The Story of Apollo 11 Quercus

Forty years ago, Buzz Aldrin became the second human - minutes after Neil Armstrong - to set foot on a celestial body other than the Earth. The event remains one of mankind's greatest achievements and was witnessed by the largest worldwide television audience in history. In the years since, millions more have had their earth-centric perspective changed forever by gazing at the iconic photograph of Aldrin standing on the surface of the Moon with the blackness of space behind him. He described what he saw as 'magnificent desolation'. The flight of Apollo 11 made Aldrin one of the most famous people on the planet, yet few people know the rest of the story. In *Magnificent Desolation*, Aldrin not only gives us a harrowing first-person account of the lunar landing that came within seconds of failure, as well as the ultimate insider's view of life as one of the superstars of America's space program, he also opens up with remarkable candor about his more personal trials - and eventual triumphs - back on Earth. From the glory of being part of the mission that fulfilled President Kennedy's challenge to reach the Moon before the decade was out, Aldrin returned home to an Air Force career stripped of purpose or direction, other than as a public relations tool that NASA put to relentless use in a seemingly nonstop world tour. The twin demons of depression and alcoholism emerged - the first of which Aldrin confronted early and publicly and the second of which he met with denial until it nearly killed him. As an adventure story, a searing memoir of self-destruction and self-renewal, and as a visionary rallying cry to

once again set our course for Mars and beyond, *Magnificent Desolation* is the thoroughly human story of a genuine hero.

Neil Armstrong in His Own Words Sterling Publishing Company, Inc.

This Apollo 11 50th Anniversary 1969 Lunar Moon Landing celebrates a major milestone for mankind. The first lunar landing and the first man to walk on the moon. All fans of space exploration and 1969 will enjoy this vintage Retro graphic notebook design to jot down memos, notes, or to keep a diary. 6"x9" 110 Ruled Pages. Soft Cover. Matte Finish. Great Gift Idea For Christmas or Birthday.

Reliving the Great Space Race Gareth Stevens Publishing LLLP

It's 1969 and the United States is about to begin an adventure that mankind has dreamed of since the beginning of time — a trip to the moon. In a day-by-day, minute-by-minute countdown — in the control room and up in space — you'll experience the thrill of this breathtaking "One small step for man, one giant leap for mankind!" Countdown to the Moon is a companion to Steve Englehart's award-winning story of the Wright Brothers, Countdown to Flight. Together, these two Countdowns chronicle the liftoff and apex of mankind's eternal quest to leave the earth behind.

The Incredible Story of the Race to the Moon Scientific American / Farrar, Straus and Giroux

A colorfully illustrated, pocket-size picture book biography of the first man to walk on the moon, astronaut Neil Armstrong. Neil Armstrong is an American astronaut most famous for being the first person to walk on the moon: "One small step for man, one giant leap for mankind." Before enrolling in the NASA Astronaut Corps in 1962, Armstrong was an officer in the U.S. Navy and served in the Korean War. Follow this extraordinary man's life and accomplishments, from childhood to space and back again. Pocket Bios are full of personality, introducing readers to fascinating figures

from history with simple storytelling and cheerful illustrations. Titles include men and women from history, exploration, the sciences, the arts, the ancient world, and more.

One Small Step? Time Home Entertainment

An introduction to the life of astronaut Neil Armstrong, who was the first man to walk on the moon.

Pocket Bios: Neil Armstrong Simon & Schuster

A beautiful lined journal to commemorate the first moon landing. The Apollo 11 mission was the successful realization of JFK's publicly stated goal, in May 1961, of landing a man on the moon and returning him safely to the Earth. And on July 20, 1969 American astronaut, Neil Armstrong, proclaims: "That's one small step for a man, one giant leap for mankind."

Young Pilot Createspace Independent Publishing Platform

First Man on the Moon: His Life and Legacy "That's one small step for a man, one giant leap for mankind." When Neil Armstrong placed his booted foot on the lunar surface, he took what was already conceived as a transcendent moment in a tumultuous time and, unbelievably, he elevated it. He wasn't just an astronaut, and it wasn't just about science, the space race with the Russians, or any other one thing. It was about possibility, and joy. Neil Armstrong, the new special edition from the editors of LIFE, tells the story of a legendary pilot that risked everything, alongside a brave team of astronauts and NASA engineers, to achieve the impossible. You'll learn all about the space race, and how Houston's finest made good on President John F. Kennedy's promise to reach the moon by the end of the 1960s. About the immense sacrifices-both in time spent and lives lost-the number of missions, and the number of failures before the ultimate success of the Apollo 11 landing. Plus: TIME senior writer Jeffrey Kluger stops by to regale us with a tale of the time he spent with Armstrong, and we take a peek behind the curtain at the new Oscar-nominated film based on the American hero's life, First Man. LIFE's Neil Armstrong is a must-have for the adventurer in your life, and a totemic reminder that when we put our minds to it, anything is possible.

