LANE BAILEY

Portuguese, Brazilian, and African Studies

Walter de Gruyter
 Is there anything more entertaining, inspiring and instructive than observing art? Yes, it is watching the people interacting with this art. This book may forever change your approach to art as it urges you to always consider both the work and the response. Because ultimately artists create, but we - the audience - complete the picture. A Spectator is an Artist Too is a visual essay about human behaviour around art: what happens when we are confronted with something immensely beautiful, challenging, or puzzling? Art historians only study objects, but how these objects are received is also worthy of our

attention. The book also captures how art museums are changing, as they draw increasingly diverse audiences. The way the museum visitors responds to art is becoming more casual and creative - but also more swift or even banal. This shift is increased by a whole new breed of Instagram-friendly 'museums' worldwide, attracting experience-hungry visitors with immersive exhibitions defined by their Instagrammability.

Desire in the Renaissance John Wiley & Sons

Nomenclature is an essential part of any academic discipline but in chemistry it assumes a particular significance. The nomenclature of chemical compounds is systematic: names and formulae are constructed from units manipulated to provide information on composition and structure. To understand chemistry, students must have a firm grasp of the

principles of its nomenclature. Without this they are lost. Principles of Chemical"

Tense Systems in European Languages II Princeton University Press

Basic concepts of fluids and fluid flow are essential in all engineering disciplines to get better understanding of the courses in the professional programmes, and obviously its importance as a core subject need not be overemphasised.

Tragedy, Enlightenment and the Figure of Woman in Classical German Drama Routledge

The essays collected in this volume, most previously unpublished, address a number of closely interconnected issues raised by the comparative syntax of functional heads within the Principles-and-Parameters approach. The general theory of head movement, the properties of derived structures created by incorporation, and the parameterization

involved are the main theoretical foci. One major empirical area which is addressed concerns head movement in configurations involving certain kinds of operator-like elements, for example, the different manifestations of Verb Second phenomena in Wh and other constructions and the syntax of negative heads and specifiers. In addition, properties of functional heads and head movement in nominal and clausal structures and the causative construction are investigated.

The Syntax of the Celtic Languages
A&C Black

"Over the past several years, a series of extraordinary cutting edge developments have taken place in Golden Age Spanish studies. Important new issues have been addressed--and conceived--in innovative ways: questions of gender and sexuality; concepts of self and other; political and social contexts of literary production and reception. While these investigations have already begun to have a significant impact on our current reconceptualization of culture in general and Spanish culture in particular, they have until now been somewhat overly dispersed, even fragmented--in large part because of their very nature as rethinkings, as experimental. The present volume constitutes a collective examination of these kinds of key cultural issues within the historically specific context of Golden Age Spain, configured around the central question of authority."--Marina S. Brownlee, from the Preface. In a wide-ranging series of essays, the contributors to this volume bring recent critical and theoretical perspectives to bear on our understanding of culture in Golden Age Spain, focusing on the related notions of authority, authorship, selfhood, and tradition in Spanish culture. This book will appeal to Hispanists and comparatists interested in contemporary perspectives on the literature and culture of medieval and Renaissance Spain as well as to medievalists and Renaissance specialists interested in Spanish literature.

Contributors: La Schwartz Lerner, Jos Regueiro, Edward H. Friedman, Mary Malcolm Gaylord, Marina S. Brownlee, Paul Julian Smith, Harry Sieber, Robert ter Horst, Ruth El Saffar, Anthony J. Cascardi, Diana de Armas Wilson, Walter Cohen, Joan Ramn Resina, Hans Ulrich Gumbrecht.

2nd International Students Science Congress Proceedings Wiley-Blackwell

Over the past few decades, the book series *Linguistische Arbeiten* [Linguistic Studies], comprising over 500 volumes, has made a significant contribution to the development of linguistic theory both in Germany and internationally. The series

will continue to deliver new impulses for research and maintain the central insight of linguistics that progress can only be made in acquiring new knowledge about human languages both synchronically and diachronically by closely combining empirical and theoretical analyses. To this end, we invite submission of high-quality linguistic studies from all the central areas of general linguistics and the linguistics of individual languages which address topical questions, discuss new data and advance the development of linguistic theory.

