This collection sets out to analyze the influence of women's movements on the emergence of Europe's welfare state from the 1880s to the 1950s, and the limits of that influence. It compares the women's movements - and social policies concerning women - in the dictatorships of Italy, Germany and Spain with the democracies in Britain, France and Scandinavia. It throws new lights on feminism, especially in the inter-war period.

The eight essays collected in this volume examine the practice of gender history and its impact on our understanding of European history. Each essay takes up a major methodological or theoretical issue in feminist history and illustrates the necessity of critiquing and redefining the concepts of body, citizenship, class, and experience through historical case studies. Kathleen Canning opens the book with a new overview of the state of the art in European gender history. She considers how gender history has revised the master narratives in some fields within modern European history (such as the French Revolution) but has had a lesser impact in others (Weimar and Nazi Germany). *Gender History in Practice* includes two essays now regarded as classics? "Feminist History after the 'Linguistic Turn'" and "The Body as Method"--as well as new chapters on experience, citizenship, and subjectivity. Other essays in the book draw on

Canning's work at the intersection of labor history, the history of the welfare state, and the history of the body, showing how the gendered "social body" was shaped in Imperial Germany. The book concludes with a pair of essays on the concepts of class and citizenship in German history, offering critical perspectives on feminist understandings of citizenship. Featuring an extensive thematic bibliography of influential works in gender history and theory that will prove invaluable to students and scholars, *Gender History in Practice* offers new insights into the history of Germany and Central Europe as well as a timely assessment of gender history's accomplishments and challenges.

Although women were called the 'pious sex' much earlier, it was during the nineteenth century, when the differences between men and women were being made more explicit, that an intense bond between women and religion was developed. Religiosity was thought to be a 'natural' part of femininity and turned religious masculinity into an oddity. This clear-cut gender ideology, however, remains an ideology (prescribed and contested) that needs to be put in the perspective of its context of origin, the bourgeois milieu. How were these gender identities constructed and by whom? With this volume Van Osselaer seeks to clarify how the gender differentiation was created among Belgian Catholics. She brings to light the extent to which religiosity was inscribed in these constructions and how religious teachings contributed to it. It is clear that the limitations of the 'feminization' thesis, a master narrative that has strongly contributed to the introduction of women in religious history,

have gradually become more visible. Documenting pastoral care, the devotion to the Sacred Heart of Jesus and Catholic Action, The Pious Sex offers critical commentaries on the master narratives, suggesting that even men could belong to a 'pious sex'.