One Giant Leap Chosen Books

*Includes pictures *Includes a bibliography for further reading "I guess we all like to be recognized not for one piece of fireworks, but for the ledger of our daily work." - Neil Armstrong "Some things just can't be described. And stepping onto the moon was one of them." - Buzz Aldrin At 9:32 a.m. on July 16, 1969, time stood still throughout the world, as thousands converged on the Kennedy Space Center and millions tuned in on live television. At that instant, the first rumbles began to shake the ground, as a small spacecraft attached to the giant Saturn V rocket several hundred feet tall started lifting off. Quickly being propelled several thousand miles per hour, it takes just a few minutes to reach a speed of 15,000 miles per hour, and just a few more minutes to enter orbit at 18,000 miles per hour. Apollo 11 was on its way to a historic first landing on the Moon. Apollo 11's trip to the Moon may have started on that day in 1969, but the journey had begun over a decade earlier as part of the Space Race between the United States and the Soviet Union. While landing on the Moon was a noble goal proposed as early as 1961 by President Kennedy, NASA and the nation as a whole moved with urgency simply to best the Soviet Union, which had spent the 1950s beating America to important space-related firsts, including launching the first satellite and cosmonaut in orbit. In fact, President Eisenhower's administration began the design for the Apollo program in 1960 in hopes of getting a head start to the Moon, despite the fact the plans originated a year before the first Russian cosmonaut, Yuri Gagarin, orbited the Earth and two years before John Glenn did. Over the decade, NASA would spend tens of billions on the Apollo missions, the most expensive peacetime program in American history to that point, and even though Apollo 11 was only one of almost 20 Apollo missions, it was certainly the crown jewel. Only one of nearly 20 Apollo missions conducted by NASA. And to make Apollo 11 a success, it would take nearly a decade of planning by government officials, hard work by NASA scientists, intense training by the astronauts, and several missions preceding Apollo 11. It also cost over \$20 billion, making the Apollo program the most expensive peacetime program in American history at the time. When the Apollo program reached its pinnacle, the man at the center of it was Neil Armstrong, a farm boy and pilot who rose from a hardworking rural home to become the first to set foot on the Moon and utter one of the 20th century's most famous phrases: "That's one small step for man, one giant leap for mankind." Armstrong did so through education, first in high school and later at Purdue University, a lot of hard work as a pilot during and after the Korean War, and some luck, coming of age at a moment when the Space Race was in full effect. After reaching the peak of his fame and career at the young age of 40, Armstrong spent the second half of his life as he had the first, working hard and serving his country. In doing so, he serves as one of the best examples of national pride and service that America has ever known. Alongside him was Buzz Aldrin, which was somewhat fitting given his family's past. His father was a military test pilot, and Aldrin would follow a similar path on his way to becoming a member of the Gemini program and ultimately the Apollo 11 mission. Despite reaching the peak of his fame and career before the age of 40, Aldrin has continued to work in the field and has been one of the most effective advocates of further space travel, particularly to Mars. Neil Armstrong and Buzz Aldrin: The Lives and Careers of the First Men on the Moon profiles both astronauts and the most memorable space mission in history. Along with pictures of important people, places, and events, you will learn about Neil Armstrong and Buzz Aldrin like never before.

Only one of nearly 20 Apollo missions conducted by NASA. And to make Apollo 11 a success, it would take nearly a decade of planning by government officials, hard work by NASA scientists, intense training by the astronauts, and several missions preceding Apollo 11. It also cost over \$20 billion, making the Apollo program the most expensive peacetime program in American history at the time. Americans sure felt the cost was worth it as they watched the first live shots of astronauts Neil Armstrong and Buzz Aldrin walking on the Moon. As he left his first footprint on the Moon, Armstrong transmitted one of the 20th century's most famous phrases: "That's one small step for man, one giant leap for mankind." Apollo 11: The History and Legacy of the First Moon Landing comprehensively chronicles the history of the famous mission, from the initial designs to the dramatic days of July 1969 and the aftermath. Along with pictures of important people, places, and events, you will learn about the first moon landing like you never have before, in no time at all.

Neil Armstrong Chartwell Books

Forty years ago, Neil Armstrong to be the first and Buzz Aldrin were the first humans to both land and walk on the Moon. This was a defining moment in history and aptly described by Commander Armstrong as One Small Step for Man, One Giant Leap for Mankind, clearly defining the magnitude of this achievement. But even more importantly, this was a defining moment for the United States, who had beaten the then Soviet Union to the Moon, thereby winning the Space Race, which was such a dominant theme of that time. This 40th anniversary book sanctioned by NASA can serve a number of other purposes. It can remind all of us what we were capable of doing and can still do; it highlights the many individuals who were involved in making it happen; and it can be a salute to all the other astronauts involved in the overall Apollo project and its many successes. Foreword by Dr. Buzz Aldrin. It's important that we reflect upon and celebrate our experiences, to learn from them and to push for more small steps and giant leaps. "One Small Step" commemorates the 40th Anniversary of the Apollo 11 Moon Landing and all of those individuals who helped make it a success. It inspires us to keep dreaming and reaching while saluting the mission and those who made it happen. I hope you enjoy it as much as I do and that it will rouse you to take at least one small step of your own.

