If you think that making a guitar is impossible, then this book is for you. The only one of its' kind, this book will teach you how to make a laminated archtop guitar. It can be done in a relatively small space and does not require many tools or expensive machinery, just a desire to do it. The book came about as the result of a suggestion and urging of my friend, Bob Benedetto. Because no other book is available for this type on construction, it is written in an easy to understand format and is priced so that almost anyone can afford it. It contains drawings and pictures with step by step easy to follow instructions so as to eliminate any guesswork. This book took four years to complete and is designed to help someone who wants to make this kind of guitar. It should serve as an excellent guide.

"Renowned luthier John S. Bogdanovich crafted the project shown inside for his own personal use. The design he presents is simple but elegant and is a composite of ideas borrowed from several different guitars admired for their tonal qualities and aesthetic details. In close-up photographs Bogdanovich invites you to stand by his side and follow the entire process from start to finish. He offers guidance through every step, and explains every decision, from the arrangement of his workbench and the selection of the wood, to tuning and setting up the instrument. Bogdanovich also provides a choice of alternative methods and materials -- to help you find your own style of working, and to enable you to add your personal touches to your project. By the time your instrument is finished, you'll have acquired a world of knowledge, from the difference between quartersawn and flat-sawn wood to the pros and cons of lacquer versus French polish. You'll have mastered dozens of skills, including bending and laminating wood and cutting and seating wire frets. The dictionary intends to provide conventional spelling and short descriptions of the most common terms used in modern lutherie (construction of stringed musical instruments) as well as historical terminology that a modern

luthier may come across in plans and other media. Luthiers, musicians, and others that read or write about stringed musical instrument construction should find it useful. Lutherie beginners who are attempting to navigate a mass of unfamiliar terminology will find the dictionary particularly useful. Use of the dictionary will increase the rate of understanding for the new luthier. As with any such work appearing in book form there is a trade off between completeness and accessibility. Although it certainly is possible to include a lot more terms than currently appear, doing so would make for a larger and more expensive book and it would make looking up terms more time consuming. The number of terms presented offer a good balance.

**Birds of Fire** Duke University Press  
This method book is designed to help intermediate to advanced jazz students incorporate classic jazz vocabulary into their original improvisations. Using a series of standard and modern chord progressions, guitarist Davy Mooney provides several short passages that are meant to be played exactly as written within an otherwise improvised solo; students are expected to adapt this written material to their own purposes by improvising into and out of it. In an effort to overcome the disconnect between developing a unique sound and learning the language of past jazz masters, the author eloquently analyzes several phrases and chord changes and comments on various aspects of improvisation, referencing the styles and specific recordings of many outstanding jazz artists. This is the method that Mooney used as a student to personalize his own jazz vocabulary and learn to express himself within the context of the jazz tradition. Mooney proves he has

both the vocabulary and the chops to deliver generously repeated guitar/bass/drums backup tracks for student use; he then demonstrates the method by providing transcriptions of his own improvisations, incorporating the same phrases and chord progressions required of the student. The firm message conveyed by this book is that, "you can do it too." Written in standard notation only. Includes access to online audio.

**Making Master Guitars** Rowdy Rhodes  
Contemporary Acoustic Guitar Design and Build is for everyone who wants to understand more about designing and building acoustic guitars using methods based on the acoustical and engineering sciences and contemporary small workshop practices. For the first time, the sound output of a guitar is comprehensively related both theoretically and practically to the instrument's woodwork, providing a logical and scientific method for designing guitars and real answers to questions that have challenged luthiers for centuries. Instruments built using these techniques are measurably more powerful, in-tune, responsive and playable than just about anything for sale in a music store. The differences are immediately audible. First time builders and experts alike will find these volumes invaluable. Building instructions and full sized plans are provided for four different types of guitar. But the real purpose of these volumes is to provide a design and build methodology that will allow the reader to construct just about any type of flat top guitar; the "perfect guitar" for yourself or your customer, using the same techniques that provide the quality and consistency required by pragmatic luthiers who make guitars for a living.

Birds of Firebrings overdue critical attention to fusion, the musical idiom that emerged in the late 1960s and 1970s, as musicians blended elements of jazz, rock, and funk. Fusion never coalesced into a distinct genre; many artists and critics disparaged the music as amorphous and hard to define. Kevin Fellezs contends that fusion's much-derided hybridity was its very reason for being. By mixing different musical and cultural traditions, fusion artists sought to disrupt generic boundaries, cultural hierarchies, and critical assumptions. Fellezs develops his argument through rigorous analysis of the music of four distinctive fusion artists. Interpreting the work of Tony Williams, John McLaughlin, Joni Mitchell, and Herbie Hancock, he explores the challenges that fusion

posed to generic conventions and considers the extent to which a musician can be taken seriously as an artist across divergent musical traditions. Fellezs concludes Birds of Fire with a look

at the current activities of McLaughlin, Mitchell and Hancock; Williams's final recordings; and the legacy of the fusion made by the four artists in the 1970s.
