In 1962, a unique transport aircraft was built from the parts of 27 Boeing B-377 airliners to provide NASA a means of transporting rocket boosters. With an interior the size of a gymnasium, "The Pregnant Guppy" was the first of six enormous cargo planes built by Aero Spacelines and two built by Union de Transport Aeriens. More than half a century later, the last Super Guppy is still in active service with NASA and the design concept has been applied to next-generation transports. This comprehensive history of expanded fuselage aircraft begins in the 1940s with the military's need for a long-range transport. The author examines the development of competing designs by Boeing, Convair and Douglas, and the many challenges and catastrophic failures. Behind-the-scenes maneuvers of financiers, corporate raiders, mobsters and other nefarious characters provide an inside look at aviation development from the drawing board to the scrap yard.

The Consolidated B-24 Liberator first saw combat in June of 1942, making a daring raid into Nazi-occupied Romania to bomb the oil fields at Ploesti. Nearly 18,500 Liberators were built during the war years, making it by far the most-produced American combat aircraft. It served in many roles beyond heavy bomber, transport, and anti-submarine patrol, and flew in Africa, Europe, India, the Atlantic, India and the Pacific

Theatre. Originally printed by the United States Army Air Force in 1942, the B-24 Liberator Pilot's Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Originally classified "Restricted," the manual was declassified long ago and is here reprinted in book form. This affordable facsimile has been reformatted, and color images appear as black and white. Care has been taken however to preserve the integrity of the text.

 International Aviation Law: A Practical Guide explains the international context and application of the law as it applies to commercial and recreational aviation, and to the broader aviation environment. It provides a comprehensive introduction to all aspects of aviation law, from

criminal law to contract law, to the legal duties and responsibility of aircrew and other aviation personnel including airport operators, air traffic controllers and aircraft engineers. Each area of the law is clearly explained in accessible language and supported with practical case studies to illustrate the application of the law within an operational aviation context. It also provides advice on how to avoid or minimize legal liability for those working in the aviation industry. Thoroughly revised and updated throughout, this second edition adds new material on subjects such as unmanned aircraft systems, ASEAN's

Single Aviation Market, common rules on compensation and assistance to passengers, and a discussion on the impact of Brexit to the UK's aviation market and legal status.