One Moon Rock's Journey Through Time and Space Arcturus Publishing

On July 20, 1969 the whole world stopped. It was a day in which a man who grew up on a farm without electricity would announce, "One small step for man, one giant leap for mankind." In this, the first ever biography of Neil Armstrong, Leon Wagener explores the man whose walk on the moon is still compared to humankind's progenitor's crawl out of the primordial ooze. And whose retreat back to a farm in his native Ohio soon after the last ticker tape confetti fell, has left him looked upon as a reclusive hermit ever since. This is the true story of a national hero, whose life long quest to walk on the moon truly mirrors our best selves, an American who braved incredible danger daily over a long career, finally achieving what seemed impossible, and broke free of the Earth's surly bonds proving forever that man can reach for the stars, and succeed. Relying on hundreds of interviews with family and friends of the astronaut, plus generous access to the NASA files, Leon Wagener explores the life of one of America's true heroes, in a book filled with extraordinary adventure, and even greater achievement. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

One Giant Leap OUP Us

Neil Armstrong, the first person to step on the moon, uttered the legendary statement: "That's one small step for a man, one giant leap for mankind." This thrilling book explains how a young boy from Ohio became arguably the most famous astronaut of all time. A pilot by the time he was 16, Armstrong served in the Korean War before joining the US space program. Readers will learn the amazing story of the journey to the moon and gain an understanding of how perilous that mission really was. Armstrong's interviews, writings, and other insights are interspersed throughout this must-read volume.

Neil Armstrong and Buzz Aldrin One Small StepCelebrating the First Men On the Moon

Can ordinary people make a lasting impact on the world around them? Matthew Barnett's answer is an emphatic Yes! In One Small Step, he shows that it is not as daunting as one might think. It all starts with a heart that is open to the leading of the Holy Spirit and a willingness to do as he leads. These small steps--most often very simple acts that can be done on a daily basis--require only our obedience and follow-through. With inspiring stories and biblical takeaways, bestselling author Matthew Barnett calls readers to set aside their fears and boldly embrace the life-changing adventure of becoming the hands and feet of Jesus to the broken people right outside their front doors. You will soon discover that "random acts of kindness" are not so random after all.

The Apollo Moon Landings and American Culture Simon and Schuster

This fluidly written first book uses Americans' reactions to the Apollo moon landings to examine cultural and social trends in the 1960s and 70s.

Small Steps, Giant Leaps Puffin Books

Few events have matched the landing of the first man on the Moon for drama and excitement. Watched live on television by 600 million people, Neil Armstrong floated down from the final step of the Eagle's ladder onto the powdery surface of the Moon, uttering the famous line, "That's one small step for man, one giant leap for mankind." The Apollo Missions relives the experience and all the drama as it unfolded, from the birth of the Apollo space programme and the very first attempts to put an American astronaut into space to Apollo 11's successful Moon landing and its celebrated final splashdown in the Pacific Ocean. Packed with awe-inspiring photographs of the space missions, astronauts, and iconic views of the Earth and the Moon, as well as technical diagrams, flight plans, and tables of statistics, The Apollo Missions tells the thrilling story of the race to the Moon.

One Giant Leap Simon and Schuster

Recreates the experiences of Neil Armstrong and Buzz Aldrin as they approach, land, and walk on the Moon, plant the American flag, collect rocks, take pictures, and finally lift off, reconnecting with their space ship, the Columbia.

One Small Step Routledge

On July 20, 1969, as a worldwide television audience of 500 million watched, Neil Armstrong became the first man to step foot on the Moon. Nearly a half-century later, Armstrong's words still resonate: "That's one small step for man, one giant leap for mankind." The historic Space Race began with the Soviet Union launching the world's first orbiting satellite, Sputnik, on October 4, 1957 and ended with the successful Apollo 11 mission. While the Space Race is commonly remembered as a time of innovation and technological advances, powerful, yet often overlooked forces, were at play. Politics and money were among the prime catalysts of space exploration. While history was being made and new heroes were discovered, the aerospace industry reaped enormous profits and political careers blossomed. "The Eagle Has Landed: The Story of Apollo 11" chronicles the triumphs and tragedies of America's quest to land on the Moon, beginning with the stories of the visionaries who made space exploring a reality. It is

remarkable story of political gamesmanship, innovation, perseverance, and courage.

LIFE Neil Armstrong Gareth Stevens Publishing LLLP

On July 20, 1969, Neil Armstrong took "one small step for man, one giant leap for mankind" when the Apollo 11 landed on the moon. But it wasn't just one man who got us to the moon. Rocket to the Moon! explores the people and technology that made the moon landing possible. Instead of examining one person's life, it focuses on the moon landing itself, showing the events leading up to it and how it changed the world. The book takes readers through the history of rocket building: from ancient Chinese rockets, to "bombs bursting in air" during the War of 1812, to Russia's Sputnik program, to the moon landing. Beautifully illustrated and well-researched, this book is the perfect resource for curious readers and tomorrow's scientists. It includes a timeline of space travel, a bibliography, and an index.

One Small Step for Man, One Giant Leap for Mankind July 20th 1969 Flash Point

Learn about the early years of the first person to step foot on the moon, a historic feat he described as "one small step for man, one giant leap for mankind."