Biofuel is a renewable energy source produced from natural materials. The benefits of biofuels over traditional petroleum fuels include greater energy security, reduced environmental impact, foreign exchange savings, and socioeconomic issues related to the rural sector. The most common biofuels are produced from classic food crops that require high-quality agricultural land for growth. However, bioethanol can be produced from plentiful, domestic, cellulosic biomass resources such as herbaceous and woody plants, agricultural and forestry residues, and a large portion of municipal and industrial solid waste streams. There is also a growing interest in the use of vegetable oils for making biodiesel. "Biofuels: Securing the Planet's Future Energy Needs" discusses the production of transportation fuels from biomass (such as wood, straw and even household waste) by Fischer-Tropsch synthesis. The book is an important text for students and researchers in energy engineering, as well as professional fuel engineers.

A wide range of French women writers are surveyed, including Sand, Colette, Beauvoir and Duras among the

"canonized", and many marginalized or forgotten and contemporary names not yet widely known outside France. These writers are seen within the political, economic and cultural context of women's lives and how these have changed across a century-and-a-half. Underpinning the whole account is the relationship between gender and language, between politics sexual and textual.

Knowledge, Science, and Literature in Early Modern Germany Rodopi

The women who spoke or wrote in the margins of the Middle Ages—women who were oppressed and diminished by social and religious institutions—often were not literate. Or, if they could read, they did not know how to write. Transforming or subverting Western and patristic traditions associated with the clergy, they also turned to Eastern and North African traditions and to popular oral theater, and focused in their choice of genre on lyric, romance, and confessional autobiography. These essays analyze their texts and reconstruct a medieval feminine aesthetic that begins a rewriting of cultural and literary history.

Outing Goethe & His Age Oxford University Press

Analogon Rationis is a series of comparative literature essays, in English and German, collected in honour of Professor Gerwin Marahrens, a well-loved scholar in Germanic Languages.

Studies Presented to Clive Willis on His Retirement Liverpool University Press

As the third book in the series from the Institute's Muslim World Initiative on pivotal states in the Muslim world, this lucid and timely volume sheds much-needed light on Iran's strikingly complex political system and foreign policy and its central role in the region.

Festschrift für Gerwin Marahrens zum 65. Geburtstag Council on Foreign Relations Press

A comprehensive and revealing account of the ongoing struggles and instability of India's political and economic institutions India's ascent as a formidable power on the world stage and its geopolitical ramifications have received much attention in recent years. This comprehensive study by Sumit Ganguly and William Thompson, two highly distinguished scholars of political science and international relations, delves into the intricate inner workings of this great Asian nation to reveal an Indian state struggling to maintain national security, domestic order, and steady fiscal growth despite weaknesses in its economic and political institutions. The authors sobering account questions India's perceived strengths and

domestic and foreign policy initiatives, while focusing on the South Asian giant's infrastructural and economic growth problems, opposition to reform, and other important hurdles the nation has faced and will continue to face over the coming decade and beyond.

Tristan and Isolde Infinite Study
Evolutionary algorithms, such as evolution strategies, genetic algorithms, or evolutionary programming, have found broad acceptance in the last ten years. In contrast to its broad propagation, theoretical analysis in this subject has not progressed as much. This monograph provides the framework and the first steps toward the theoretical analysis of Evolution Strategies (ES). The main emphasis is deriving a qualitative understanding of why and how these ES algorithms work.

Literature, Culture, Theory Fairleigh Dickinson Univ Press

Drawing on a variety of psychoanalytic approaches, ten critics engage in exciting discussions of the ways the "inner life" is depicted in the Renaissance and the ways it is shown to interact with the "external" social and economic spheres. Spurred by the rise of capitalism and the nuclear family, Renaissance anxieties over changes in identity emerged in the period's unconscious--or, as Freud would have it, in its literature. Hence, much of Renaissance literature represents themes that have been prominent in the discourse of psychoanalysis: mistaken identity, incest, voyeurism, mourning, and the uncanny. The essays in this volume range from Spenser and Milton to Machiavelli and Ariosto, and focus on the fluidity of gender, the economics of sexual and sibling rivalry, the power of the visual, and the cultural echoes of the uncanny. The discussion of each topic highlights language as the medium of desire, transgression, or oppression. The section "Faking It: Sex, Class, and Gender Mobility" contains essays by Marjorie Garber (Middleton), Natasha Korda (Castiglione), and Valeria Finucci (Ariosto). The contributors to "Ogling: The Circulation of Power" include Harry Berger (Spenser), Lynn Enterline (Petrarch), and Regina Schwartz (Milton). "Loving and Loathing: The Economics of Subjection" includes Juliana Schiesari (Machia-velli) and William Kerrigan (Shakespeare). "Dreaming On: Uncanny Encounters" contains essays by Elizabeth J. Bellamy (Tasso) and David Lee Miller (Jonson).

