Second Edition Springer

This edited volume documents the state of the art in research into how the age factor interacts with other factors in a variety of educational contexts. The book comprises 17 chapters examining early language learning and teaching in a range of countries in Europe, Asia and North America. Authors discuss main themes in research methodology, curricular and assessment issues, short- and long-term outcomes, the role of individual differences, innovation in teacher education, classroom processes, as well as the impact of the target language. The first two chapters (Nikolov; Edelenbos and Kubanek) overview the main trends in research. Four papers (Curtain; Ofra Inbar-Lourie and Elana Shohamy; Jalkannen; Haenni Hoti, Heinzmann, and Müller) focus on the assessment of young learners; two authors examine how age impacts on language learning over time (Muñoz; Kasai). Individual differences (motivation, anxiety, aptitude, and socio-economic status) are explored by Mihaljević, Djigunović, Mattheoudakis and Alexiou, and Kiss. Innovation is the common theme

in chapters written by Wang, Moon, and Peng and Zhang. The last three papers analyze the status of languages (Harris, Enever, Carmel). The book is a must have for teacher educators of pre- and in-service teachers of modern languages to young learners, MA and PhD students in TEFL/TESOL and other languages, researchers and policy makers.

Using data from a long-term ethnographic study of English language classrooms in a South African township, this book highlights linguistic expertise in a setting where it is not usually expected or sought. Rather than being 'peripheral and unskilled', South African township teachers and learners emerge as skilled (re)language users central to the workings of South African education, and to our understanding of how language classrooms work. This book foregrounds the heterogeneity, flexibility and creativity of day-to-day language practices that African urban spaces are known for, and conceptualises language teaching not as a progression from one fixed language to another, but as a circular sorting process between linguistic heterogeneity (languageing) and homogeneity (a standard language).

Over recent years the field of Science of Learning has increased dramatically. Unfortunately, despite claims that this work will greatly impact education, very little research makes it into teacher practice. Although the reasons for this are varied, a primary concern is the lack of a proper translation framework. From the Laboratory to the Classroom aims to consolidate information from many different research disciplines and correlate learning principles with known classroom practices in order to establish explanatory foundations for successful strategies that

can be implemented into the classroom. It combines theoretical research with the diverse and dynamic classroom environment to deliver original, effective and specific teaching and learning strategies and address questions concerning what possible mechanisms are at play as people learn. Divided into five sections, chapters cover: A Framework for Organizing and Translating Science of Learning Research Motivation and

Attention as Foundations for Student Learning Memory and Metamemory Considerations in the Instruction of Human Beings Science of Learning in Digital Learning Environments Educational Approaches for Students Experiencing Learning Difficulties and Developmental Characteristics of Gifted Children Brain, Behaviour and Classroom Practice Forging Research/Practice Relationships via Laboratory Schools This fascinating text gathers an international team of expert

scientists, teachers, and administrators to present a coherent framework for the vital translation of laboratory research for educational practice. Applying the Science of Learning framework to a number of different educational domains, it will be an essential guide for any student or researcher in education, educational psychology, neuropsychology, educational technology and the emergent field of neuroeducation.
