their ubiquity, most of us really don't know what to make of statistics. Exploring the history, mathematics, philosophy and practical use of statistics, Eileen Magnello - accompanied by Bill Mayblin's intelligent graphic illustration - traces the rise of statistics from the ancient Babylonians, Egyptians and Chinese, to the censuses of Romans and the Greeks, and the modern emergence of the term itself in Europe. She explores the 'vital statistics' of, in particular, William Farr, and the mathematical statistics of Karl Pearson and R.A. Fisher. She even tells how knowledge of statistics can prolong one's life, as it did for evolutionary biologist Stephen Jay Gould, given eight months to live after a cancer diagnosis in 1982 - and he lived until 2002. This title offers an enjoyable, surprise-filled tour through a subject that is both fascinating and crucial to understanding our world.

Software engineering has over the years been applied in many different fields, ranging from telecommunications to embedded systems in car and aircraft industry as well as in production engineering and computer networks. Foundations in software technology lie in models allowing to capture application domains, detailed requirements, but also to understand the structure and working of software systems like software architectures and programs. These models have to be expressed in techniques based on discrete mathematics, algebra and logics. However, according to the very specific needs in applications of software technology, formal methods have to serve the needs and the quality of advanced software engineering methods, especially taking into account security aspects in Information Technology. This book presents mathematical foundations of software engineering and state-of-the-art engineering methods in their theoretical substance in the step towards practical applications to examine software engineering techniques and foundations used for industrial tasks. The contributions in this volume emerged from lectures of the 25th International Summer School on Engineering Theories of Software Intensive Systems, held at Marktoberdorf, Germany from August 3 to August 15, 2004.