A Casebook Wipf and Stock Publishers
Focusing on knowledge, science and

literature in early modern Germany, this collection presents 12 essays on emerging epistemologies regarding: the transcendent nature of the Divine; the natural world; the body; sexuality; intellectual property; aesthetics; demons; and witches.

Lactobacillus Molecular Biology Oxford University Press on Demand

Leading researchers examine the Celtic languages in comparative perspective, making reference to European and Arabic languages; they use the insights of principles-and-parameters theory. A substantial introduction makes the volume accessible to theoreticians unfamiliar with the Celtic languages and to specialists. The book makes a strong contribution to linguistic theory and to our understanding of the Celtic languages.

Ascending India and Its State Capacity 2nd International Students Science Congress Proceedings

The aim of this study is to determine PstI polymorphism in the exon 6 region of the Pituitary-specific Transcription Factor (Pit-1) gene which is regarded as a candidate gene in mammals in regulating growth and development in 6 different goat breeds reared in Turkey. PstI polymorphism in Pit-1 gene (450 bp) was investigated by Restriction Fragment Length Polymorphism (RFLP) method in a total of 217 goats including 36 Hair, 18 Angora, 43 Kilis, 37 Honamli, 46 Halep and 37 heads of Saanen breeds.

Compendium of Chemical Terminology Prentice Hall

When Goethe christened the 1700's "the Century of Winckelmann" and Kant dubbed it "the Century of Frederick the Great," they invoked two notorious figures in gay history. This collection of twelve essays reclaims "the Age of Goethe"□To call upon a literary designation of roughly the same period - as a time when same-sex erotic attraction suffused artistic production from Winckelmann's art treatises and Goethe's plays to Friedrich Schlegel's self-reflexive novel *Lucinde* and Kleist's letters. This volume employs historical, biographical, and textual evidence to paint a cohesive picture of the incontrovertibly sexual nature of male-male and female-female relationships in late-eighteenth- and early-nineteenth-century Germany. The literature of this era bequeathed to us the cultural inventions of Romantic love, classical femininity, the marriage partnership, and the aesthetics of beauty - all, as this volume demonstrates, via and despite the ever-resurgent erotic desire for one's own sex.

In the process, it offers radically new readings of canonical authors - including Wieland, Lenz, Goethe, Friedrich Schlegel, and Kleist □ in light of the eroticized same-sex relations in their works.

The Theory of Evolution Strategies Yale University Press

Supramolecular chemistry is 'chemistry beyond the molecule' - the chemistry of molecular assemblies and intermolecular bonds. It is one of today's fastest growing disciplines, crossing a range of subjects from biological chemistry to materials science; and from synthesis to spectroscopy. Supramolecular Chemistry is an up-to-date, integrated textbook that tells the newcomer to the field everything they need to know to get started.

Assuming little in the way of prior knowledge, the book covers the concepts behind the subject, its breadth, applications and the latest contemporary thinking in the area. It also includes coverage of the more important experimental and instrumental techniques needed by supramolecular chemists. The book has been thoroughly updated for this second edition. In addition to the strengths of the very popular first edition, this comprehensive new version expands coverage into a broad range of emerging areas. Clear explanations of both fundamental and nascent concepts are supplemented by up-to-date coverage of exciting emerging trends in the literature. Numerous examples and problems are included throughout the book. A system of "key references" allows rapid access to the secondary literature, and of course comprehensive primary literature citations are provided. A selection of the topics covered is listed below. Cation, anion, ion-pair and molecular host-guest chemistry Crystal engineering Topological entanglement Clathrates Self-assembly Molecular devices Dendrimers Supramolecular polymers Microfabrication Nanoparticles Chemical emergence Metal-organic frameworks Gels Ionic liquids Supramolecular catalysis Molecular electronics Polymorphism Gas sorption Anion-pinteractions Nanochemistry Supramolecular Chemistry is a must for both students new to the field and for experienced researchers wanting to explore the origins and wider context of their work. Review: "At just under 1000 pages, the second edition of Steed and Atwood's Supramolecular Chemistry is the most comprehensive overview of the area available in textbook form...highly recommended." —Chemistry World, August 2009
